Safety Cautions SiUS121827E

#### 1. Safety Cautions

Be sure to read the following safety cautions before conducting repair work.

After the repair work is complete, be sure to conduct a test operation to ensure that the equipment operates normally, and explain the cautions for operating the product to the customer.

This manual is for the person in charge of maintenance and inspection.

#### **Caution Items**

The caution items are classified into **Warning** and **Caution**. The **Warning** items are especially important since death or serious injury can result if they are not followed closely. The **Caution** items can also lead to serious accidents under some conditions if they are not followed. Therefore, be sure to observe all the safety caution items described below.

#### **Pictograms**

igtriangle This symbol indicates an item for which caution must be exercised.

The pictogram shows the item to which attention must be paid.

This symbol indicates a prohibited action.

The prohibited item or action is shown in the illustration or near the symbol.

This symbol indicates an action that must be taken, or an instruction.

The instruction is shown in the illustration or near the symbol.

#### 1.1 Warnings and Cautions Regarding Safety of Workers

<b>Warning</b>	
Do not store equipment in a room with fire sources (e.g., naked flames, gas appliances, electric heaters).	$\bigcirc$
Be sure to disconnect the power cable from the socket before disassembling equipment for repair.  Working on equipment that is connected to the power supply may cause an electrical shock.  If it is necessary to supply power to the equipment to conduct the repair or inspect the circuits, do not touch any electrically charged sections of the equipment.	8-6
If refrigerant gas is discharged during repair work, do not touch the discharged refrigerant gas.  Refrigerant gas may cause frostbite.	$\bigcirc$
When disconnecting the suction or discharge pipe of the compressor at the welded section, evacuate the refrigerant gas completely at a well-ventilated place first.  If there is gas remaining inside the compressor, the refrigerant gas or refrigerating machine oil discharges when the pipe is disconnected, and it may cause injury.	0
If refrigerant gas leaks during repair work, ventilate the area. Refrigerant gas may generate toxic gases when it contacts flames.	0

SiUS121827E Safety Cautions

<u> </u>	
Be sure to discharge the capacitor completely before conducting repair work.  The step-up capacitor supplies high-voltage electricity to the electrical components of the outdoor unit.  A charged capacitor may cause an electrical shock.	4
Do not turn the air conditioner on or off by plugging in or unplugging the power cable.  Plugging in or unplugging the power cable to operate the equipment may cause an electrical shock or fire.	$\bigcirc$
Be sure to wear a safety helmet, gloves, and a safety belt when working in a high place (more than 2 m (6.5 ft)). Insufficient safety measures may cause a fall.	$\bigcirc$
In case of R-32 / R-410A refrigerant models, be sure to use pipes, flare nuts and tools intended for the exclusive use with the R-32 / R-410A refrigerant.  The use of materials for R-22 refrigerant models may cause a serious accident, such as a damage of refrigerant cycle or equipment failure.	$\bigcirc$
Do not mix air or gas other than the specified refrigerant (R-32 / R-410A / R-22) in the refrigerant system.  If air enters the refrigerant system, an excessively high pressure results, causing equipment damage and injury.	$\bigcirc$

<u>İ</u> Caution	
Do not repair electrical components with wet hands.  Working on the equipment with wet hands may cause an electrical shock.	
Do not clean the air conditioner with water. Washing the unit with water may cause an electrical shock.	
Be sure to provide an earth / grounding when repairing the equipment in a humid or wet place, to avoid electrical shocks.	
Be sure to turn off the power switch and unplug the power cable when cleaning the equipment.  The internal fan rotates at a high speed, and may cause injury.	8-5
Be sure to conduct repair work with appropriate tools. The use of inappropriate tools may cause injury.	0

Safety Cautions SiUS121827E

<u>İ</u> Caution	
Be sure to check that the refrigerating cycle section has cooled down enough before conducting repair work.  Working on the unit when the refrigerating cycle section is hot may cause burns.	0
Conduct welding work in a well-ventilated place. Using the welder in an enclosed room may cause oxygen deficiency.	0

### 1.2 Warnings and Cautions Regarding Safety of Users

<u>(</u> ] Warning	
Do not store the equipment in a room with fire sources (e.g., naked flames, gas appliances, electric heaters).	$\bigcirc$
Be sure to use parts listed in the service parts list of the applicable model and appropriate tools to conduct repair work. Never attempt to modify the equipment.  The use of inappropriate parts or tools may cause an electrical shock, excessive heat generation or fire.	0
If the power cable and lead wires are scratched or have deteriorated, be sure to replace them.  Damaged cable and wires may cause an electrical shock, excessive heat generation or fire.	0
Do not use a joined power cable or extension cable, or share the same power outlet with other electrical appliances, since it may cause an electrical shock, excessive heat generation or fire.	$\bigcirc$
Be sure to use an exclusive power circuit for the equipment, and follow the local technical standards related to the electrical equipment, the internal wiring regulations, and the instruction manual for installation when conducting electrical work.  Insufficient power circuit capacity and improper electrical work may cause an electrical shock or fire.	0
Be sure to use the specified cable for wiring between the indoor and outdoor units.  Make the connections securely and route the cable properly so that there is no force pulling the cable at the connection terminals.  Improper connections may cause excessive heat generation or fire.	0
When wiring between the indoor and outdoor units, make sure that the terminal cover does not lift off or dismount because of the cable. If the cover is not mounted properly, the terminal connection section may cause an electrical shock, excessive heat generation or fire.	0
Do not damage or modify the power cable.  Damaged or modified power cables may cause an electrical shock or fire.  Placing heavy items on the power cable, or heating or pulling the power cable may damage it.	$\bigcirc$

SiUS121827E Safety Cautions

<u>İ</u> Warning	
Do not mix air or gas other than the specified refrigerant (R-32 / R-410A / R-22) in the refrigerant system.  If air enters the refrigerant system, an excessively high pressure results, causing equipment damage and injury.	
If the refrigerant gas leaks, be sure to locate the leaking point and repair it before charging the refrigerant. After charging the refrigerant, make sure that there is no leak.  If the leaking point cannot be located and the repair work must be stopped, be sure to pump-down, and close the service valve, to prevent refrigerant gas from leaking into the room. Refrigerant gas itself is harmless, but it may generate toxic gases when it contacts flames, such as those from fan type and other heaters, stoves and ranges.	0
When relocating the equipment, make sure that the new installation site has sufficient strength to withstand the weight of the equipment.  If the installation site does not have sufficient strength or the installation work is not conducted securely, the equipment may fall and cause injury.	0
Check to make sure that the power cable plug is not dirty or loose, then insert the plug into a power outlet securely. If the plug is dusty or has a loose connection, it may cause an electrical shock or fire.	0
When replacing the coin battery in the remote controller, be sure to dispose of the old battery to prevent children from swallowing it. If a child swallows the coin battery, see a doctor immediately.	0

<u>İ</u> Caution	<b>Caution</b>					
Installation of a leakage breaker is necessary in some cases depending on the conditions of the installation site, to prevent electrical shocks.	0					
Do not install the equipment in a place where there is a possibility of combustible gas leaks.  If combustible gas leaks and remains around the unit, it may cause a fire.						
Check to see if parts and wires are mounted and connected properly, and if connections at the soldered or crimped terminals are secure.  Improper installation and connections may cause excessive heat generation, fire or an electrical shock.	0					
If the installation platform or frame has corroded, replace it. A corroded installation platform or frame may cause the unit to fall, resulting in injury.	0					
Check the earth / grounding, and repair it if the equipment is not properly earthed / grounded. Improper earth / grounding may cause an electrical shock.						

Safety Cautions SiUS121827E

<u> </u>				
Be sure to measure insulation resistance after the repair, and make sure that the resistance is 1 M $\Omega$ or higher. Faulty insulation may cause an electrical shock.	0			
Be sure to check the drainage of the indoor unit after the repair. Faulty drainage may cause water to enter the room and wet the furniture and floor.	0			
Do not tilt the unit when removing it.  The water inside the unit may spill and wet the furniture and floor.	0			

SiUS121827E Icons Used

#### 2. Icons Used

The following icons are used to attract the attention of the reader to specific information.

Icon	Type of Information	Description
Warning	Warning	Warning is used when there is danger of personal injury.
Caution	Caution	<b>Caution</b> is used when there is danger that the reader, through incorrect manipulation, may damage equipment, lose data, get an unexpected result or have to restart (part of) a procedure.
Note	Note	<b>Note</b> provides information that is not indispensable, but may nevertheless be valuable to the reader, such as tips and tricks.
Reference	Reference	<b>Reference</b> guides the reader to other places in this binder or in this manual, where he/she will find additional information on a specific topic.

Notes			SL: The quiet fan level of the airflow rate setting.     The operating sound is based on the rear side suction inlet and the external static pressure 0.16 inH <sub>2</sub> O (40 Pa). Operating sound for bottom suction inlet: [operating sound for rear side suction inlet] +5 dB. However, when installation resulting in lower external static pressure becomes low is carried out, the operation sound may rise by more than 5 dB.

SiUS121827E Common Functions

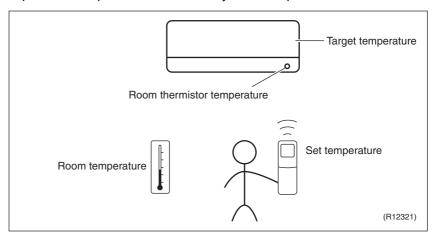

#### 1. Common Functions

### 1.1 Temperature Control

#### Definitions of Temperatures

The definitions of temperatures are classified as following.

- Room temperature: temperature of lower part of the room
- Set temperature: temperature set by remote controller
- Room thermistor temperature: temperature detected by room temperature thermistor
- Target temperature: temperature determined by microcomputer

★ The illustration is for wall mounted type as representative.

# Temperature Control

The temperature of the room is detected by the room temperature thermistor. However, there is a difference between the temperature detected by room temperature thermistor and the temperature of lower part of the room, depending on the type of the indoor unit or installation condition. In practice, the temperature control is done by the target temperature appropriately adjusted for the indoor unit and the temperature detected by room temperature thermistor.

# 1.2 Frequency Principle

# Control Parameters

The frequency of the compressor is controlled by the following 2 parameters:

- The load condition of the operating indoor unit
- The difference between the room thermistor temperature and the target temperature

The target frequency is adapted by additional parameters in the following cases:

- Frequency restrictions
- Initial settings
- Forced cooling operation

#### **Inverter Principle**

To regulate the capacity, a frequency control is needed. The inverter makes it possible to control the rotation speed of the compressor. The followings explain the inverter principle:

#### Phase 1

The supplied AC power source is converted into the DC power source for the present.

#### Phase 2

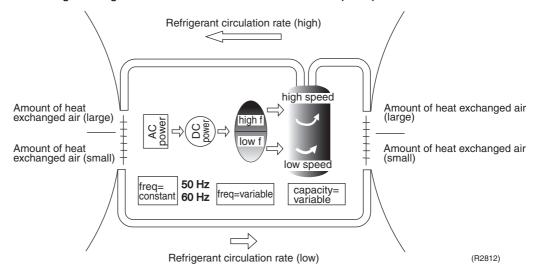

The DC power source is reconverted into the three phase AC power source with variable frequency.

Common Functions SiUS121827E

■ When the frequency increases, the rotation speed of the compressor increases resulting in an increase of refrigerant circulation. This leads to a larger amount of heat exchange per unit.

■ When the frequency decreases, the rotation speed of the compressor decreases resulting in a decrease of refrigerant circulation. This leads to a smaller amount of heat exchange per unit.

The following drawing shows a schematic view of the inverter principle:

#### **Inverter Features**

The inverter provides the following features:

- The regulating capacity can be changed according to the changes in the outdoor temperature and cooling/heating load.
- Quick heating and quick cooling The rotation speed of the compressor is increased when starting the heating (cooling). This enables to reach the set temperature quickly.
- Even during extreme cold weather, high capacity is achieved. It is maintained even when the outdoor temperature is 2°C (35.6°F).
- Comfortable air conditioning
   A fine adjustment is integrated to keep the room temperature constant.
- Energy saving heating and cooling Once the set temperature is reached, the energy saving operation enables to maintain the room temperature at low power.

#### **Frequency Limits**

The following functions regulate the minimum and maximum frequency:

#### Low frequency

■ Four way valve operation compensation. Refer to page 107.

#### **High frequency**

- Compressor protection function. Refer to page 108.
- Discharge pipe temperature control. Refer to page 109.
- Input current control. Refer to page 110.
- Freeze-up protection control. Refer to page 111.
- Heating peak-cut control. Refer to page 113.
- Defrost control. Refer to page 114.

# Forced Cooling Operation

Refer to page 248 for details.

SiUS121827E RA Indoor Unit Functions

# 2. RA Indoor Unit Functions

#### 2.1 Airflow Direction Control

Applicable Models

FTXR09/12/18TVJUW(S) CTXG09/12/18QVJUW(S)

CTXS07LVJU

FTXS09/12/15/18/24LVJU FVXS09/12/15/18NVJU

Power-Airflow (Dual) Flap(s)

The large flap sends a large volume of air downward to the floor and provides an optimum control in cooling, dry and heating operation.

#### Cooling/Dry

During cooling or dry operation, the flap retracts into the indoor unit. Then, cool air can be blown far and distributed all over the room.

#### Heating

During heating operation, the large flap directs airflow downward to spread the warm air to the entire room.

Wide-Angle Louvers

The louvers, made of elastic synthetic resin, provide a wide range of airflow that guarantees comfortable air distribution.

**Auto-Swing** 

The following tables explain the auto-swing process for cooling, dry, heating and fan:

#### FTXR, CTXG series

	Flap (up and down)		Louver	
	Cooling/Dry	Heating	Fan	(right and left)
09/12/18 class	30° (R23915)	30° 65° (R23916)	25° 50° (R21084)	35° 35° (R21085)

#### CTXS, FTXS series

	Flap (up and down)			Louver
	Cooling/Dry	Heating	Fan	(right and left)
07/09/12 class	15° 35° 45° 55° (R13527)	30° 30° 65° (R11402)	5° 30° 65° 80° (R11403)	(R11404)
15/18/24 class	15° 25° 60° (R9303)	30° /40° 75° 70° (R9304)	15° 75° 70° (R9305)	(R9306)

RA Indoor Unit Functions SiUS121827E

#### **FVXS** series

	Flap (up and down)		
	Cooling/Dry	Heating	
Upward airflow limit OFF	\$2°	.00 40°	
	R4003397	R4003396	
Upward airflow limit ON	000000000000000000000000000000000000000	200	
	R4003394	R4003394	

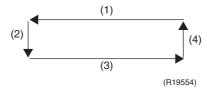

#### 3-D Airflow

#### FTXR, CTXG, CTXS, FTXS Series

Alternative repetition of vertical and horizontal swing motions enables uniform air-conditioning of the entire room.

When the horizontal swing and vertical swing are both set to automatic operation, the airflow becomes 3-D airflow. The horizontal and vertical swing motions are alternated and the airflow direction changes in the order shown in the following diagram.

- (1): The vertical blades (louvers) move from the right to the left.
- (2): The horizontal blades (flaps) move downward.
- (3): The vertical blades (louvers) move from the left to the right.
- (4): The horizontal blades (flaps) move upward.

#### COMFORT AIRFLOW Operation

#### FTXR, CTXG, CTXS, FTXS Series

The flaps are controlled not to blow the air directly at the people in the room.

The airflow will be in the upward direction while in cooling operation and in the downward direction while in heating operation, which will provide a comfortable wind that will not come in direct contact with people.

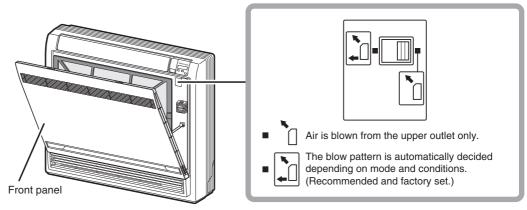

SiUS121827E RA Indoor Unit Functions

# Airflow Selection Setting

#### **FVXS Series**

Airflow direction can be set with the airflow selection switch.

Open the front panel.

(R17866)

Before opening the front panel, be sure to stop the operation and turn the breaker off. Do not touch the aluminum fins (indoor heat exchanger) inside the indoor unit, as it may result in injury.

# When setting the airflow selection switch to

■ The air conditioner automatically decides the appropriate blowing pattern depending on the operating mode/situation.

Operating mode	Situation	Blowing pattern
Cooling operation	When the room has become fully cool, or when 1 hour has passed since turning on the air conditioner.	Air is blown from the upper air outlet, so that air does not come into direct contact with people, and room temperature is equalized.
	At the start of operation or when the room is not fully cooled.	
Heating operation	Normal time	Air is blown from the upper and lower air outlets for high speed cooling during cooling operation, and for filling the room with warm air during heating operation.
	At the start or when air temperature is low.	Air is blown from the upper air outlet, so that air does not come into direct contact with people.

 During dry operation, air is blown from upper air outlet, so that cold air does not come into direct contact with people.

# 

- Regardless of the operating mode or situation, air is blown from the upper air outlet.
- Use this switch when you do not want air coming out of the lower air outlet (e.g., while sleeping).

RA Indoor Unit Functions SiUS121827E

### 2.2 Fan Speed Control for Indoor Unit

**Outline** 

Phase control and fan speed control contains 9 steps: LLL, LL, SL, L, ML, M, MH, H, and HH. The airflow rate can be automatically controlled depending on the difference between the room thermistor temperature and the target temperature.

Automatic Fan Speed Control In automatic fan speed operation, the step SL is not available.

Step	Cooling	Heating
LLL		
LL		4
L	$\uparrow$	
ML	7	
M	] []	
MH	7	7
Н		
HH (POWERFUL)		

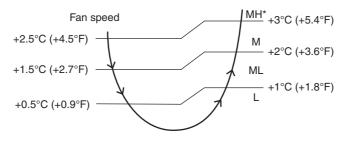

R400351

= The airflow rate is automatically controlled within this range when **FAN** setting button is set to <u>automatic</u>.

#### ■ Cooling

The following drawing explains the principle of fan speed control for cooling.

Room thermistor temperature - target temperature

(R21654)

\* The upper limit is at M tap in 30 minutes from the operation start.

#### ■ Heating

In heating operation, the fan speed is regulated according to the indoor heat exchanger temperature and the difference between the room thermistor temperature and the target temperature.

The fan stops during defrost operation.

# COMFORT AIRFLOW Operation

#### FTXR, CTXG, CTXS, FTXS Series

The fan speed is controlled automatically within the following steps.

#### Cooling

L tap ~ MH tap (same as AUTOMATIC)

#### Heating

In order to obtain a comfortable airflow, the fan speed may be set to a rate different from automatic fan speed control.

■ The latest command has the priority between POWERFUL and COMFORT AIRFLOW.

SiUS121827E RA Indoor Unit Functions

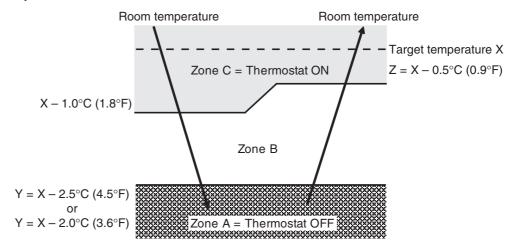

## 2.3 Program Dry Operation

**Outline** 

Program dry operation removes humidity while preventing the room temperature from lowering. Since the microcomputer controls both the temperature and airflow rate, the temperature adjustment and **FAN** setting buttons are inoperable.

