

QUICK GUIDE

STANDARD FIREPLACE

24" Fireplace requires 30lbs of Fireglass

Based off an average 24" fireplace with 2" of Fireglass.

30" Fireplace requires 40lbs of Fireglass

Based off an average 30" fireplace with 2" of Fireglass.

36" Fireplace requires 55lbs of Fireglass

Based off an average 36" fireplace with 2" of Fireglass.

48" Fireplace requires 105lbs of Fireglass

Based off an average 42" fireplace with 2" of Fireglass.

Fireplace Formula: Take the front & back width of your Fireplace and add them together... Then divide that number by 2... Now times that number by the depth of the fireplace and then times it by the depth of the Fireglass you would like... Divide that by 231... Then times it by 12 for the total pounds of Fireglass needed.

ROUND FIRE PIT

24" Fire pit requires 50lbs of Fireglass

Based off an average 24" Diameter fire pit with 2" of Fireglass.

30" Fire pit requires 75lbs of Fireglass

Based off an average 30" Diameter fire pit with 2" of Fireglass.

36" Fire pit requires 110lbs of Fireglass

Based off an average 36" Diameter fire pit with 2" of Fireglass.

48" Fire pit requires 190lbs of Fireglass

Based off an average 48" Diameter fire pit with 2" of Fireglass.

Fire Pit Formula: Take the diameter of your fire pit and times it by itself... Then times that by the depth of the glass you would like... Divide that number by 231... Then times it by 0.8 and then again by 12 to get the total pounds of Fireglass needed.

A common question we get, is what size burner should I use. To answer that question you should always check your local codes and the (MFG) specification on the burner system you are using. A rough rule is to keep a 3" to 4" gap between the burner and the side of your Fireplace or Fire Pit. Please also keep in mind that your Gas or Propane burner will produce a flame about 2" away from the burner, so an 18" burner is more like a 20" burner.

Visit www.americanfireglass.com for calculator page and more Fireglass information.