**Details** 

The microcomputer automatically sets the temperature and airflow rate. The difference between the room thermistor temperature at start-up and the target temperature is divided into two zones. Then, the unit operates in an appropriate capacity for each zone to maintain the temperature and humidity at a comfortable level.

(R24029)

Room thermistor temperature at start-up	Target temperature X	Thermostat OFF point Y	Thermostat ON point Z ★
24°C or more	Room thermistor	X – 2.5°C	X – 0.5°C
(75.2°F or more)		(X – 4.5°F)	(X – 0.9°F)
18 ~ 23.5°C	temperature at start-up	X – 2.0°C	X – 0.5°C
(64.4 ~ 74.3°F)		(X – 3.6°F)	(X – 0.9°F)
17.5°C or less	18°C	X – 2.0°C	$X - 0.5^{\circ}C = 17.5^{\circ}C$
(63.5°F or less)	(64.4°F)	(X – 3.6°F)	$(X - 0.9^{\circ}F = 63.5^{\circ}F)$

<sup>★</sup> Thermostat turns on also when the room temperature is in the zone B for 10 minutes.

RA Indoor Unit Functions SiUS121827E

### 2.4 Automatic Cooling/Heating Changeover

#### **Outline**

When the automatic operation is selected with the remote controller, the microcomputer automatically determines the operation mode as cooling or heating according to the room temperature and the set temperature at start-up.

The unit automatically switches the operation mode to maintain the room temperature at the set temperature.

#### **Details**

Ts: set temperature (set by remote controller)

Tt: target temperature (determined by microcomputer)

Tr: room thermistor temperature (detected by room temperature thermistor)

C: correction value

1. The set temperature (Ts) determines the target temperature (Tt).

 $(Ts = 18 \sim 30^{\circ}C (64.4 \sim 86^{\circ}F))$ 

2. The target temperature (Tt) is calculated as;

Tt = Ts + C

where C is the correction value.

 $C = 0^{\circ}C (0^{\circ}F)$ 

- 3. Thermostat ON/OFF point and operation mode switching point are as follows.
  - (1) Heating → Cooling switching point:

Tr ≥ Tt + 3.0°C (+ 5.4°F) (FTXR, CTXG, CTXS, FTXS series)

 $Tr \ge Tt + 2.5^{\circ}C (+ 4.5^{\circ}F) (FDXS, CDXS, FVXS series)$ 

(2) Cooling → Heating switching point:

Tr < Tt - 2.5°C (- 4.5°F) (FTXR, CTXG series)

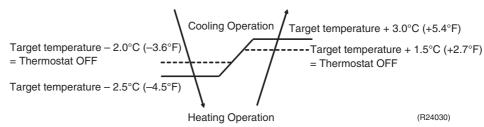

Tr < Tt - 3.0°C (- 5.4°F) (CTXS, FTXS, FDXS, CDXS, FVXS series)

- (3) Thermostat ON/OFF point is the same as the ON/OFF point of cooling or heating operation.
- 4. During initial operation

Tr ≥ Ts : Cooling operation

Tr < Ts: Heating operation

#### FTXR, CTXG Series

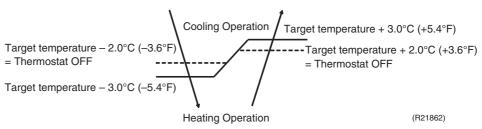

Ex: When the target temperature is 25°C (77°F)

Cooling  $\rightarrow$  23°C (73.4°F): Thermostat OFF  $\rightarrow$  22.5°C (72.5°F): Switch to heating

Heating  $\rightarrow$  26.5°C (79.7°F): Thermostat OFF  $\rightarrow$  28°C (82.4°F): Switch to cooling

#### CTXS, FTXS Series

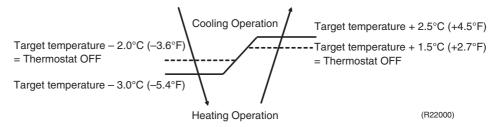

Ex: When the target temperature is 25°C (77°F)

Cooling  $\rightarrow$  23°C (73.4°F): Thermostat OFF  $\rightarrow$  22°C (71.6°F): Switch to heating

Heating → 27°C (80.6°F): Thermostat OFF → 28°C (82.4°F): Switch to cooling

66

## FDXS, CDXS, FVXS Series

Ex: When the target temperature is 25°C (77°F)

Cooling  $\rightarrow$  23°C (73.4°F): Thermostat OFF  $\rightarrow$  22°C (71.6°F): Switch to heating

Heating  $\rightarrow$  26.5°C (79.7°F): Thermostat OFF  $\rightarrow$  27.5°C (81.5°F): Switch to cooling

# 2.5 Thermostat Control

## **Outline**

Thermostat control is based on the difference between the room thermistor temperature and the target temperature.

## **Details**

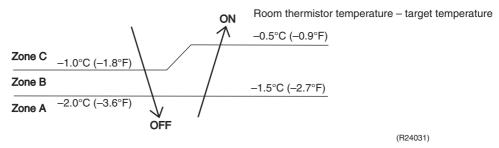

#### **Thermostat OFF Conditions**

■ The temperature difference is in the zone A.

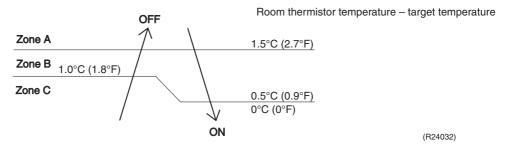

## **Thermostat ON Conditions**

- The temperature difference returns to the zone C after being in the zone A.
- The system resumes from defrost control in any zones except A.
- The operation turns on in any zones except A.
- The monitoring time has passed while the temperature difference is in the zone B. (Cooling: 10 minutes, Heating: 10 seconds)

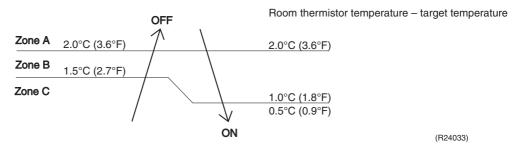

#### Cooling

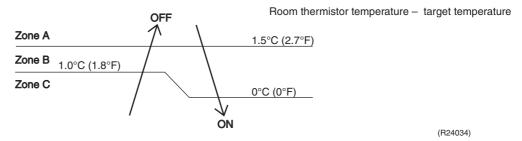

# Heating FTXR, CTXG Series

## CTXS, FTXS Series

# FDXS, CDXS, FVXS Series

Refer to Temperature Control on page 59 for details.

# 2.6 NIGHT SET Mode

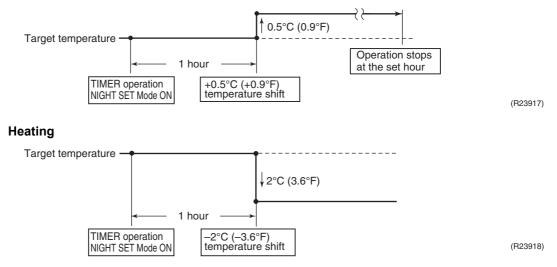

# Outline

When the OFF TIMER is set, NIGHT SET mode is automatically activated. NIGHT SET mode keeps the airflow rate setting.

#### **Details**

NIGHT SET mode continues operation at the target temperature for the first one hour, then automatically raises the target temperature slightly in the case of cooling, or lowers the target temperature slightly in the case of heating. This prevents excessive cooling in summer and excessive heating in winter to ensure comfortable sleeping conditions, and also conserves electricity.

## Cooling

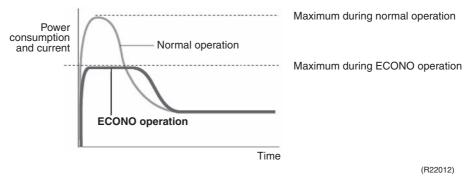

# 2.7 ECONO Operation

# **Outline**

ECONO operation reduces the maximum operating current and the power consumption. This operation is particularly convenient for energy-saving. It is also a major bonus when breaker capacity does not allow the use of multiple electrical devices and air conditioners. It can be easily activated by pressing **ECONO** button on the wireless remote controller.

## **Details**

- When this function is activated, the maximum capacity also decreases.
- The remote controller can send the ECONO command when the unit is in cooling, heating, dry, or automatic operation. This function can only be set when the unit is running. Pressing **ON/OFF** button on the remote controller cancels the function.
- This function and POWERFUL operation cannot be used at the same time. The latest command has the priority.

# 2.8 2-Area INTELLIGENT EYE Operation

# Applicable Models

FTXR09/12/18TVJUW(S) CTXG09/12/18QVJUW(S)

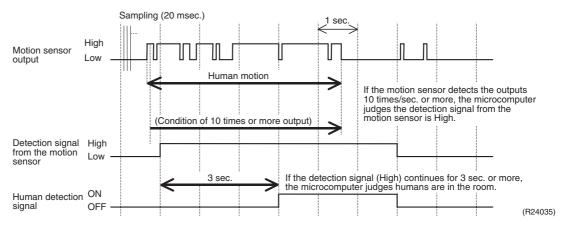

#### **Outline**

The following functions can be performed by the microcomputer and a motion sensor.

- 1. Reduction of the capacity when there is nobody in the room in order to save electricity (energy saving operation)
- 2. Dividing the room into plural areas and detecting presence of humans in each area. Moving the airflow direction to the area with no human automatically to avoid direct airflow on humans.

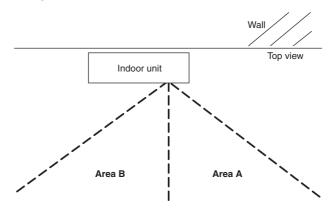

## **Details**

## 1. INTELLIGENT EYE detection method

- The motion sensor detects human motion by receiving infrared rays and sends the pulse wave output.
- The microcomputer in the indoor unit carries out a sampling every 20 msec. If the motion sensor detects 10 times or more of the wave output in one second in total, and the High signal continues for 3 sec., the microcomputer judges humans are in the room as the human detection signal is ON.
- 2-area INTELLIGENT EYE motion sensor divides the area into 2 and detects presence of humans in each area.

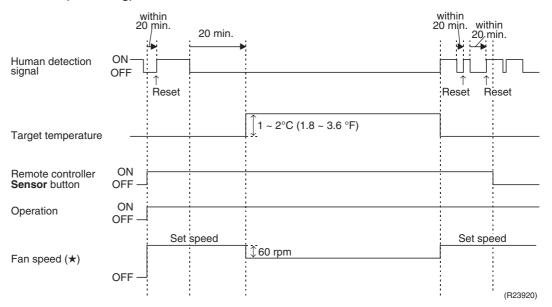

## **Image of 2-area INTELLIGENT EYE**

A microcomputer judges human presence by the human detection signal from each area A and B.

(R22951)

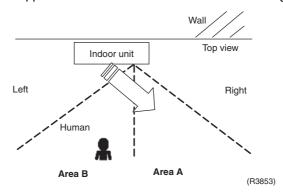

# 2. Motions (in cooling)

- ★ In FAN operation, the fan speed is reduced by 60 rpm when no one is in the area.
- When there is no signal from the motion sensor in 20 minutes, the microcomputer judges that nobody is in the room and operates the unit at a temperature shifted from the target temperature. (Cooling/Dry: 1 ~ 2°C (1.8 ~ 3.6°F) higher, Heating: 2°C (3.6°F) lower, Auto: according to the operation mode at that time)

# 3. Airflow direction in 2-area INTELLIGENT EYE operation

■ Detection method: The opposite area of detected area is set as the target direction.

- 1. Human detection signal ON in both areas A and B: Shift the airflow direction to area B (left side)
- 2. Human detection signal ON in area A: Shift the airflow direction to area B (left side)
- 3. Human detection signal ON in area B: Shift the airflow direction to area A (right side)
- 4. Human detection signal OFF in both areas A and B: No change
- \* When the human detection signal is OFF for 20 minutes in both areas A and B, the unit starts energy saving operation.

For dry operation, the temperature cannot be set with a remote controller, but the target temperature is shifted internally.

# 2.9 INTELLIGENT EYE Operation

Applicable Models

CTXS07LVJU

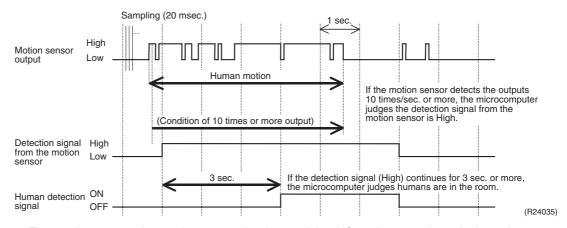

FTXS09/12/15/18/24LVJU

**Outline** 

The microcomputer detects the presence of humans in the room with a motion sensor and reduces the capacity when there is nobody in the room in order to save electricity.

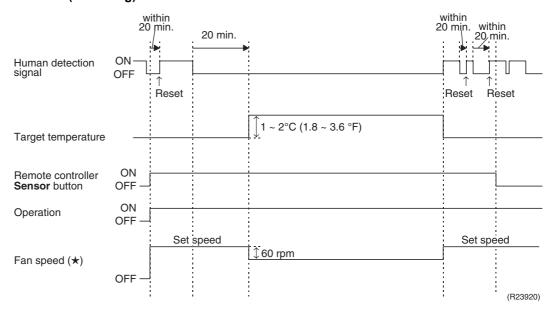

#### **Details**

#### 1. INTELLIGENT EYE detection method

- The motion sensor detects human motion by receiving infrared rays and sends the pulse wave output.
- The microcomputer in the indoor unit carries out a sampling every 20 msec. If the motion sensor detects 10 times or more of the wave output in one second in total, and the High signal continues for 3 sec., the microcomputer judges humans are in the room as the human detection signal is ON.

# 2. Motions (in cooling)

- ★ In FAN operation, the fan speed is reduced by 60 rpm when no one is in the area.
- When there is no signal from the motion sensor in 20 minutes, the microcomputer judges that nobody is in the room and operates the unit at a temperature shifted from the target temperature. (Cooling/Dry: 1 ~ 2°C (1.8 ~ 3.6°F) higher, Heating: 2°C (3.6°F) lower, Auto: according to the operation mode at that time)

For dry operation, the temperature cannot be set with a remote controller, but the target temperature is shifted internally.

# 2.10 POWERFUL Operation

**Outline** 

In order to exploit the cooling and heating capacity to full extent, the air conditioner can be operated by increasing the indoor fan rotating speed and the compressor frequency.

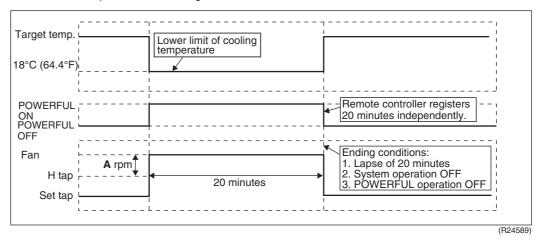

**Details** 

When **POWERFUL** button is pressed, the fan speed and target temperature are converted to the following states for 20 minutes.

Operation mode	Fan speed	Target temperature	
COOL	H tap + <b>A</b> rpm	18°C (64.4°F)	
DRY	Dry rotating speed + A rpm	Lowered by 2 ~ 2.5°C (3.6 ~ 4.5°F)	
HEAT	H tap + <b>A</b> rpm	30 ~ 31.5°C (86 ~ 88.7°F)	
FAN	H tap + A rpm	_	
AUTO	Same as cooling/heating in POWERFUL operation	The target temperature is kept unchanged.	

 $A = 50 \sim 90 \text{ rpm (depending on the model)}$ 

## Ex: POWERFUL operation in cooling

Note(s)

- During POWERFUL operation, the cooling/heating efficiency of the other rooms may be slightly reduced.
- POWERFUL operation cannot be used together with ECONO, COMFORT AIRFLOW or OUTDOOR UNIT QUIET operation.

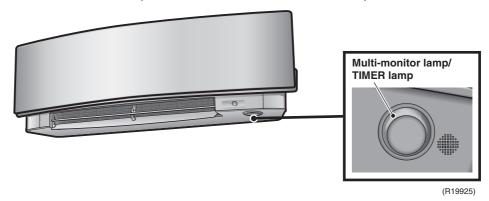

# 2.11 Multi-Monitor Lamp/TIMER Lamp

Applicable Models

FTXR09/12/18TVJUW(S) CTXG09/12/18QVJUW(S)

## **Features**

Current operation mode is displayed in color of the lamp of the indoor unit. Operating status can be monitored even in automatic operation in accordance with the actual operation mode.

The lamp color changes according to the operation.

* AUTO	Red/Blue
* DRY	Green
* COOL	Blue
* HEAT	Red
* FAN	White
* TIMER	Orange

# Brightness Setting

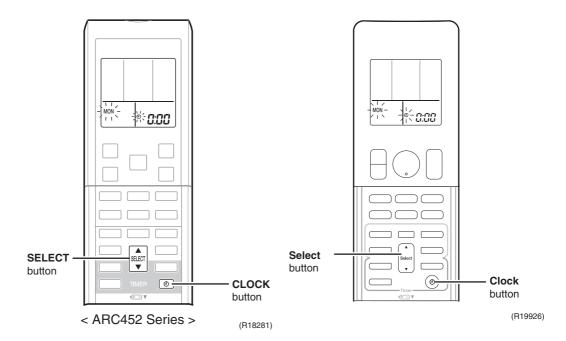

Each time **Brightness** button on the remote controller is pressed, the brightness of the multimonitor lamp changes to high, low, or off.

# 2.12 Clock Setting

# ARC452 Series ARC466 Series

The clock can be set by taking the following steps:

- 1. Press CLOCK button.
  - $\rightarrow \vec{U}: \vec{U}\vec{U}$  is displayed, then **MON** and blink.
- 2. Press **SELECT** ▲ or **SELECT** ▼ button to set the clock to the current day of the week.
- 3. Press **CLOCK** button.
  - $\rightarrow$  (4) blinks.
- 4. Press **SELECT** ▲ or **SELECT** ▼ button to set the clock to the present time. Holding down **SELECT** ▲ or **SELECT** ▼ button rapidly increases or decreases the time display.
- 5. Press **CLOCK** button to set the clock. Point the remote controller at the indoor unit when pressing the button.
  - → blinks and clock setting is completed.

# 2.13 WEEKLY TIMER Operation

**Applicable** FTXR09/12/18TVJUW(S) **Models** CTXG09/12/18QVJUW(S)

**Details** 

CTXS07LVJU

FTXS09/12/15/18/24LVJU FVXS09/12/15/18NVJU

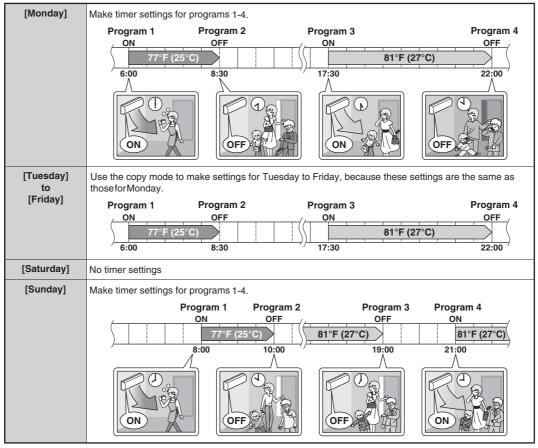

Outline Up to 4 timer settings can be saved for each day of the week (up to 28 settings in total).

The 3 items: ON/OFF, temperature, and time can be set.

★ The illustrations are for FTXR and CTXG series as representative.

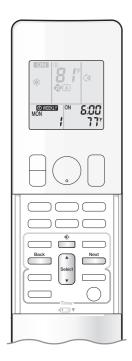

# **Setting example of the WEEKLY TIMER**

The same timer settings are used from Monday through Friday, while different timer settings are used for the weekend.

- Up to 4 reservations per day and 28 reservations per week can be set using the WEEKLY TIMER. The effective use of the copy mode simplifies timer programming.
- The use of ON-ON-ON settings, for example, makes it possible to schedule operating mode and set temperature changes. Furthermore, by using OFF-OFF-OFF settings, only the turn off time of each day can be set. This will turn off the air conditioner automatically if you forget to turn it off.

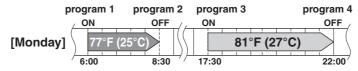

R4003381

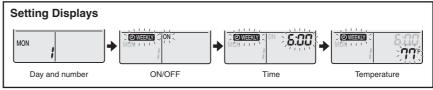

# To use WEEKLY TIMER operation

# **Setting mode**

• Make sure the day of the week and time are set. If not, set the day of the week and time.

# **1.** Press 📥 .

- The day of the week and the reservation number of the current day will be displayed.
- 1 to 4 settings can be made per day.

# 2. Press to select the desired day of the week and reservation number.

• Pressing solution changes the reservation number and the day of the week.

# 

- The day of the week and reservation number will be set.
- " ② WEEKLY " and " ON" blink.

# 4. Press to select the desired mode.

• Pressing changes the "ON" or " OFF" setting in sequence.

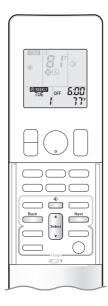

- In case the reservation has already been set, selecting "blank" deletes the reservation.
- Proceed to STEP 9 if " blank " is selected.
- To return to the day of the week and reservation number setting, press \_\_\_\_\_\_.

# **5.** Press Next

- The ON/OFF TIMER mode will be set.
- " WEEKLY " and the time blink.

R4003382

# 6. Press sto select the desired time.

- The time can be set between 0:00 and 23:50 in 10-minute intervals
- To return to the ON/OFF TIMER mode setting, press
- ullet Proceed to STEP  $oldsymbol{g}$  when setting the OFF TIMER.

# 

- The time will be set.
- " WEEKLY " and the temperature blink.

# 8. Press to select the desired temperature.

- The temperature can be set between 50°F (10°C) and 90°F (32°C).

  COOL or AUTO: The unit operates at 64°F (18°C) even if it is set at 50°F (10°C) to 63°F (17°C).

  HEAT or AUTO: The unit operates at 86°F (30°C) even if it is set at 87°F (31°C) to 90°F (32°C).
- $\bullet$  To return to the time setting, press  $\stackrel{\text{\tiny Back}}{=\!=\!=\!=}$  .
- The set temperature is only displayed when the mode setting is on.

# 9. Press Next

- Be sure to direct the remote controller toward the indoor unit and check for a receiving tone and blinking of the multi-monitor lamp.
- The multi-monitor lamp blinks twice.
- The temperature will be set and go to the next reservation.
- Temperature and time are set in the case of ON TIMER operation, and the time is set in the case of OFF TIMER operation.
- The next reservation screen will appear.
- To continue further settings, repeat the procedure from STEP 4.

# 10. Press to complete the setting.

- " " " is displayed on the LCD and WEEKLY TIMER operation is activated.
- The TIMER lamp periodically lights orange.

The multi-monitor lamp will not light orange if all the reservation settings are deleted.

Displa

 A reservation made once can be easily copied and the same settings used for another day of the week. Refer to Copy mode.

#### **NOTE**

# Notes on WEEKLY TIMER operation

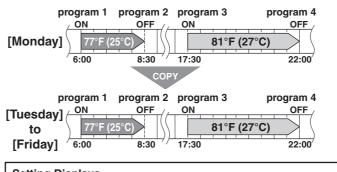

- Do not forget to set the clock on the remote controller first.
- The day of the week, ON/OFF TIMER mode, time and set temperature (only for ON TIMER mode) can be set with the WEEKLY TIMER. Other settings for the ON TIMER are based on the settings just before the operation.
- WEEKLY TIMER and ON/OFF TIMER operation cannot be used at the same time. The ON/OFF TIMER operation has priority if it is set while WEEKLY TIMER is still active. The WEEKLY TIMER will enter the standby state, and " WEEKLY " will disappear from the LCD. When the ON/OFF TIMER is up, the WEEKLY TIMER will automatically become active.
- Only the time and temperature can be set with the WEEKLY TIMER. Set the WEEKLY TIMER only after setting the operation mode, the airflow rate and the airflow direction ahead of time.
- Turning off the circuit breaker, power failure, and other similar events will render operation of the indoor unit's internal clock inaccurate. Reset the clock.
- Base
   can be used only for the time and temperature settings. It cannot be used to go back to the reservation number.

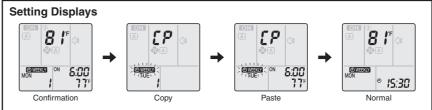

R4003383

# Copy mode

 A reservation made once can be copied to another day of the week. The whole reservation of the selected day of the week will be copied.

- **1.** Press <u>⊕</u>.
- **2.** Press to confirm the day of the week to be copied.
- 3. Press ........
  - The whole reservation of the selected day of the week will be copied.
- 4. Press to select the destination day of the week.
- - Be sure to direct the remote controller toward the indoor unit and check for a receiving tone and blinking of the multi-monitor lamp.
  - The multi-monitor lamp blinks twice.
  - The reservation will be copied to the selected day of the week. The whole reservation of the selected day of the week will be copied.
  - To continue copying the settings to other days of the week, repeat STEP 4 and STEP 5.
- 6. Press to complete the setting.
  - " " TIMER operation is activated.
  - The TIMER lamp periodically lights orange.

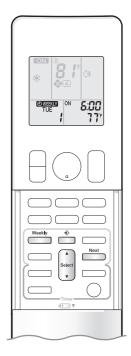

## **NOTE**

## **Note on COPY MODE**

• The entire reservation of the source day of the week is copied in the copy mode.

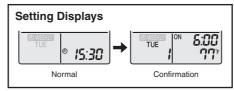

In the case of making a reservation change for any day of the week individually after copying the content of weekly reservations, press and change the settings in the steps of Setting mode.

R4003384

# Confirming a reservation

• The reservation can be confirmed.

- - The day of the week and the reservation number of the current day will be displayed.
- 2. Press to select the day of the week and the reservation number to be confirmed.
  - Pressing select displays the reservation details.
- 3. Press 

  to exit the confirmation mode.
  - " WEEKLY " is displayed on the LCD and WEEKLY TIMER operation is activated.
  - The TIMER lamp periodically lights orange.

The multi-monitor lamp will not light orange if all the reservation settings are deleted.

Display

# To deactivate WEEKLY TIMER operation

- ▶ Press while "**②W**≡KY" is displayed on the LCD.
  - " WEEKLY " disappears from the LCD.
  - The TIMER lamp goes off.
  - To reactivate the WEEKLY TIMER operation, press deckly again.
  - If a reservation deactivated with weekly is activated once again, the last reservation mode will be used.

# **NOTE**

• If not all the reservation settings are reflected, deactivate the WEEKLY TIMER operation once. Then press again to reactivate the WEEKLY TIMER operation.

R4003385

# To delete reservations

## An individual reservation

- - The day of the week and the reservation number will be displayed.
- 2. Press to select the day of the week and the reservation number to be deleted.
- 3. Press Next .......
- 4. Press until no icon is displayed.
  - $\bullet$  Pressing  $\widehat{\Big|_{\text{sect}}}$  changes the ON/OFF TIMER mode in sequence.
  - Selecting "blank" will cancel any reservation you may have.

- - The selected reservation will be deleted.
  - Be sure to direct the remote controller toward the indoor unit and check for a receiving tone and blinking of the multi-monitor lamp.
- **6.** Press ⊕.
  - If there are still other reservations, WEEKLY TIMER operation will be activated.

# Reservations for each day of the week

- This function can be used for deleting reservations for each day of the week.
- It can be used while confirming or setting reservations.
- - The day of the week and the reservation number will be displayed.
- **2.** Press (select the day of the week to be deleted.
- **3.** Hold for about 5 seconds.
  - Be sure to direct the remote controller toward the indoor unit and check for a receiving tone and blinking of the multi-monitor lamp.
  - The reservation of the selected day of the week will be deleted.
- - If there are still other reservations, WEEKLY TIMER operation will be activated.

# All reservations

# Hold for about 5 seconds with the normal display.

- Be sure to direct the remote controller toward the indoor unit and check for a receiving tone
  and blinking of the multi-monitor lamp.
- The TIMER lamp goes off.
- This operation cannot be used for the WEEKLY TIMER setting display.
- All reservations will be deleted.

R4003386

# 2.14 Other Functions

# 2.14.1 Hot-Start Function

In order to prevent the cold air blast that normally occurs when heating operation is started, the temperature of the indoor heat exchanger is detected, and the airflow is either stopped or significantly weakened resulting in comfortable heating.

The cold air blast is prevented using similar control when defrost control starts or when the thermostat is turned ON.

# 2.14.2 Signal Receiving Sign

When the indoor unit receives a signal from the remote controller, the unit emits a signal receiving sound and the operation lamp blinks.

# 2.14.3 Indoor Unit ON/OFF Switch

**ON/OFF** switch is provided on the display of the unit.

- Press **ON/OFF** switch once to start operation. Press once again to stop it.
- ON/OFF switch is useful when the remote controller is missing or the battery has run out.

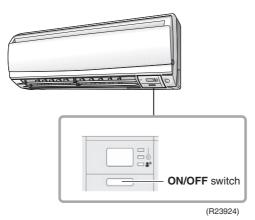

Operation mode	Temperature setting	Airflow rate
AUTO	25°C (77°F)	Automatic

■ In the case of multi system operation, there are times when the unit does not activate with **ON/ OFF** switch.

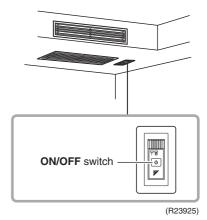

## FTXR/CTXG Series

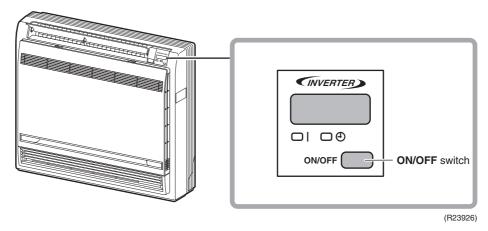

## **CTXS/FTXS Series**

**FDXS/CDXS Series** 

## **FVXS Series**

# 2.14.4 Auto-restart Function

If a power failure (even a momentary one) occurs during the operation, the system restarts automatically in the same conditions as before when the power supply is restored to the conditions prior to the power failure.

It takes 3 minutes to restart the operation because 3-minute standby function is activated.

# 3. SA Indoor Unit Functions

# 3.1 Airflow Direction Control

# Applicable Models

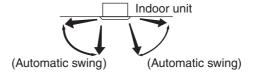

FFQ09/12/15/18Q2VJU

#### **Outline**

There are two types of airflow direction settings.

## Automatic swing setting

The flaps automatically oscillate up and down.

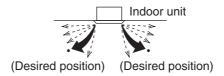

(R24069)

## Airflow direction fixed setting

You can select from one of the fixed directions.

The display of the remote controller and the actual angle of the flap do not match.

(R24070)

## **Flaps Movement**

Under the operating conditions shown below, airflow direction is controlled automatically. Actual operation may be different from what is displayed on the remote controller.

- Room temperature is higher than the remote controller's set temperature in heating operation.
- When defrosting in heating operation. The airflow is discharged horizontally to avoid blowing cold air directly on the room occupants.
- Under continuous operation with the airflow discharging horizontally.

# Individual Flap Control

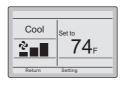

With decoration panel (BYFQ60C2W1W(S)) and wired remote controller (BRC1E73), you can control each one of the four flaps individually. The following marks are beside each air outlet: \_\_, \_\_\_, \_\_\_\_\_\_.

# 3.2 Fan Speed Control for Indoor Unit

■ With Wired Remote Controller (BRC1E73)

To change the fan speed, press **Fan Speed** button and select the fan speed from Low/Medium/ High/Auto.

- Auto cannot be selected if the indoor unit does not have Auto Fan speed function.
- The system may change the fan speed automatically for equipment protection purposes.
- The system may turn off the fan when the room temperature is satisfied.
- It is normal for a delay to occur when changing the fan speed.
- If the Auto is selected for the fan speed, the fan speed varies automatically based on the difference between set temperature and room temperature.

three fan speeds

R4003380

# ■ With Wireless Remote Controller (BRC082A43, BRC082A41W, BRC082A42W(S)) Press FAN SPEED CONTROL button.

High, Medium or Low fan speed can be selected.

The microchip may sometimes control the fan speed in order to protect the unit.

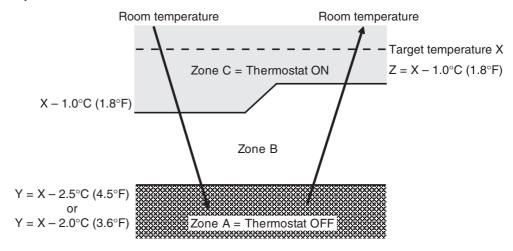

# 3.3 Program Dry Operation

**Outline** 

Program dry operation removes humidity while preventing the room temperature from lowering. Since the microcomputer controls both the temperature and airflow rate, the temperature adjustment and **FAN** setting buttons are inoperable.

**Details** 

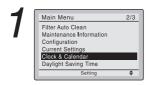

The microcomputer automatically sets the temperature and airflow rate. The difference between the room thermistor temperature at start-up and the target temperature is divided into two zones. Then, the unit operates in an appropriate capacity for each zone to maintain the temperature and humidity at a comfortable level.

(R24367)

Room thermistor temperature at start-up	Target temperature	Thermostat OFF point	Thermostat ON point
	X	Y	Z
24.5°C or more	Room thermistor	X – 2.5°C	X – 1.0°C
(76.1°F or more)		(X – 4.5°F)	(X – 1.8°F)
16.5 ~ 24°C	temperature at start-up	X – 2.0°C	X – 1.0°C
(61.7 ~ 75.2°F)		(X – 3.6°F)	(X – 1.8°F)
16°C or less	16°C	X - 2.0°C	X - 1.0°C = 15°C
(60.8°F or less)	(60.8°F)	(X - 3.6°F)	(X - 1.8°F = 59°F)

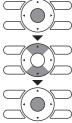

# 3.4 Clock and Calendar Setting (With Wired Remote Controller BRC1E73)

 Press Menu/OK button to display the main menu screen.

Press ▼▲ buttons to select
 Clock & Calendar on the main menu

Press **Menu/OK** button to display the clock & calendar screen.

Press ▼▲ buttons to select
 Enable / Disable on the schedule screen.

Press **Menu/OK** button to display the enable/disable screen.

 Press ▼▲ buttons to select Enable or Disable on the enable/disable screen.

Press **Menu/OK** button after selecting the item. The confirmation screen is displayed.

 Press ◀► buttons to select Yes on the confirmation screen.

Pressing **Menu/OK** button confirms the enable/disable setting for the schedule and takes you back to the basic screen.

(R24076)

# 3.6 Setback Function (With Wired Remote Controller BRC1E73)

Applicable Models

FFQ09/12/15/18Q2VJU

**Outline** 

The Setback function can be used to maintain the space temperature in an assigned range for an unoccupied period.

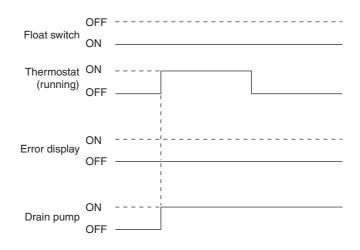

**Details** 

The setback icon flashes on the LCD of wired remote controller when the unit is turned on by the setback control.

- When enabled, the Setback mode becomes active when the indoor unit is turned off by either the user, a schedule event or an off timer.
- Setback function is not available by default. It can be enabled by the system installer.

# 3.7 Drain Pump Control

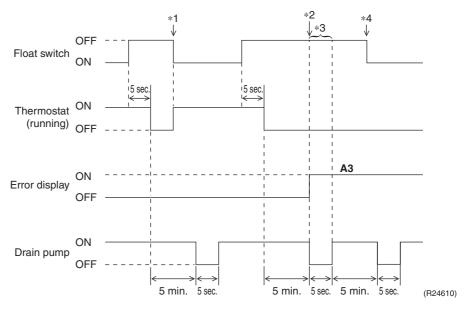

# **Normal Operation**

(R24037)

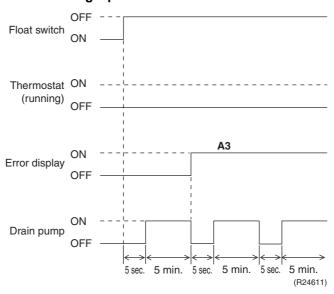

- The float switch is ON in normal operation.
- When cooling operation starts (thermostat ON), the drain pump turns ON simultaneously.
- After the thermostat turns OFF, the drain pump continues to operate.

## If Float Switch is OFF with Thermostat ON in Cooling Operation

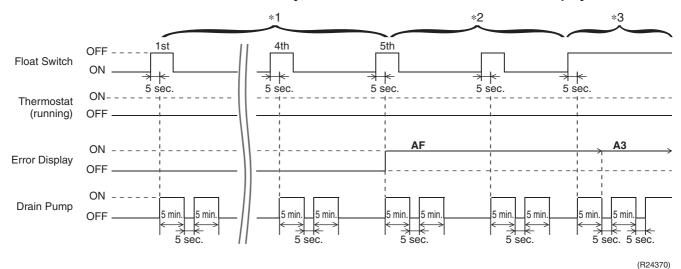

- When the float switch stays OFF for 5 sec., the thermostat turns OFF.
- After the thermostat turns OFF, the drain pump continues to operate for another 5 minutes.
- \*1. If the float switch turns ON again during the residual operation of the drain pump, cooling operation also turns on again (thermostat ON).
- \*2. If the float switch remains OFF even after the residual operation of the drain pump has ended, the error code **A3** is determined.
- \*3. The drain pump turns OFF once residual operation has ended, then turns ON again after 5 seconds.
- \*4. After **A3** is determined and the unit comes to an abnormal stop, the thermostat will remain OFF even if the float switch turns ON again.

# If Float Switch is OFF with Thermostat OFF in Cooling Operation

- When the float switch stays OFF for 5 sec., the drain pump turns ON.
- If the float switch remains OFF even after the residual operation of the drain pump has ended, the error code A3 is determined.
- The drain pump turns OFF once residual operation has ended, then turns ON again after 5 seconds.

# If Float Switch Turns ON and OFF Continuously, or Float Switch Turns OFF While AF Displayed

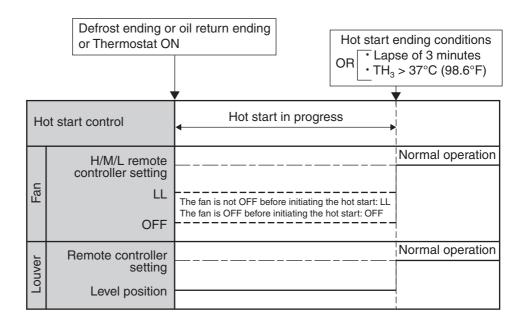

- When the float switch stays OFF for 5 sec., the drain pump turns ON.
- \*1. If the float switch continues to turn OFF and ON 5 times consecutively, it is judged as a drain system error and the error code **AF** is determined.
- \*2. The drain pump continues to turn ON/OFF in accordance with the float switch ON/OFF even after **AF** is determined.
- \*3. While the error code **AF** is displayed, if the float switch remains OFF even after the residual operation of the drain pump has ended, the error code **A3** will be determined.

# 3.8 Hot Start Control (In Heating Operation Only)

**Outline** 

At startup with thermostat ON or after the completion of defrosting in heating operation, the indoor unit fan is controlled to prevent cold air from blasting out and ensure startup capacity.

**Details** 

R4003450

TH<sub>3</sub>: Temperature detected by the indoor heat exchanger thermistor (R3T)

# 3.9 Presence and Floor Sensors (Option)

# Applicable Models

FFQ09/12/15/18Q2VJU

#### **Outline**

With the human presence signal and the floor temperature signal from the optional sensor kit, the system provides the energy saving control, or the comfortable temperature control and airflow direction control preventing the direct draft to the human.

To use sensor related functions, a wired remote controller (BRC1E73) and optional sensor kit (BRYQ60A2W(S)) are necessary to be installed.

#### **Details**

#### 1. Draft prevention (with presence sensor)

When the sensor detects human presence during auto-swing operation, the system sets the airflow direction parallel to the floor (position 0) to reduce unpleasant draft.

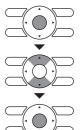

The operation returns to the normal auto-swing as the sensor detects no human in the room.

- Draft prevention is enabled only when decoration panel BYFQ60C2W1W(S), sensor kit BRYQ60A2W(S) and wired remote controller BRC1E73 are connected to the main unit and draft prevention is set to "enabled" on the wired remote controller.
- Factory setting is "disabled".
- Draft prevention cannot be activated when individual flap control is set, even if draft prevention is enabled on the wired remote controller.

## Setting on the wired remote controller

- Press Menu/OK button to display the main menu screen.
- Press ▼▲ buttons to select
   Configuration and press Menu/OK button.

Press ▼▲ buttons to select
 Draft Prevention and press
 Menu/OK button.

- Press ▼▲ buttons to select Enable .
- The confirmation screen will appear when Menu/OK button is pressed.

4

- Press ◀▶ buttons to select Yes .
- Press Menu/OK button to confirm the settings and to return to the basic screen.

R4003392

## 2. Auto-setback by sensor (with presence sensor)

After pre-determined time has elapsed without detection of human presence, the unit automatically shifts the target temperature gradually for energy saving.

The target temperature displayed on the remote controller remains same as the initial set value during the above change of target temperature.

The target temperature shifts within the range of the highest programmable temperature while in cooling operation and the lowest programmable temperature while in heating operation.

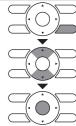

Upon human detection, the target temperature returns to the original setting.

- Auto-setback by sensor is enabled only when decoration panel BYFQ60C2W1W(S), sensor kit BRYQ60A2W(S) and wired remote controller BRC1E73 are connected to the main unit and auto-setback by sensor is set to "enabled" on the wired remote controller.
- Factory setting is "disabled".

## Setting on the remote controller

- Press Cancel button for 4 seconds on the basic screen to display Service Settings menu.
- Press ▼▲ buttons to select Energy Saving Options .
- Press Menu/OK button to display Energy Saving Options menu.

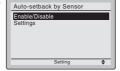

- Press ▼▲ buttons to select Auto-setback by Sensor.
- Press Menu/OK button to display Auto-setback by Sensor menu.

- Press ▼▲ buttons to select Enable/ Disable.
- Press Menu/OK button.

- Press ▼▲ buttons to select Enable.
- Press Menu/OK button after selecting the item. Then the confirmation screen is displayed.

5

- Press ◀► buttons to select Yes.
- Press Menu/OK button to confirm the settings and to return to the Service Settings menu.

R4003390

## 3. Auto-off by sensor (with presence sensor)

After pre-determined time has elapsed without detection of human presence, the unit automatically stops operation.

The auto-off time can be set between 1- 24 hours by the hour.

Once the unit stops operation by auto-off function, the system would not restart even if the human is detected again.

- Auto-off by sensor is enabled only when decoration panel BYFQ60C2W1W(S), sensor kit BRYQ60A2W(S) and wired remote controller BRC1E73 are connected to the main unit and auto-off by sensor is set to "enabled" on the wired remote controller.
- Factory setting is "disabled".

#### Setting on the remote controller

- Press Cancel button for 4 seconds on the basic screen to display Service Settings menu.
- Press ▼▲ buttons to select Energy Saving Options
- Press Menu/OK button to display Energy Saving Options menu.

- Press ▼▲ buttons to select Auto-off by Sensor.
- Press Menu/OK button to display Auto-off by Sensor menu.

3

Press ▼▲ buttons to select Enable.

4

- Press ◀▶ buttons to go into the auto-off time setting.
- Press ▼▲ buttons to set auto-off hour(s) (1 ~ 24).
- Press Menu/OK button. Then the confirmation screen is displayed.

- Press ◀► buttons to select Yes.
- Press Menu/OK button to confirm the settings and to return to the Service Settings menu.

R4003391

## 4. Room temperature adjustment by sensing (with floor sensor)

The system uses living space temperature calculated from temperatures detected by room temperature thermistor (suction air thermistor in the indoor unit) and floor sensor, as the target temperature.

Operation becomes more optimized by using not only suction air temperature but floor temperature.

■ This function is enabled when decoration panel BYFQ60C2WAW(S) and sensor kit BRYQ60A2W(S) is connected to the main unit.

# 3.10 Other Functions

# 3.10.1 Signal Receiving Sign

When the indoor unit receives a signal from the remote controller, the unit emits a signal receiving sound.

# 3.10.2 Auto-restart Function

If a power failure (even a momentary one) occurs during the operation, the system restarts automatically in the same conditions as before when the power supply is restored to the conditions prior to the power failure.

It takes 3 minutes to restart the operation because 3-minute standby function is activated.

# 3.10.3 Emergency Operation Switch (With Wireless Remote Controller)

#### **Outline**

When the wireless remote controller does not work due to battery failure or the absence thereof, use the emergency operation switch.

#### **Details**

#### Start

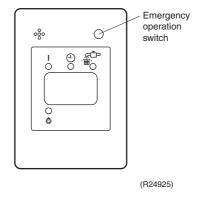

Press emergency operation switch.

- The indoor unit runs in the previous operation mode.
- The system operates with the previously set airflow direction (FFQ series only).

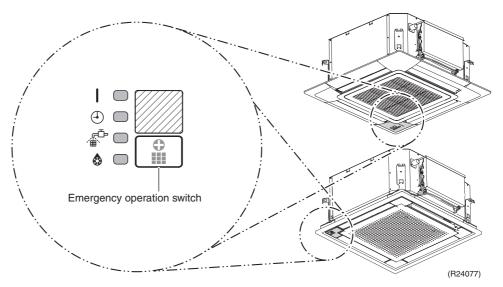

#### Stop

Press emergency operation switch again.

# **FDMQ Series**

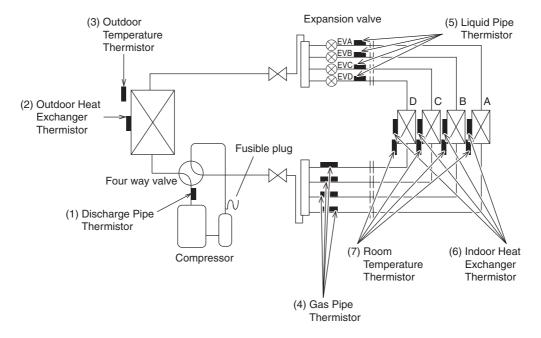

**FFQ Series** 

Control Specification SiUS121827E

# 4. Control Specification

# 4.1 Thermistor Functions

R4003431

The illustration is for the 4-room models as representative and have 4 lines of indoor unit system (A  $\sim$  D).

The 5-room models have 5 lines (A  $\sim$  E).

# (1) Discharge Pipe Thermistor

- The discharge pipe thermistor is used for controlling discharge pipe temperature. If the discharge pipe temperature (used in place of the inner temperature of the compressor) rises abnormally, the operating frequency becomes lower or the operation halts.
- The discharge pipe thermistor is used for detecting disconnection of the discharge pipe thermistor.

# (2) Outdoor Heat Exchanger Thermistor

- The outdoor heat exchanger thermistor is used for controlling the target discharge pipe temperature. The system sets the target discharge pipe temperature according to the outdoor and indoor heat exchanger temperature, and controls the electronic expansion valve opening so that the target discharge pipe temperature can be obtained.
- In cooling operation, the outdoor heat exchanger thermistor is used for detecting the disconnection of the discharge pipe thermistor. When the discharge pipe temperature drops below the outdoor heat exchanger temperature by more than a certain value, the discharge pipe thermistor is judged as disconnected.
- In cooling operation, the outdoor heat exchanger thermistor is used for high pressure protection.
- (3) Outdoor Temperature Thermistor
- The outdoor temperature thermistor detects the outdoor air temperature and is used for refrigerant shortage detection, input current control, outdoor fan control, liquid compression protection function, and so on.
- (4) Gas Pipe Thermistor
- In cooling operation, the gas pipe thermistor is used for gas pipe isothermal control. The system controls electronic expansion valve opening so that the gas pipe temperature in each room becomes equal.
- (5) Liquid Pipe Thermistor
- Liquid pipe thermistor is used to protect the compressor against liquid attack during cooling operation.

■ In case of low outdoor temperature operation, the system compares the indoor heat exchanger temperature with the liquid pipe temperature to detect disturbances in the refrigerant flow. If any, the system adjusts the opening of the electronic expansion valve to control the refrigerant flow.

- When only one indoor unit is in heating operation, the liquid pipe thermistor is used for subcooling control. The actual subcool is calculated with the liquid pipe temperature and the maximum indoor heat exchanger temperature. The system controls the electronic expansion valve openings to obtain the target subcool.
- In heating operation, the liquid pipe thermistor is used for liquid pipe isothermal control. The system controls the electronic expansion valve opening so that the liquid pipe temperatures in each room becomes equal.

# (6) Indoor Heat Exchanger Thermistor

- The indoor heat exchanger thermistor is used for controlling the target discharge pipe temperature. The system sets the target discharge pipe temperature according to the outdoor and indoor heat exchanger temperature, and controls the electronic expansion valve opening so that the target discharge pipe temperature can be obtained.
- In cooling operation, the indoor heat exchanger thermistor is used for freeze-up protection control. If the indoor heat exchanger temperature drops abnormally, the operating frequency becomes lower or the operation halts.
- In cooling operation, the indoor heat exchanger thermistor is used for anti-icing function. If any of the following conditions are met in the room where operation halts, it is assumed as icing. The conditions are

 $Tc \le -1^{\circ}C (30.2^{\circ}F)$ 

 $Ta - Tc \ge 10^{\circ}C (18^{\circ}F)$ 

where Ta is the room temperature and Tc is the indoor heat exchanger temperature.

- The indoor heat exchanger thermistor is used for wiring error check function. The refrigerant flows in order from the port A to detect the indoor heat exchanger temperature one by one, and then wiring and piping can be checked.
- In heating operation, the indoor heat exchanger thermistor is used for heating peak-cut control. If the indoor heat exchanger temperature rises abnormally, the operating frequency becomes lower or the operation halts.
- In heating operation, the indoor heat exchanger thermistor is used for detecting the disconnection of the discharge pipe thermistor. When the discharge pipe temperature drops below the highest indoor heat exchanger temperature by more than a certain value, the discharge pipe thermistor is judged as disconnected.
- Excluding the case that all the indoor units are in heating operation, the indoor heat exchanger thermistor is used for subcooling control. The actual subcool is calculated with the liquid pipe temperature and the indoor heat exchanger temperature. The system controls the electronic expansion valve openings to obtain the target subcool.

## (7) Room Temperature Thermistor

■ The room temperature thermistor detects the room air temperature and is used for controlling the room air temperature.

The refrigerant circuit has a fusible plug.

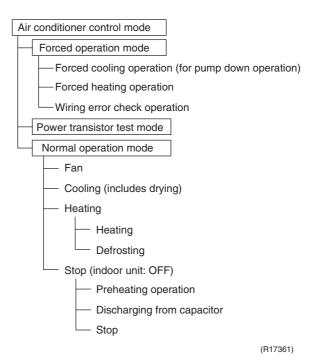

In order to prevent the increase of pressure when abnormal heating is caused by fire or others, the fusible part of the plug is molten at a temperature of  $70 - 75^{\circ}C$  (158 -  $167^{\circ}F$ ) to release the pressure into the atmosphere.

## 4.2 Mode Hierarchy

**Outline** 

The air conditioner control has normal operation mode, forced operation mode, and power transistor test mode for installation and servicing.

**Details** 

- Unless specified otherwise, dry operation command is regarded as cooling operation.
- Indoor fan operation cannot be made in multiple indoor units. (A forced fan command is made during forced cooling operation.)

#### **Determine Operation Mode**

The system judges the operation mode command which is set by each room in accordance with the procedure, and determines the operation mode of the system.

The following procedure is taken when the modes conflict with each other.

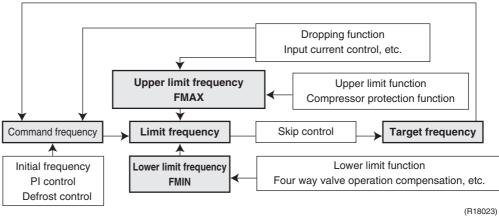

- \*1. The system follows the mode which is set first. (First-push, first-set)
- \*2. For the rooms where the different mode is set, standby mode is activated. (The operation lamp blinks.)

#### **Frequency Control** 4.3

#### **Outline**

Frequency corresponding to each room's capacity is determined according to the difference between the target temperature and the temperature of each room.

> When the shift of the frequency is less than zero ( $\Delta F$ <0) by PI control, the target frequency is used as the command frequency.

#### **Details**

The compressor's frequency is determined by taking the following steps.

## 1. Determine command frequency

Command frequency is determined in the following order of priority.

- (1) Limiting defrost control time
- (2) Forced cooling/heating
- (3) Indoor frequency command

## 2. Determine upper limit frequency

The minimum value is set as the upper limit frequency among the frequency upper limits of the following functions:

Compressor protection, input current, discharge pipe temperature, low Hz high pressure limit, heating peak-cut, freeze-up protection, defrost.

#### 3. Determine lower limit frequency

The maximum value is set as the lower limit frequency among the frequency lower limits of the following function:

Four way valve operation compensation, draft prevention, pressure difference upkeep.

#### 4. Determine prohibited frequency

There is a certain prohibited frequency such as a power supply frequency.

#### **Parameters**

Indoor unit output determined from indoor unit volume, airflow rate and other factors.

## S value: Indoor Unit Capacity

S value is the capacity of the indoor unit, and is used for frequency command. Ex:

Capacity	S value	Capacity	S value
7 kBtu/h	20	15 kBtu/h	50
9 kBtu/h	25	18 kBtu/h	60
12 kBtu/h	35	24 kBtu/h	71

#### △D signal: Indoor frequency command

The difference between the room thermistor temperature and the target temperature is taken as the  $\Delta D$  value and is used for  $\Delta D$  signal of frequency command.

	Temperature difference	∆D signal	Temperature difference	∆D signal	Temperature difference	∆D signal	Temperature difference	∆D signal
-	-2.0°C (-3.6°F)	*OFF	0°C (0°F)	4	2.0°C (3.6°F)	8	4.0°C (7.2°F)	12
-	-1.5°C (–2.7°F)	1	0.5°C (0.9°F)	5	2.5°C (4.5°F)	9	4.5°C (8.1°F)	13
-	-1.0°C (–1.8°F)	2	1.0°C (1.8°F)	6	3.0°C (5.4°F)	10	5.0°C (9.0°F)	14
_	-0.5°C (-0.9°F)	3	1.5°C (2.7°F)	7	3.5°C (6.3°F)	11	5.5°C (9.9°F)	15

Values depend on the type of indoor unit.

## **Initial Frequency**

When starting the compressor, or when conditions are varied due to a change of operating rooms, the frequency must be initialized according to a total of the maximum  $\Delta D$  value of each room and a total Q value ( $\Sigma Q$ ) of the operating room (the room in which the thermostat is set to ON).

#### PI Control

## 1. P control

Max\D value is calculated in each sampling time (15 seconds), and the frequency is adjusted according to its difference from the frequency previously calculated.

#### 2. I control

If the operating frequency does not change for more than a certain fixed time, the frequency is adjusted according to  $max\Delta D$  value.

When max D value is low, the frequency is lowered.

When max∆D value is high, the frequency is increased.

## 3. Frequency control when other controls are functioning

When frequency is dropping:

Frequency control is carried out only when the frequency drops.

For limiting lower limit:

Frequency control is carried out only when the frequency rises.

## 4. Upper and lower limit of frequency by PI control

The frequency upper and lower limits are set according to the total of S values. When the indoor unit quiet operation commands come from all the rooms or when the outdoor unit quiet operation commands come from all the rooms, the upper limit frequency is lower than the usual setting.

<sup>\*</sup> OFF = Thermostat OFF

## 4.4 Controls at Mode Changing/Start-up

## 4.4.1 Preheating Control

## **Outline**

The inverter operation in open phase starts with the conditions of the outdoor temperature and the preheating command from the indoor unit.

#### **Details**

#### **ON Condition**

■ When the outdoor temperature is below 6°C (42.8°F), the inverter operation in open phase starts

#### **OFF Condition**

■ When the outdoor temperature is higher than 7.5°C (45.5°F), the inverter operation in open phase stops.

## 4.4.2 Four Way Valve Switching

## **Outline**

The four way valve coil is energized/not energized depending on the operation mode (Heating: ON, Cooling/Dry/Defrost: OFF). In order to eliminate the switching sound as the four way valve coil switches from ON to OFF when the heating is stopped, the OFF delay switch of the four way valve is carried out.

#### **Details**

#### OFF delay switch of four way valve

The four way valve coil is energized for 150 seconds after the operation is stopped.

## 4.4.3 Four Way Valve Operation Compensation

## **Outline**

At the beginning of operation as the four way valve is switched, the pressure difference to activate the four way valve is acquired when the output frequency is higher than a certain fixed frequency, for a certain fixed time.

## **Details**

## **Starting Conditions**

- The compressor starts and the four way valve switches from OFF to ON
- The four way valve switches from ON to OFF during operation
- The compressor starts after resetting
- The compressor starts after the fault of four way valve switching

The lower limit of frequency keeps **A** Hz for 70 seconds for any of the conditions above.

	Cooling	Heating
A (Hz)	32	26

## 4.4.4 3-Minute Standby

Turning on the compressor is prohibited for 3 minutes after turning off. (The function is not used when defrosting.)

## 4.4.5 Compressor Protection Function

When turning the compressor from OFF to ON, the upper limit of frequency is set as follows. (The function is not used when defrosting.)

	Cooling	Heating	
A (Hz)	35	23	
<b>B</b> (Hz)	48	48	
C (Hz)	65	65	
<b>D</b> (Hz)	83	83	
E (Hz)	95 95		
F (seconds)	120		
<b>G</b> (seconds)	270 ~ 420		
H (seconds)	290 ~ 450		
J (seconds)	170 ~ 250		
K (seconds)	150 ~ 220		

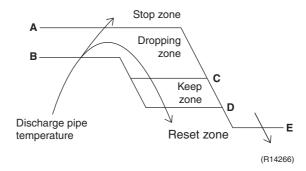

## 4.5 Discharge Pipe Temperature Control

**Outline** 

The discharge pipe temperature is used as the internal temperature of the compressor. If the discharge pipe temperature rises above a certain level, the upper limit of frequency is set to keep the discharge pipe temperature from rising further.

**Details** 

Zone	Control
Stop zone	When the temperature reaches the stop zone, the compressor stops.
Dropping zone	The upper limit of frequency decreases.
Keep zone	The upper limit of frequency is kept.
Reset zone	The upper limit of frequency is canceled.

Α	120°C (248°F)
В	111°C (231.8°F)
С	109°C (228.2°F)
D	107°C (224.6°F)
E	107°C (224.6°F)

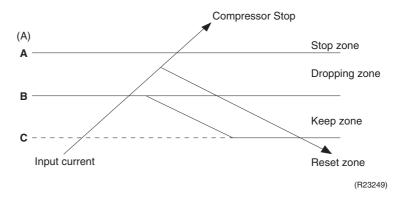

## 4.6 Input Current Control

## **Outline**

The microcomputer calculates the input current while the compressor is running, and sets the frequency upper limit based on the input current.

In case of heat pump models, this control is the upper limit control of the frequency and takes priority over the lower limit control of four way valve operation compensation.

#### **Details**

## Frequency control in each zone

## Stop zone

■ After the input current remains in the stop zone for 2.5 seconds, the compressor is stopped.

## **Dropping zone**

- The upper limit of the compressor frequency is defined as operation frequency 2 Hz.
- After this, the output frequency is lowered by 2 Hz every second until it reaches the keep zone.

## Keep zone

■ The present maximum frequency goes on.

## Reset zone

■ Limit of the frequency is canceled.

	Cooling	Heating
<b>A</b> (A)	27.5	29
<b>B</b> (A)	25.5	27
<b>C</b> (A)	24.5	26

## Limitation of current dropping and stop value according to the outdoor temperature

The current drops when outdoor temperature becomes higher than a certain level (depending on the model).

## 4.7 Freeze-up Protection Control

## 4.7.1 Freeze-up Protection Control (Except FDMQ Series)

Applicable Models

FTXR09/12/18TVJUW(S) CTXG09/12/18QVJUW(S)

CTXS07LVJU

FTXS09/12/15/18/24LVJU

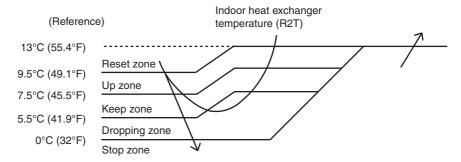

FDXS09/12LVJU CDXS15/18/24LVJU FVXS09/12/15/18NVJU FFQ09/12/15/18Q2VJU

**Outline** 

During cooling operation, the signal sent from the indoor unit determines the frequency upper limit and prevents freezing of the indoor heat exchanger. The signals from the indoor unit is divided into zones.

**Details** 

The operating frequency limitation is judged with the indoor heat exchanger temperature.

R4003451

## 4.7.2 Freeze-up Protection Control for FDMQ Series

#### **Outline**

During cooling operation, the signal sent from the indoor unit determines the frequency upper limit and prevents the indoor heat exchanger from freezing.

**Details** 

When the freeze-up protection control starts, the compressor stops, the airflow rate is fixed to L tap, and the drain pump turns ON. Conditions for starting and ending are as below.

## **Starting conditions**

The freeze-up protection control starts when any of the following conditions is satisfied.

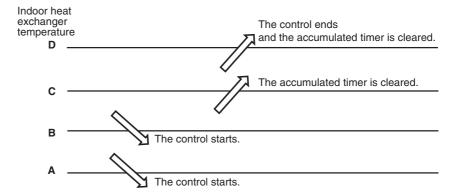

- The indoor heat exchanger temperature remains at **A** or lower for 1 minute.
- The accumulated time that the indoor heat exchanger temperature remains at B or lower reaches 40 minutes.

## Accumulated timer clearing condition

• The indoor heat exchanger temperature remains at **C** or higher for 20 minutes.

## **Ending condition**

• The indoor heat exchanger temperature remains at **D** or higher for 10 minutes.

R4003387

	(°C)	(°F)
Α	<b>–</b> 5	23.0
В	-1	30.2
С	4	39.2
D	7	44.6

## 4.8 Heating Peak-cut Control

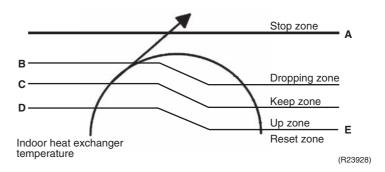

**Outline** 

During heating operation, the indoor heat exchanger temperature determines the frequency upper limit to prevent abnormal high pressure.

**Details** 

- The operating frequency is judged with the indoor heat exchanger temperature 2 minutes after the operation starts and **F** seconds after the number of the rooms in operation is changed.
- The maximum value of the indoor heat exchanger temperature controls the following (excluding the rooms not in operation).

Zone	Control
Stop zone	When the temperature reaches the stop zone, the compressor stops.
Dropping zone	The upper limit of frequency decreases.
Keep zone	The upper limit of frequency is kept.
Up zone	The upper limit of frequency increases.
Reset zone	The upper limit of frequency is canceled.

Α	62.5°C (144.5°F)
В	54°C (129.2°F)
С	53°C (127.4°F)
D	51°C (123.8°F)
E	49°C (120.2°F)

	F (seconds)
When increase	30
When decrease	2

## 4.9 Outdoor Fan Control

## 1. Fan OFF control during defrosting

The outdoor fan is turned OFF while defrosting.

## 2. Fan OFF delay when stopped

The outdoor fan is turned OFF 60 seconds after the compressor stops.

#### 3. Fan speed control for pressure difference upkeep

The rotation speed of the outdoor fan is controlled for keeping the pressure difference during cooling operation with low outdoor temperature.

- When the pressure difference is low, the rotation speed of the outdoor fan is reduced.
- When the pressure difference is high, the rotation speed of the outdoor fan is controlled as well as normal operation.

## 4. Fan control when the number of heating room decreases

When the outdoor temperature is more than 10°C (50°F), the fan is turned off for 30 seconds.

## 5. Fan speed control during forced cooling operation

The outdoor fan is controlled as well as normal operation during forced cooling operation.

## 6. Fan speed control for POWERFUL operation

The rotation speed of the outdoor fan is increased during POWERFUL operation.

## 7. Fan speed control during indoor/outdoor unit quiet operation

The rotation speed of the outdoor fan is reduced by the command of the indoor/outdoor unit quiet operation.

## 8. Fan ON/OFF control when operation (cooling, heating, dry) starts/stops

The outdoor fan is turned ON when the operation starts. The outdoor fan is turned OFF when the operation stops.

## 4.10 Liquid Compression Protection Function

#### **Outline**

The compressor stops according to the outdoor temperature for protection.

#### **Details**

Operation stops depending on the outdoor temperature.

The compressor turns off under the conditions that the system is in cooling operation and the outdoor temperature is below  $-12^{\circ}$ C ( $10.4^{\circ}$ F).

## 4.11 Defrost Control

## **Outline**

Defrosting is carried out by the cooling cycle (reverse cycle). The defrosting time or outdoor heat exchanger temperature must be more than a certain value to finish defrosting.

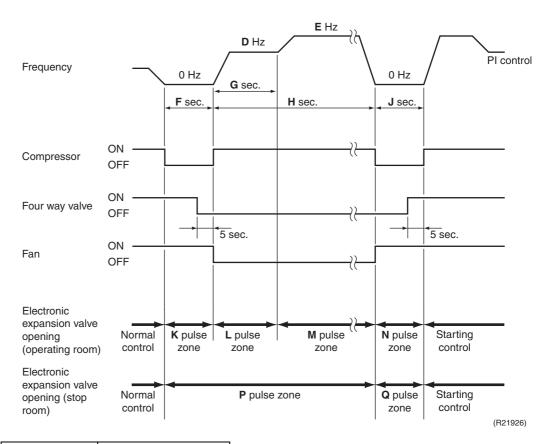

#### **Details**

## **Conditions for Starting Defrost**

- The starting conditions are determined with the outdoor temperature and the outdoor heat exchanger temperature.
- The system is in heating operation.
- The compressor operates for 6 minutes.
- More than A minutes of accumulated time have passed after the start of the operation, or ending the previous defrosting.

## **Conditions for Canceling Defrost**

The judgment is made with the outdoor heat exchanger temperature. (**B**°C (**C**°F))

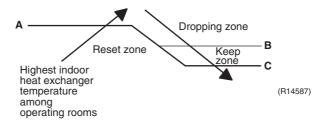

A (minutes)	30
B (°C)	4 ~ 12
C (°F)	39.2 ~ 53.6
<b>D</b> (Hz)	43
E (Hz)	72
F (seconds)	60
G (seconds)	120
H (seconds)	650
J (seconds)	60
K (pulse)	480
L (pulse)	480
M (pulse)	480
N (pulse)	480
P (pulse)	240
Q (pulse)	240

## 4.12 Low Hz High Pressure Limit

## **Outline**

The system controls the upper limit of the frequency to prevent abnormal high pressure while the frequency is low. Control is carried out according to three zones.

#### **Details**

Α	23 ~ 54°C (73.4 ~ 129.2°F)
В	22 ~ 53°C (71.6 ~ 127.4°F)
С	19 ~ 50°C (66.2 ~ 122.0°F)

<sup>★</sup>Temperature varies depending on the outdoor heat exchanger temperature.

## 4.13 Electronic Expansion Valve Control

## **Outline**

The following items are included in the electronic expansion valve control.

## Electronic expansion valve is fully closed

- 1. Electronic expansion valve is fully closed when turning on the power.
- 2. Pressure equalizing control

## **Room Distribution Control**

- 1. Gas pipe isothermal control
- 2. SC (subcooling) control
- 3. Liquid pipe temperature control (with all ports connected and all rooms being air-conditioned)
- 4. Liquid pipe temperature control for rooms not in operation
- 5. Dew prevention control for indoor rotor

#### **Open Control**

- 1. Electronic expansion valve control when starting operation
- 2. Electronic expansion valve control when the frequency changes
- 3. Electronic expansion valve control for defrosting
- 4. Electronic expansion valve control for oil recovery
- 5. Electronic expansion valve control when a discharge pipe temperature is abnormally high
- 6. Electronic expansion valve control when the discharge pipe thermistor is disconnected
- 7. Electronic expansion valve control for indoor unit anti-icing control

#### **Feedback Control**

Target discharge pipe temperature control

## **Details**

The following are the examples of the electronic expansion valve control for each operation mode.

										_
Operation pattern  When power is turned on	● : Available — : Not available	Gas pipe isothermal control	SC (subcooling) control	Control when the frequency changes	Control for abnormally high discharge pipe temperature	Oil recovery control	Indoor anti-icing control	Liquid pipe temperature control	Liquid pipe temperature control for non-operating units	Dew prevention control for indoor rotor

R4003422

★1: When all the indoor units are operating, liquid pipe temperature control is conducted.

★2: SC (subcooling) control is conducted for the operating indoor units, when some of the units are not operating.

★3: Liquid pipe temperature control for stopped room is conducted for the non-operating indoor units.

## 4.13.1 Initialization as Power Supply On

The electronic expansion valve is initialized (fully closed) when the power is turned on. Then, the valve opening position is set and the pressure is equalized.

## 4.13.2 Pressure Equalizing Control

When the compressor is stopped, the pressure equalizing control is activated. The electronic expansion valve opens, and develops the pressure equalization.

## 4.13.3 Opening Limit Control

The maximum and minimum opening of the electronic expansion valve are limited.

- The maximum electronic expansion valve opening in the room in operation: 480 pulses
- The minimum electronic expansion valve opening in the room in operation: 60 pulses The electronic expansion valve is fully closed in the room where cooling is stopped and is opened at a fixed degree during defrosting.

## 4.13.4 Starting Operation Control/Changing Operation Room

The electronic expansion valve opening is controlled when the operation starts, thus preventing superheating or liquid compression.

## 4.13.5 Control when the Frequency Changes

When the target discharge pipe temperature control is active, if the target frequency changes to a specified value in a certain period of time, the target discharge pipe temperature control is canceled and the target opening of the electronic expansion valve is changed.

## 4.13.6 Oil Recovery Function

**Outline** 

The electronic expansion valve opening for the room not in operation is set as to open for a certain time at a specified interval so that the oil for the room not in operation may not be accumulated.

**Details** 

During cooling operation, the electronic expansion valve for the room not in operation is opened every 1 hour by 80 pulses for specified time.

## 4.13.7 High Discharge Pipe Temperature Control

When the compressor is operating, if the discharge pipe temperature exceeds a certain value, the electronic expansion valve opens and the refrigerant runs to the low pressure side.

This procedure lowers the discharge pipe temperature.

## 4.13.8 Discharge Pipe Thermistor Disconnection Control

#### **Outline**

The disconnection of the discharge pipe thermistor is detected by comparing the discharge pipe temperature with the condensing temperature. If the discharge pipe thermistor is disconnected, the electronic expansion valve opens according to the outdoor temperature and the operation frequency, operates for a specified time, and then stops.

After 3 minutes, the operation restarts and checks if the discharge pipe thermistor is disconnected. If the discharge pipe thermistor is disconnected, the system stops after operating for a specified time

If the disconnection is detected repeatedly, the system is shut down. When the compressor runs for 60 minutes without any error, the error counter is reset.

## **Details**

## **Determining thermistor disconnection**

When the starting control (930 seconds) finishes, the following adjustment is made.

- When the operation mode is cooling When the following condition is fulfilled, the discharge pipe thermistor disconnection is ascertained.
  - Discharge pipe temperature + 6°C (10.8°F) < outdoor heat exchanger temperature
- When the operation mode is heating When the following condition is fulfilled, the discharge pipe thermistor disconnection is ascertained.
  - Discharge pipe temperature + 6°C (10.8°F) < highest indoor heat exchanger temperature

#### When the thermistor is disconnected

When the disconnection is ascertained, the compressor continues operation for 9 minutes and then stops.

## 4.13.9 Gas Pipe Isothermal Control During Cooling

When the units are operating in multiple rooms, the gas pipe temperature is detected and the electronic expansion valve opening is adjusted so that the temperature of the gas pipe in each room becomes equal.

- When the gas pipe temperature > the average gas pipe temperature,
  - ightarrow the opening degree of electronic expansion valve for the corresponding room increases.
- When the gas pipe temperature < the average gas pipe temperature,
  - ightarrow the opening degree of electronic expansion valve for the corresponding room decreases.

The temperatures are monitored every 30 seconds.

## 4.13.10 SC (Subcooling) Control

#### **Outline**

The liquid pipe temperature and the heat exchanger temperature are detected and the electronic expansion valve opening is compensated so that the SC of each room becomes the target SC.

- When the actual SC > target SC, open the electronic expansion valve of the room.
- When the actual SC < target SC, close the electronic expansion valve of the room.

#### **Details**

#### **Start Conditions**

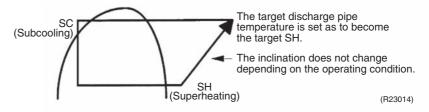

After finishing the starting control (930 seconds), (all) the electronic expansion valve(s) for the room(s) in operation is/are controlled.

## **Determine Electronic Expansion Valve Opening**

The electronic expansion valve opening is adjusted so that the temperature difference between the maximum heat exchanger temperature of connected room and the liquid pipe temperature thermistor becomes constant.

## 4.13.11 Target Discharge Pipe Temperature Control

The target discharge pipe temperature is obtained from the indoor and outdoor heat exchanger temperature, and the electronic expansion valve opening is adjusted so that the actual discharge pipe temperature becomes close to the target discharge pipe temperature. (Indirect SH (superheating) control using the discharge pipe temperature)

The electronic expansion valve opening and the target discharge pipe temperature are adjusted every 15 seconds. The target discharge pipe temperature is controlled by indoor heat exchanger temperature and outdoor heat exchanger temperature. The opening degree of the electronic expansion valve is adjusted by the following.

- Target discharge pipe temperature
- Actual discharge pipe temperature
- Previous discharge pipe temperature

## 4.14 Malfunctions

## 4.14.1 Sensor Malfunction Detection

## **Relating to Thermistor Malfunction**

- 1. Outdoor heat exchanger thermistor
- 2. Discharge pipe thermistor
- 3. Radiation fin thermistor
- 4. Gas pipe thermistor
- 5. Outdoor temperature thermistor
- 6. Liquid pipe thermistor

## 4.14.2 Detection of Overcurrent and Overload

## **Outline**

In order to protect the inverter, an excessive output current is detected and the OL temperature is observed to protect the compressor.

#### **Details**

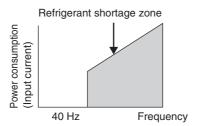

- If the inverter current exceeds 27.5 ~ 29 A (depending on the model), the system shuts down the compressor.
- If the OL (on the side of the compressor body) temperature exceeds 125°C (257°F), the compressor stops.

## 4.14.3 Refrigerant Shortage Control

#### **Outline**

If the power consumption is below the specified value and the frequency is higher than the specified frequency, it is regarded as refrigerant shortage.

The power consumption is low comparing with that in the normal operation when refrigerant is insufficient, and refrigerant shortage is detected by checking power consumption.

R4003425

Refer to Refrigerant shortage on page 195 for details.

## 4.14.4 Anti-icing Function

During cooling, if the indoor heat exchanger temperature in the room not in operation becomes below the specified temperature for the specified time, the electronic expansion valve is opened in the operation stopped room as specified, and the fully closed operation is carried out. After this, if freezing abnormality occurs longer than specified time, the system shuts down as the system abnormality.

• Used to return to the previous screen.

## 11. LCD (with backlight)

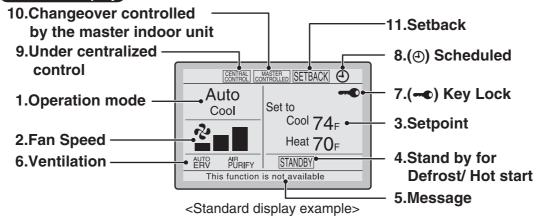

- The backlight will be illuminated for approximately 30 seconds by pressing any button.
- If two remote controllers are used to control a single indoor unit, only the controller accessed first will have backlight functionality.

R5000161

## **Liquid Crystal Display**

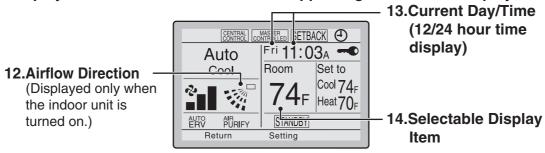

- Three types of display mode (Standard, Detailed and Simple) are available.
- Standard display is set by default.
- Detailed and Simple displays can be selected in the main menu.

## Standard display

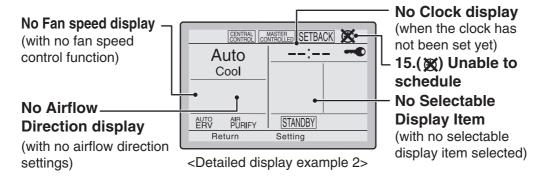

## Detailed display

■ The airflow direction, clock, and selectable item appear on Detailed display screen in addition to the items appearing on Standard display.

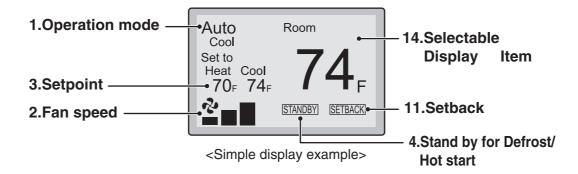

<Detailed display example 1>

R5000162

## Simple display

## Note for all display modes

• Depending on the field settings, while the indoor unit is stopped, OFF may be displayed instead of the operation mode and/or the setpoint may not be displayed.

R5000163

## 1. Operation mode

- Used to display the current operation mode: Cool, Heat, Vent, Fan, Dry or Auto.
- In Auto mode, the actual operation mode (Cool or Heat) will be also displayed.
- Operation mode cannot be changed when OFF is displayed.
   Operation mode can be changed after starting operation.

## 2. Fan Speed

- Used to display the fan speed that is set for the indoor unit.
- The fan speed will not be displayed if the connected model does not have fan speed control functionality.

## 3. Setpoint

- Used to display the setpoint for the indoor unit.
- Use the Celsius/Fahrenheit item in the main menu to select the temperature unit (Celsius or Fahrenheit).

## 4. Stand by for Defrost/Hot start

"STANDBY"

If ventilation icon is displayed in this field:

 Indicates that an energy recovery ventilator (ERV) is connected.

For details, refer to the Operation Manual of the ERV.

## 5. Message

The following messages may be displayed.

- "This function is not available"
- Displayed for a few seconds when an Operation button is pressed and the indoor unit does not provide the corresponding function.
- In a remote control group, the message will not appear if at least one of the indoor units provides the corresponding function.

- "Error: Push Menu button"
- "Warning: Push Menu button"
- Displayed if an error or warning is detected.
- "Time to clean filter"
- "Time to clean element"
- "Time to clean filter & element"
- Displayed as a reminder when it is time to clean the filter and/or element.

#### 6. Ventilation

- Displayed when an energy recovery ventilator is connected.
- Ventilation Mode icon. "AUTO ERV BYPASS"
   These icons indicate the current ventilation mode (ERV only) (AUTO, ERV, BYPASS).
- Air Purify ICON " AIR TO This icon indicates that the air purifying unit (Optional) is in operation.

## 7. Key Lock

• Displayed when the key lock is set.

## 8. Scheduled

 Displayed if the Schedule or Off timer is enabled.

## 9. Under Centralized control "CENTRAL"

 Displayed if the system is under the management of a multi-zone controller (Optional) and the operation of the system through the remote controller is limited.

# 10. Changeover controlled by the master indoor unit "CONTROLLED" (VRV only)

 Displayed when another indoor unit on the system has the authority to change the operation mode between cool and heat.

R5000164

## 11. Setback "SETBACK"

• The setback icon flashes when the unit is turned on by the setback control.

## 12. Airflow Direction "."

- Displayed when the airflow direction and swing are set.
- If the connected indoor unit model does not include oscillating louvers this item will not be displayed.

# 13. Current Day/Time (12/24 hour time display)

- Displayed if the clock is set.
- If the clock is not set, "--: -- " will be displayed.
- 12 hour time format is displayed by default.
- Select 12/24 hour time display option in the main menu under "Clock & Calendar".

## 14. Selectable Display Item

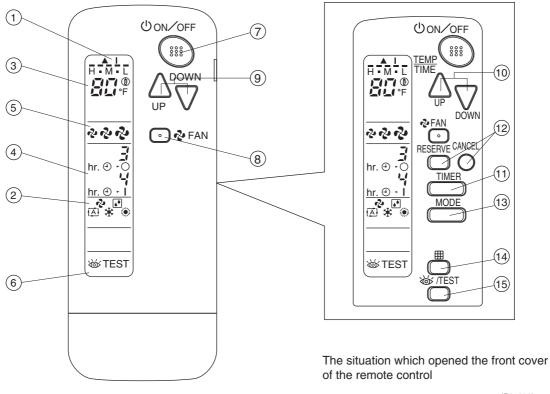

- Room temperature is selected by default.
- For other choices see the operation manual.

## 15.XUnable to schedule

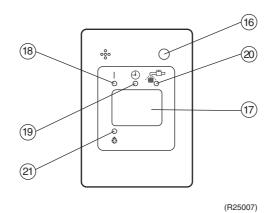

- Displayed when the clock needs to be set.
- The schedule function will not work unless the clock is set.

R5000165

# 1. General Problem Symptoms and Check Items

Symptom	Check Item	Details	Reference Page
None of the units	Check the power supply.	Check if the rated voltage is supplied.	_
operates.	Check the types of the indoor units.	Check if the indoor unit type is compatible with the outdoor unit.	_
	Check the outdoor temperature.	Heating/cooling operations are not available when the outdoor temperature is out of the operation limit. Check the reference page for the operation limit.	292
	Diagnose with remote controller indication	_	162, 163
	For RA Indoor Unit: Check the wireless remote controller addresses.	Check if address settings for the wireless remote controller and indoor unit are correct.	258
	For SA Indoor Unit: Check the wireless remote controller addresses. If using 2 remote controllers for 1 indoor unit, check MAIN/SUB setting.	Check if address settings for the wireless remote controller and indoor unit are correct.  Check if the MAIN/SUB setting is correct.	192, 193
Operation sometimes stops.	Check the power supply.	A power failure of 2 to 10 cycles can stop air conditioner operation. (Operation lamp OFF)	_
	Check the outdoor temperature.	Heating/cooling operations are not available when the outdoor temperature is out of the operation limit. Check the reference page for the operation limit.	292
	Diagnose with remote controller indication.	_	162, 163
Some indoor units do not operate.	Check the type of the indoor units.	compatible with the outdoor unit.	
	Diagnose with remote controller indication	_	162, 163
Units operate but do not cool, or do not heat.	Check for wiring and piping errors in the connection between the indoor and outdoor units.	Check the piping. Conduct the wiring error check described on the product diagnosis nameplate.	_
	Check for thermistor detection errors.	Check if the thermistor is mounted securely.	_
	Check for faulty operation of the electronic expansion valve.	Set all the units to cooling operation, and compare the temperatures of the liquid pipes to see if the each electronic expansion valve works.	_
	Diagnose with remote controller indication.	_	162, 163
	Diagnose by service port pressure and operating current.	Check for refrigerant shortage.	195
Large operating noise and vibrations	Check the output voltage of the power module.	_	245
	Check the power module.	_	_
	Check the installation condition.	Check if the required spaces for installation (specified in the installation manual) are provided.	_

# 2. Troubleshooting with LED

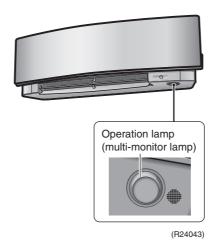

#### 2.1 Indoor Unit

#### **Operation Lamp**

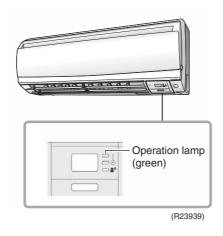

The operation lamp blinks when any of the following errors is detected.

- A protection device of the indoor or outdoor unit is activated, or when the thermistor malfunctions.
- A signal transmission error occurs between the indoor and outdoor units. In either case, conduct the diagnostic procedure described in the following pages.

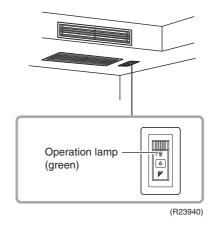

#### **FTXR/CTXG Series**

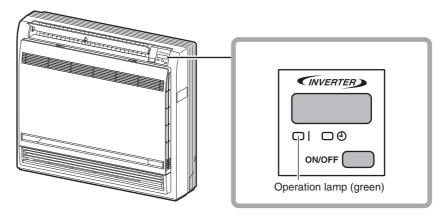

#### **CTXS/FTXS Series**

#### **FDXS/CDXS Series**

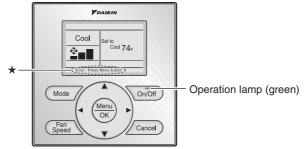

#### **FVXS Series**

FDMQ, FFQ series with BRC1E73 wired remote controller

R4003515

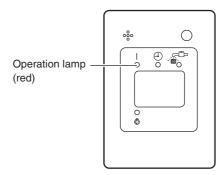

★The error or warning message also blinks on the basic screen.

R4003516

#### FDMQ series with BRC082A43 wireless remote controller

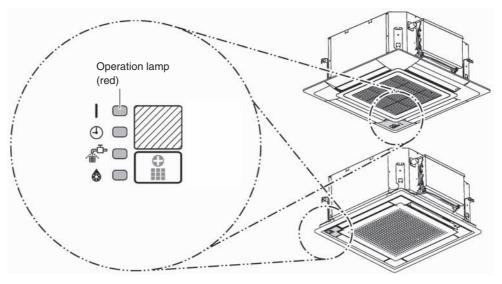

In case of wireless remote controller, a receiver is installed. When the error occurs, the operation lamp on the receiver blinks.

R4003517

#### FFQ series with BRC082A41W, BRC082A42W(S) wireless remote controller

In case of wireless remote controller, a transmitter board (A2P) and a receiver (A3P) are installed on indoor unit. When the error occurs, the operation lamp on the receiver (A3P) blinks.

R4003518

When operation stops suddenly and the operation lamp blinks, it could be operation mode conflict. For FFQ models, even if the operation mode conflict occurs, the operation lamp does not blink.

- 1. Check if the operation modes are all the same for the indoor units connected to multi system outdoor unit.
- 2. If not, set all the indoor units to the same operation mode and confirm that the operation lamp is not blinking.
- Moreover, when the operation mode is automatic, set all the indoor unit operation mode as cooling or heating and check again if the operation lamp is normal.
   If the lamp stops blinking after the above steps, there is no malfunction.
- \*Operation stops and operation lamp blinks only for the indoor unit that has a different operation mode set later. The first set operation mode has priority.

#### **Service Monitor**

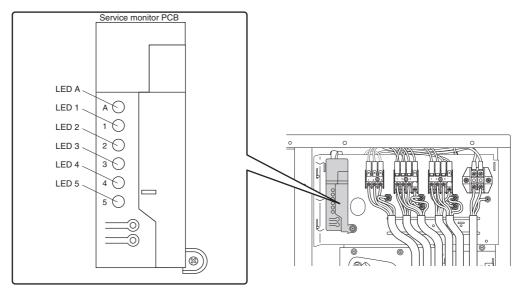

The indoor unit has a green LED (LED A, HAP) on the control PCB. When the microcomputer works in order, the LED blinks. (Refer to page 37 for the location of LED.)

### 2.2 Outdoor Unit

The outdoor unit has a green LED (LED A) and red LEDs (LED 1 ~ LED 5) on the PCB.

When the microcomputer works in order, the LED A blinks, and when the system is in normal condition, the red LEDs are OFF.

Even after the error is canceled and the unit operates in normal condition, the LED indication remains.

R6000447

Refer to page 54 for the location of LED.

Service Diagnosis SiUS121827E

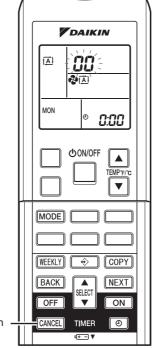

# 3. Service Diagnosis

#### 3.1 ARC452 Series Wireless Remote Controller

#### 3.1.1 Method 1

1. When **TIMER CANCEL** button is held down for 5 seconds, @@ is displayed on the temperature display screen.

2. Press TIMER CANCEL button repeatedly until a long beep sounds.

TIMER CANCEL button

< ARC452 Series >

(R23945)

 $\hfill \blacksquare$  The code indication changes in the sequence shown below.

  - Two consecutive beeps: The left-side number corresponds with the error code but the rightside number does not.

SiUS121827E Service Diagnosis

Long beep: Both the left-side and right-side numbers correspond with the error code.
 The numbers indicated when you hear the long beep are the error code.
 Refer to page 162, 163.

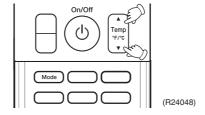

6. Press Mode button.

The right-side number blinks.

7. Press **Temp** ▲ or **Temp** ▼ button and change the number until you hear the long beep.

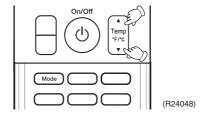

- 8. Diagnose by the sound.
  - Beep: The left-side number does not correspond with the error code.
  - Two consecutive beeps: The left-side number corresponds with the error code but the rightside number does not.
  - Long beep: Both the left-side and right-side numbers correspond with the error code.
- 9. Determine the error code.

The numbers indicated when you hear the long beep are the error code. Refer to page 162, 163.

10. Press **Mode** button for 5 seconds to exit from the service check mode.

When the remote controller is left untouched for 60 seconds, it returns to the normal mode also.

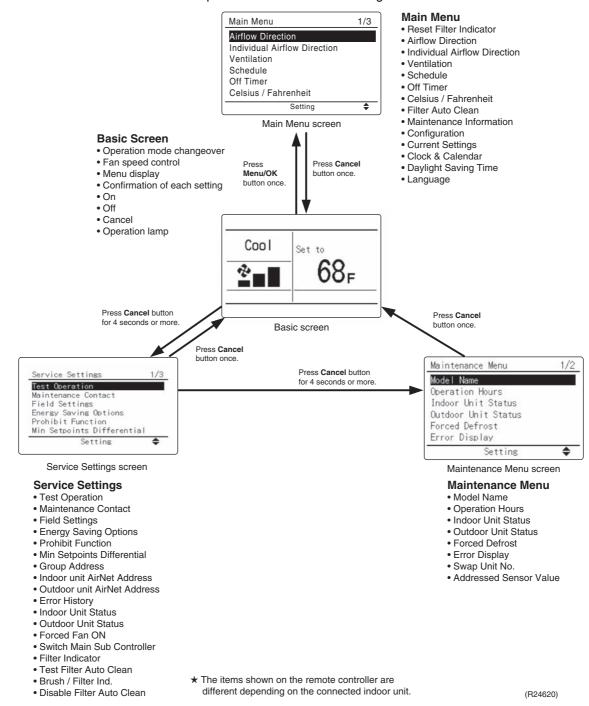

Service Diagnosis SiUS121827E

#### 3.3 BRC1E73 Wired Remote Controller

# Relations Between Modes

On power-up, the message "Checking the connection. Please standby." will be displayed on the remote controller screen temporarily and then the basic screen will be displayed. To access a mode from the basic screen, refer to the figure below.

When any of the operation buttons is pressed, the backlight will come on and remain lit for about 30 seconds. Be sure to press a button while the backlight is on.

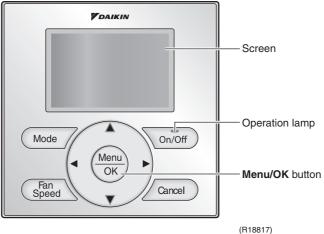

SiUS121827E **Service Diagnosis** 

#### Service **Diagnosis**

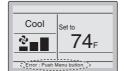

The following message is displayed on the screen when an error (or a warning) occurs during operation.

Check the error code and take the corrective action specified for the particular model.

#### Operation

• If an error occurs, either one of the following items will flash in the basic screen.

#### **Error: Push Menu button**

- \* The Operation lamp will flash.
- \* For Simple display, the message is not displayed, and only the Operation lamp flashes.

#### Warning: Push Menu button

- \* The Operation lamp will not flash.
- \* For Simple display, the message is not displayed, and the Operation lamp does not flash, either.

• Press Menu/OK button.

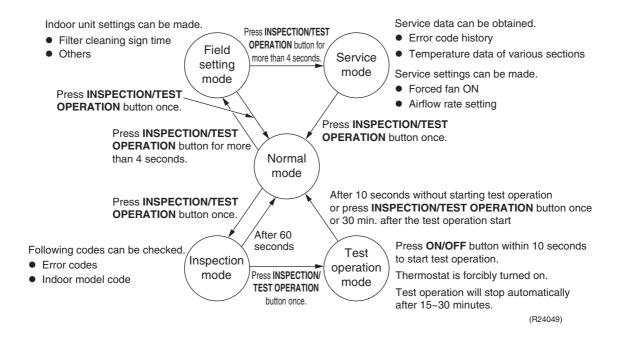

- The error code will flash and the service contact and model name or code may be displayed.
- Notify your Daikin dealer of the Error code and model name or code.

- 1. The error codes in the parenthesis ( ) are displayed only when the system is shut down.
- 2. When a sensor error occurs, check the remote controller display to determine which sensor is malfunctioning.

If the remote controller does not indicate the error code, conduct the following procedure.

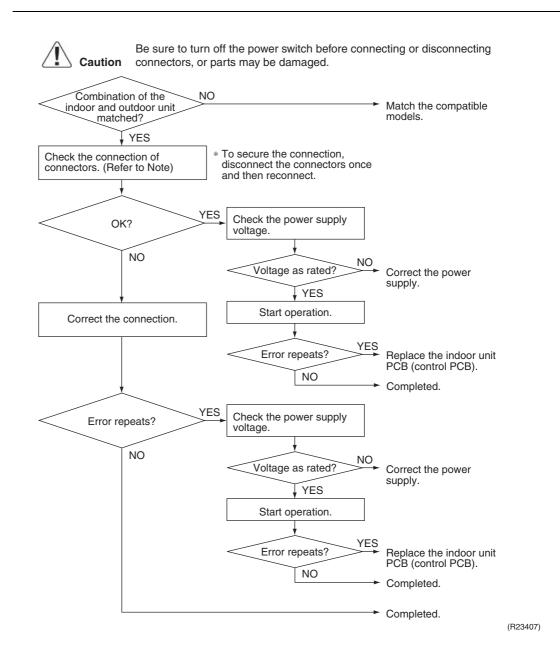

- Turn the power off and then on again. If the same LED indication appears again immediately after the power is turned on, the fault is in the thermistor.
- If the above condition does not result, the fault is in the CT.
- 3. The indoor unit error code may take the precedence in the remote controller display.
- 4. Turn the power off and then on again. If the same LED indication appears again, outdoor unit PCB is faulty. Replace the outdoor unit PCB.

# 5. Troubleshooting for RA Indoor Unit

# 5.1 Indoor Unit PCB Abnormality

Error Code	A1	
Method of Error Detection	The system checks if the circuit works properly within the microcomputer of the indoor unit.	
Error Decision Conditions	The system cannot set the internal settings.	
Supposed Causes	<ul> <li>Wrong models interconnected</li> <li>Defective indoor unit PCB</li> <li>Disconnection of connector</li> <li>Reduction of power supply voltage</li> </ul>	

#### **Troubleshooting**

note

Check the following connector.

Model Type	Connector
FTXR, CTXG, CTXS, FTXS, FVXS series	Terminal strip ~ Control PCB (H1, H2, H3)
FDXS, CDXS series	Terminal block ~ Control PCB (H1, H2, H3)

# 5.2 Freeze-up Protection Control/Heating Peak-cut Control

#### **Error Code**

#### **A5**

#### Method of Error Detection

- Freeze-up protection control
  - During cooling operation, the freeze-up protection control (operation halt) is activated according to the temperature detected by the indoor heat exchanger thermistor.
- Heating peak-cut control

  During heating operation, the temperature detected by the indoor heat exchanger thermistor is used for the heating peak-cut control (operation halt, outdoor fan stop, etc.)

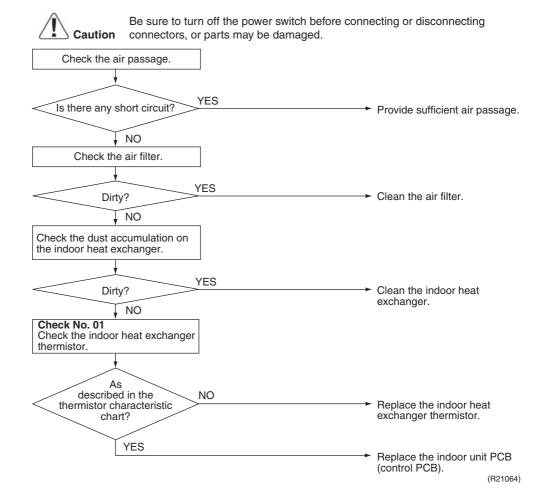

# **Error Decision Conditions**

- Freeze-up protection control
  - During cooling operation, the indoor heat exchanger temperature is below 0°C (32°F).
- Heating peak-cut control
   During heating operation, the indoor heat exchanger temperature is above 65°C (149°F).

# Supposed Causes

- Short-circuited air
- Clogged air filter of the indoor unit
- Dust accumulation on the indoor heat exchanger
- Defective indoor heat exchanger thermistor
- Defective indoor unit PCB

#### Troubleshooting

Check No.01 Refer to P.232

# 5.3 Indoor Fan Motor or Related Abnormality

#### 5.3.1 Indoor Fan Motor (DC Motor) or Related Abnormality

Applicable Models

FTXR09/12/18TVJUW(S) CTXG09/12/18QVJUW(S)

CTXS07LVJU

FTXS09/12/15/18/24LVJU FVXS09/12/15/18NVJU

**Error Code** 

**A6** 

Method of Error Detection The rotation speed detected by the Hall IC during indoor fan motor operation determines abnormal fan motor operation.

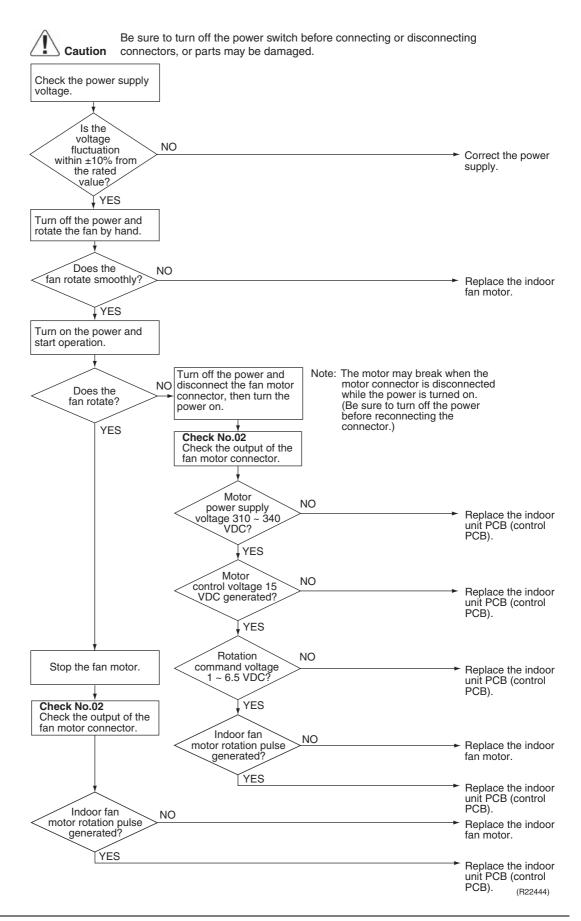

**Error Decision Conditions** 

The detected rotation speed does not reach the demanded rotation speed of the target tap, and is less than 50% of the maximum fan motor rotation speed.

Supposed Causes

- Remarkable decrease in power supply voltage
- Layer short inside the fan motor winding
- Breaking of wire inside the fan motor
- Breaking of the fan motor lead wires
- Defective capacitor of the fan motor
- Defective indoor unit PCB

#### **Troubleshooting**

The rotation pulse is the feedback signal from the indoor fan motor.

Check No.02 Refer to P. 233

#### 5.3.2 Indoor Fan Motor (AC Motor) or Related Abnormality

Applicable Models

FDXS09/12LVJU CDXS15/18/24LVJU

**Error Code** 

**A6** 

Method of Error Detection The rotation speed detected by the Hall IC during indoor fan motor operation determines abnormal fan motor operation.

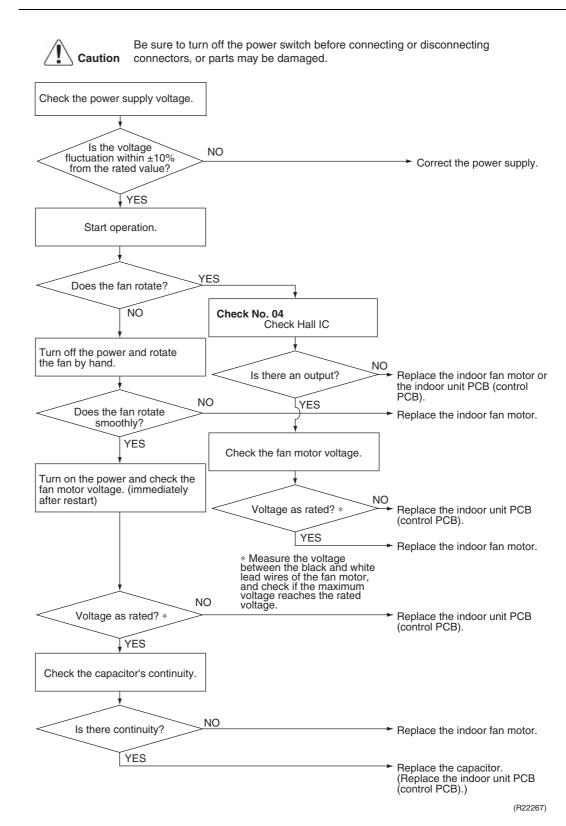

Error Decision Conditions

The detected rotation speed does not reach the demanded rotation speed of the target tap.

Supposed Causes

- Power supply voltage out of specification
- Layer short inside the fan motor winding
- Breaking of wire inside the fan motor
- Breaking of the fan motor lead wires
- Defective capacitor of the fan motor
- Defective indoor unit PCB

#### **Troubleshooting**

Reference

Check No.04 Refer to P.234

# 5.4 Thermistor or Related Abnormality

#### **Error Code**

# C4, C9

#### Method of Error Detection

The temperatures detected by the thermistors determine thermistor errors.

# **Error Decision Conditions**

The voltage between the both ends of the thermistor is either 4.96 V or more, or 0.04 V or less with the power on.

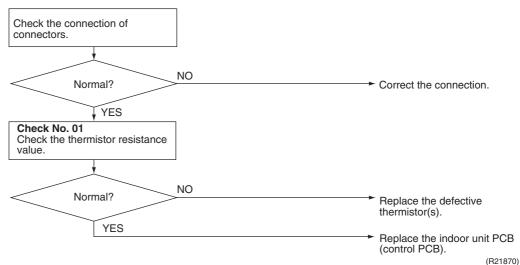

# Supposed Causes

- Disconnection of connector
- Defective thermistor(s)
- Defective indoor unit PCB

#### **Troubleshooting**

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

**C4**: Indoor heat exchanger thermistor **C9**: Room temperature thermistor

Check No.01 Refer to P.232

When replacing the defective thermistor(s), replace the thermistor as ASSY.

172

# 5.5 Front Panel Open/Close Fault

Applicable Models

FTXR09/12/18TVJUW(S), CTXG09/12/18QVJUW(S)

**Error Code** 

C7

Error Decision Conditions

■ If the error repeats, the system is shut down.

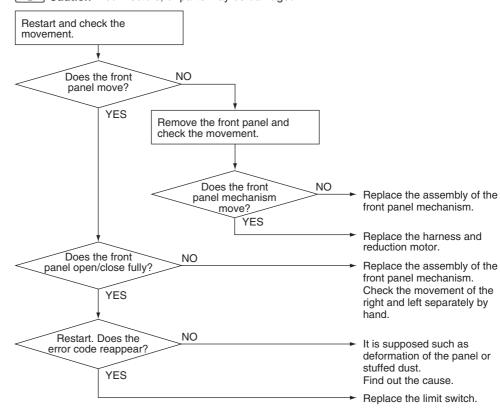

Supposed Causes

- Defective reduction motor
- Malfunction or deterioration of the front panel mechanism
- Defective limit switch

#### **Troubleshooting**

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

(R17249)

**1** Note

You cannot operate the unit by the remote controller when the front panel mechanism breaks down. <To the dealers: temporary measure before repair>

- 1. Turn off the power.
- 2. Remove the front panel.
- Turn on the power.(Wait until the initialization finishes.)

Operate the unit by the indoor unit ON/OFF button.

# 5.6 Signal Transmission Error (Between Indoor Unit and Outdoor Unit)

#### **Error Code**

#### U4

#### Method of Error Detection

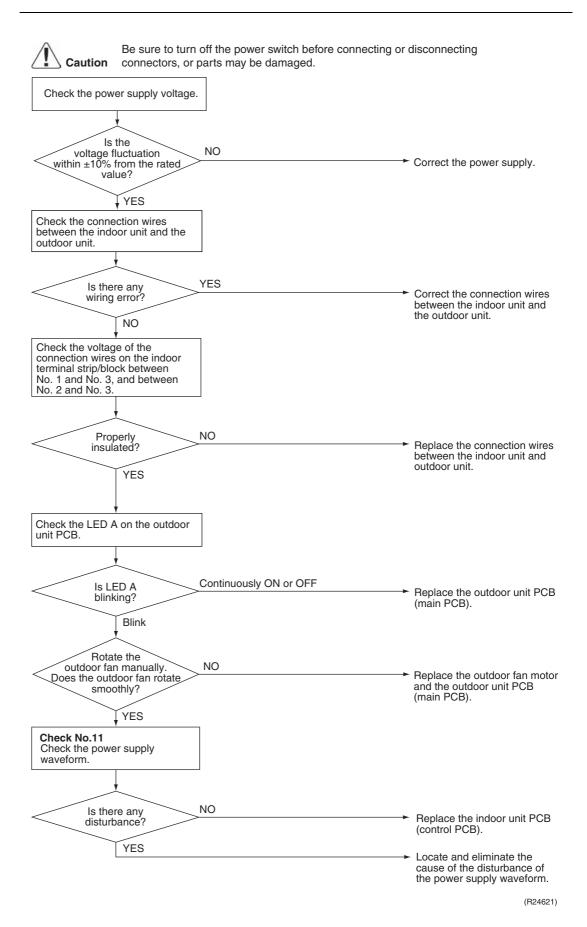

The signal transmission data received from the outdoor unit is checked whether it is normal.

# **Error Decision Conditions**

The data sent from the outdoor unit cannot be received normally, or the content of the data is abnormal.

# Supposed Causes

- Reduction of power supply voltage
- Wiring error
- Breaking of the connection wires between the indoor and outdoor units (wire No. 3)
- Defective outdoor unit PCB
- Short circuit inside the fan motor winding
- Defective indoor unit PCB
- Disturbed power supply waveform

Check No.11 Refer to P.235

### 5.7 Mismatching of Indoor Unit and Outdoor Unit

#### **Error Code**

### UA

### Method of Error Detection

The supply power is detected for its requirements (pair type is different from multi type) by the indoor/outdoor transmission signal.

### **Error Decision Conditions**

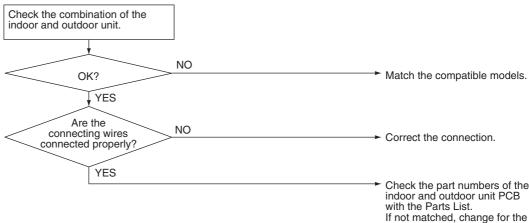

The pair type and multi type are interconnected.

# Supposed Causes

- Wrong models interconnected
- Wrong wiring of connecting wires
- Wrong indoor unit PCB or outdoor unit PCB mounted
- Defective indoor unit PCB
- Defective outdoor unit PCB

### **Troubleshooting**

(R23001)

correct PCB.

### 6. Troubleshooting for SA Indoor Unit

### 6.1 Indoor Unit PCB Abnormality

#### **Error Code**

### **A1**

#### Method of Error Detection

The system checks the data from EEPROM.

## **Error Decision Conditions**

When the data from the EEPROM is not received correctly

EEPROM (Electrically Erasable Programmable Read Only Memory): A memory chip that holds its content without power. It can be erased, either within the computer or externally and usually requires more voltage for erasure than the common +5 volts used in logic circuits. It functions like non-volatile RAM, but writing to EEPROM is slower than writing to RAM.

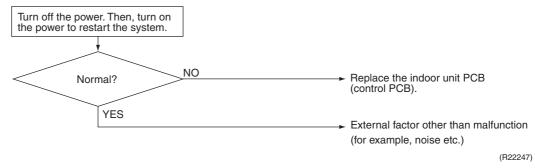

### Supposed Causes

- Defective indoor unit PCB
- External factor (noise etc.)

#### **Troubleshooting**

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

178

### 6.2 Drain Level Control System Abnormality

#### **Error Code**

### **A3**

### Method of Error Detection

The float switch detects error.

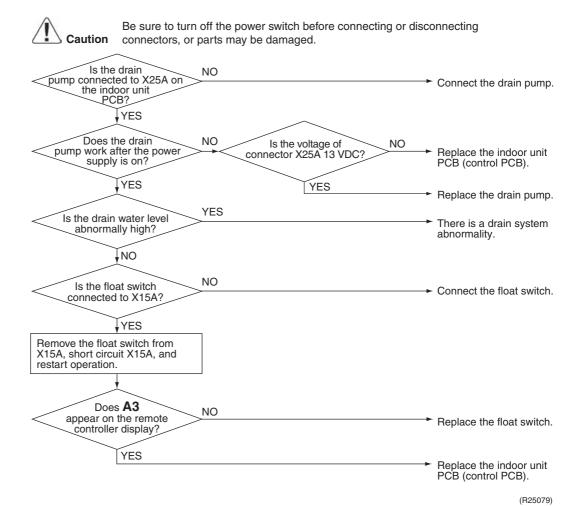

### **Error Decision Conditions**

When the water level reaches its upper limit and when the float switch turns OFF

# Supposed Causes

- Defective drain pump
- Improper drain piping work
- Clogged drain piping
- Defective float switch
- Defective indoor unit PCB
- Defective short circuit connector X15A, X25A on indoor unit PCB

#### **Troubleshooting**

### 6.3 Indoor Fan Motor or Related Abnormality

### 6.3.1 Indoor Fan Motor (DC Motor) or Related Abnormality

### Applicable Models

FDMQ09/12/15/18/24RVJU

#### **Error Code**

### **A6**

### Method of Error Detection

- Detection from the current flow on the fan PCB
- Detection from the rotation speed of the fan motor in operation

# **Error Decision Conditions**

The rotation speed is less than a certain level for 6 seconds.

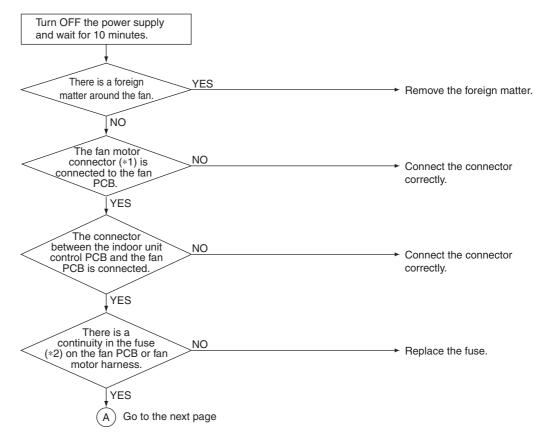

# Supposed Causes

- Clogged foreign matter
- Disconnection of fan motor connectors
- Disconnection of the connector between the indoor unit PCB and the fan PCB
- Defective fan PCB
- Defective fan motor
- No fuse continuity

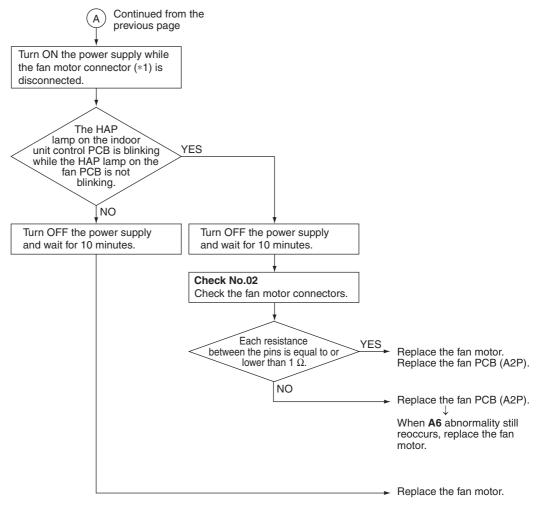

#### **Trouble Shooting**

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

R6000547

R6000548

#### Connector and indoor unit PCB

Model	*1 Fan motor connector	*2 Fuse
FDMQ Series	X8A	F2U

Check No.02 Refer to P. 233

### 6.3.2 Indoor Fan Motor (DC Motor) or Related Abnormality

Applicable Models

FFQ09/12/15/18Q2VJU

**Error Code** 

**A6** 

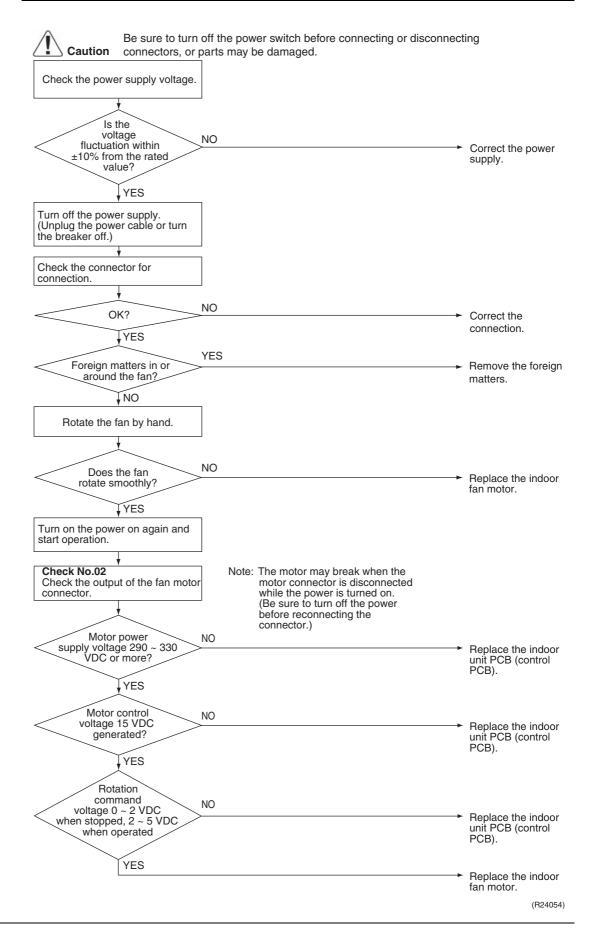

Method of Error Detection The rotation speed detected by the Hall IC during indoor fan motor operation determines abnormal fan motor operation.

**Error Decision Conditions** 

The fan motor is not revved up.

Supposed Causes

- Layer short inside the fan motor winding
- Breaking of wire inside the fan motor
- Breaking of the fan motor lead wires
- Defective indoor unit PCB

Check No.02 Refer to P. 233

### 6.4 Indoor Fan PCB Abnormality

Applicable Models

FDMQ09/12/15/18/24RVJU

**Error Code** 

**A8** 

Method of Error Detection Microcomputer checks the voltage state of the fan PCB.

**Error Decision Conditions** 

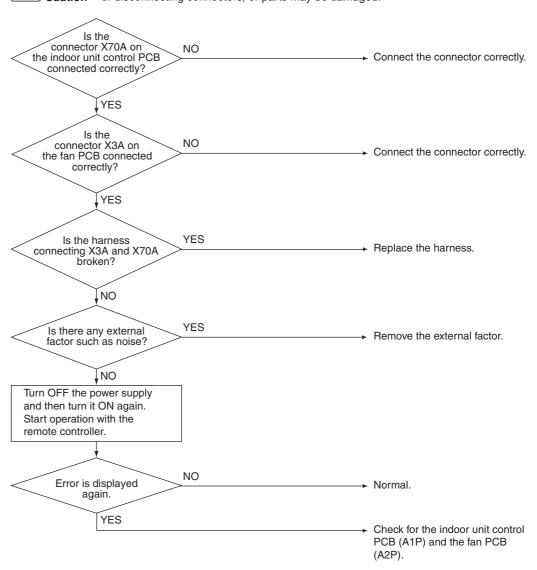

Overvoltage or voltage drop is detected on the fan PCB.

Supposed Causes

- Defective fan PCB
- External factor such as noise

#### **Troubleshooting**

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

R6000549

### 6.5 Humidifier or Related Abnormality

#### **Error Code**

### **AF**

### Method of Error Detection

Water leakage from humidifier(s) is detected based on the float switch ON/OFF changeover while the system is not operating.

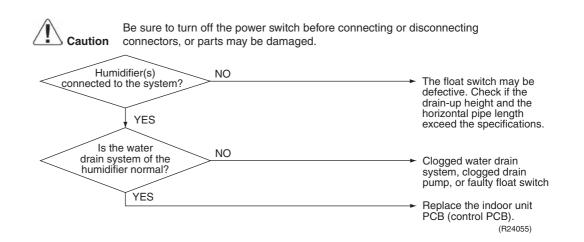

### **Error Decision Conditions**

The float switch changes from ON to OFF while the system is OFF

# Supposed Causes

- Defective float switch
- Error in water drain system of humidifier(s)
- Clogged electric expansion value in humidifier(s)
- Defective indoor unit PCB

#### **Troubleshooting**

Note

The system continues to operate with the thermostat OFF even while the error code is displayed.

### 6.6 Thermistor or Related Abnormality

#### **Error Code**

### C4, C5, C9

#### Method of Error Detection

The temperatures detected by the thermistors determine thermistor errors.

### **Error Decision Conditions**

The thermistor is disconnected or shorted while the unit is running.

## Supposed Causes

- Disconnection of connector
- Defective thermistor(s)
- Breaking of wires
- Defective indoor unit PCB

#### **Troubleshooting**

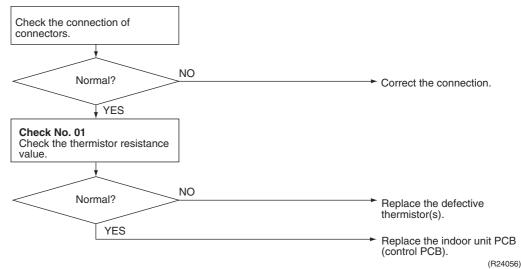

If the cause of the problem is related to the thermistors, the thermistors should be checked prior to changing the indoor unit PCB.

To check the thermistors, proceed as follows:

- 1. Disconnect the thermistor from the indoor unit PCB.
- 2. Read the temperature and the resistance value.
- Check if the measured values correspond with the values in the table of thermistor resistance check.

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

C4: Indoor heat exchanger thermistor 1 (liquid pipe) (R2T)

C5: Indoor heat exchanger thermistor 2 (R3T)

C9: Room temperature thermistor (R1T)

When replacing the defective thermistor(s), replace the thermistor as ASSY.

Check No.01 Refer to P.232

### 6.7 Presence Sensor or Floor Sensor Abnormality

Applicable Models

FFQ09/12/15/18Q2VJU

**Error Code** 

CE

Method of Error Detection The system detects abnormality by the output signal from the sensor(s).

**Error Decision Conditions** 

The sensor is disconnected or shorted while the unit is running.

Supposed Causes

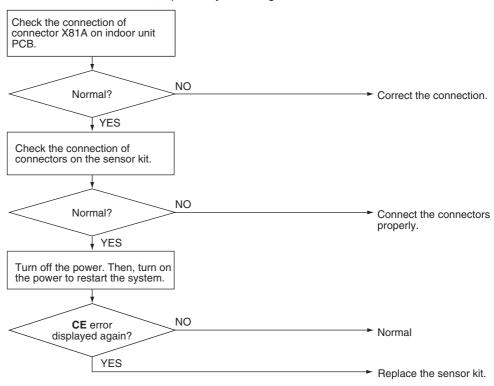

- Disconnection of connector
- Breaking of wires
- Defective sensor(s)
- Defective sensor kit PCB

#### **Troubleshooting**

If the cause of the problem is related to the sensors, the sensors should be checked prior to changing the indoor unit PCB.

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

(R24577)

A Note

When replacing the defective sensor(s), replace the sensor kit as ASSY.

### 6.8 Remote Controller Thermistor Abnormality

#### **Error Code**

### CJ

### Method of Error Detection

Even if remote controller thermistor is faulty, system is possible to operate by system thermistor. Malfunction detection is carried out by the temperature detected by the remote controller thermistor.

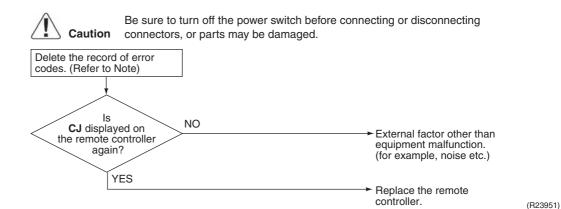

### **Error Decision Conditions**

The remote controller thermistor is disconnected or shorted while the unit is running.

# Supposed Causes

- Defective room temperature thermistor in the wired remote controller
- Defective wired remote controller PCB
- External factor such as noise

#### **Troubleshooting**

To delete the record of error codes, press **ON/OFF** button on the remote controller for 4 seconds or more while the error code is displayed in the inspection mode.

# 6.9 Signal Transmission Error (Between Indoor and Outdoor Unit)

#### **Error Code**

### **U4**

### Method of Error Detection

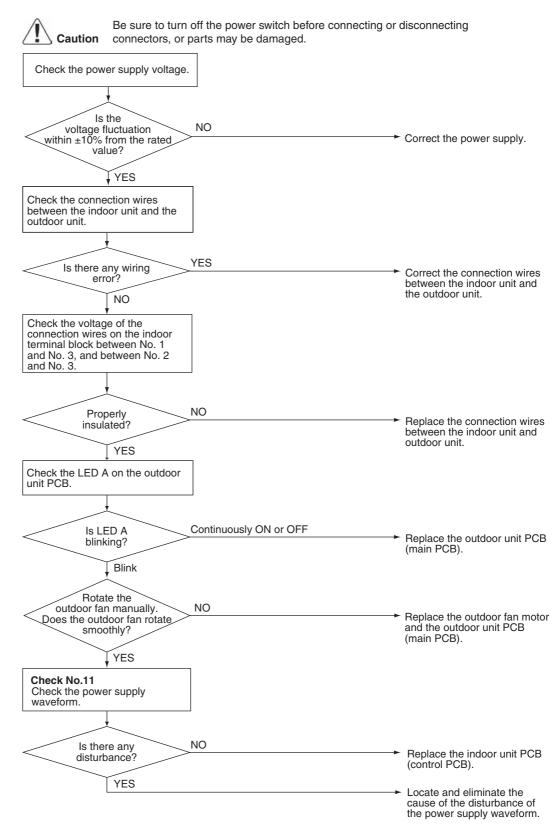

The signal transmission data from the outdoor unit is checked whether it is normal.

# Error Decision Conditions

The data sent from the outdoor unit cannot be received normally, or the content of the data is abnormal.

### Supposed Causes

- Power supply voltage out of specification
- Reduction of power supply voltage
- Wiring error
- Breaking of the connection wires between the indoor and outdoor units (wire No. 3)
- Defective outdoor unit PCB
- Short circuit inside the fan motor winding
- Defective indoor unit PCB
- Disturbed power supply waveform

(R24622)

Check No.11 Refer to P.235

# 6.10 Signal Transmission Error (Between Indoor Unit and Remote Controller)

#### **Error Code**

### U<sub>5</sub>

#### Method of Error Detection

In case of controlling 1 indoor unit with 2 remote controllers, check the system using microcomputer if signal transmission between indoor unit and remote controller (main and sub) is normal.

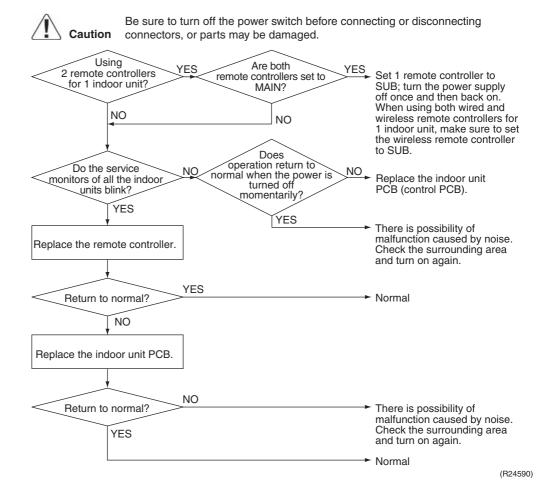

### Error Decision Conditions

Normal transmission does not continue for specified period.

### Supposed Causes

- Connection of 2 main remote controllers (when using 2 remote controllers)
- Defective indoor unit PCB
- Defective remote controller
- Transmission error caused by noise

#### **Troubleshooting**

A Note

For the way to change MAIN/SUB setting of remote controllers, refer to pages 267 and 268.

# 6.11 Signal Transmission Error (Between MAIN/SUB Remote Controllers)

#### **Error Code**

### **U8**

#### Method of Error Detection

In case of controlling 1 indoor unit with 2 remote controllers, check the system using microcomputer if signal transmission between MAIN remote controller and SUB remote controller is normal.

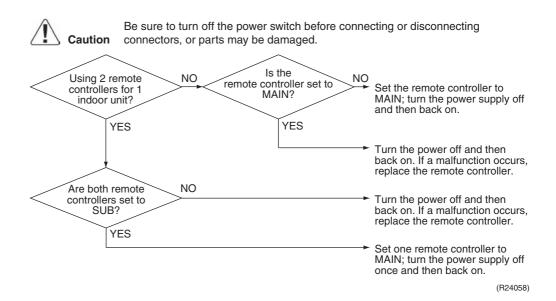

# **Error Decision Conditions**

Normal transmission does not continue for specified period.

### Supposed Causes

- Remote controller is set to SUB when using 1 remote controller
- Connection of 2 SUB remote controllers (when using 2 remote controllers)
- Defective remote controller PCB

#### **Troubleshooting**

**P** Note

For the way to change MAIN/SUB setting of remote controllers, refer to pages 267 and 268.

### 6.12 Mismatching of Indoor Unit and Outdoor Unit

#### **Error Code**

### **UA**

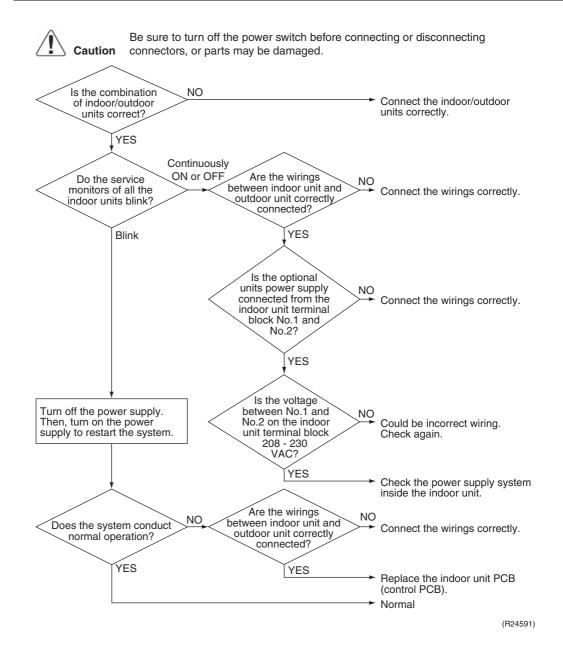

## **Error Decision Conditions**

Improper combination of indoor and outdoor units

### Supposed Causes

- Defective indoor unit PCB
- Indoor-outdoor unit transmission wiring error
- Defective optional unit(s) wirings
- Improper power supply wiring of indoor unit
- Improper wiring of connecting wires between indoor/outdoor units

#### **Troubleshooting**

### 7. Troubleshooting for Outdoor Unit

### 7.1 Refrigerant Shortage

#### **Error Code**

### U<sub>0</sub>

# Outdoor Unit LED Display

#### Method of Error Detection

Refrigerant shortage is detected by checking the input current value and the compressor running frequency. If there is insufficient refrigerant, the input current tends to be lower than the normal value.

# **Error Decision Conditions**

The following conditions continue for 7 minutes.

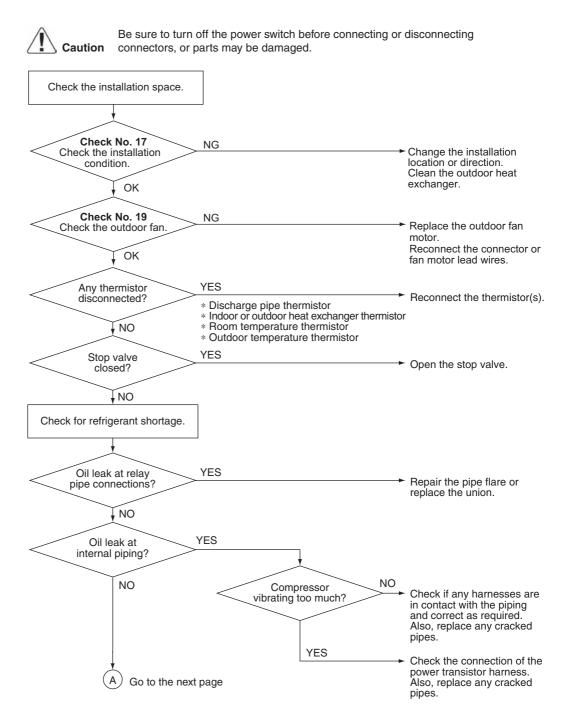

- Input current ≤ A × output frequency + B
- Output frequency > C

A (coefficient)	<b>B</b> (A)	C (Hz)
2500/256	50	40

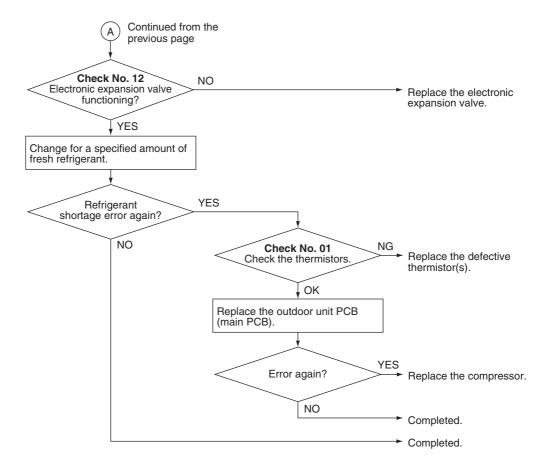

- If the error repeats, the system is shut down.
- Reset condition: Continuous run for about 60 minutes without any other error

## Supposed Causes

- The installation space not large enough
- Dirty outdoor heat exchanger
- Defective outdoor fan motor
- Disconnection of the discharge pipe thermistor, indoor or outdoor heat exchanger thermistor, room or outdoor temperature thermistor
- Closed stop valve
- Refrigerant shortage (refrigerant leakage)
- Poor compression performance of compressor
- Defective electronic expansion valve

### 7.2 Low-voltage Detection or Over-voltage Detection

#### **Error Code**

### U2

# Outdoor Unit LED Display

A ♠ 1 ♠ 2 ● 3 ● 4 ♠ 5 ●

# Method of Error Detection

#### **■** Indoor Unit

The zero-cross detection of the power supply is evaluated by the indoor unit PCB.

#### **■** Outdoor Unit

#### Low-voltage detection:

An abnormal voltage drop is detected by the DC voltage detection circuit.

#### Over-voltage detection:

An abnormal voltage rise is detected by the over-voltage detection circuit.

### Error Decision Conditions

#### **■** Indoor Unit

There is no zero-cross detection in approximately 10 seconds.

#### ■ Outdoor Unit

#### Low-voltage detection:

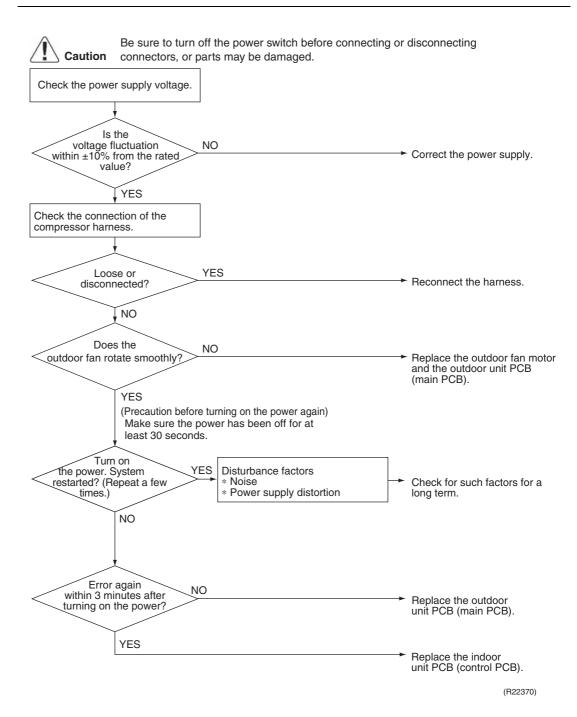

- The voltage detected by the DC voltage detection circuit is below 180 V for 0.1 second.
- If the error repeats, the system is shut down.
- Reset condition: Continuous run for about 60 minutes without any other error

#### Over-voltage detection:

- An over-voltage signal is fed from the over-voltage detection circuit to the microcomputer.
- The compressor stops if the error occurs, and restarts automatically after 3-minute standby.

### Supposed Causes

- Power supply voltage out of specification
- Defective DC voltage detection circuit
- Defective over-voltage detection circuit
- Defective PAM control part
- Disconnection of compressor harness
- Short circuit inside the fan motor winding
- Noise
- Momentary drop of voltage
- Momentary power failure
- Defective outdoor unit PCB
- Defective indoor unit PCB

### 7.3 Wiring Error Check Unexecuted

#### **Error Code**

### U3

# Outdoor Unit LED Display

A ♦ 1 ● 2 ♦ 3 ● 4 ● 5 ●

# Method of Error Detection

The system checks if wiring error check is executed after clearing the memory.

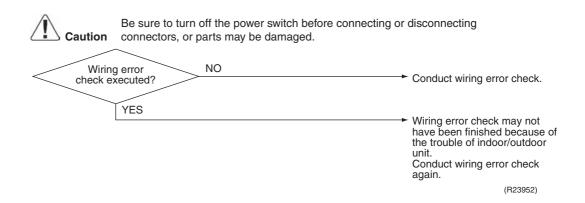

## **Error Decision Conditions**

An error is determined when the unit is operated by the remote controller without executing wiring error check after the memory was cleared.

# Supposed Causes

The wiring error switch (SW3) may have been pressed for 10 seconds or more and the memory may have been deleted. The unit cannot be operated unless wiring error check is executed.

#### **Troubleshooting**

Refer to Wiring Error Check Function on page 249 for details.

# 7.4 Unspecified Voltage (Between Indoor Unit and Outdoor Unit), Anti-icing Control in Other Rooms

#### **Error Code**

### UA, UH

# Outdoor Unit LED Display

A ♦ 1 • 2 • 3 • 4 • 5 •

### Method of Error Detection

A wrong connection is detected by checking the combination of indoor and outdoor units on the microcomputer.

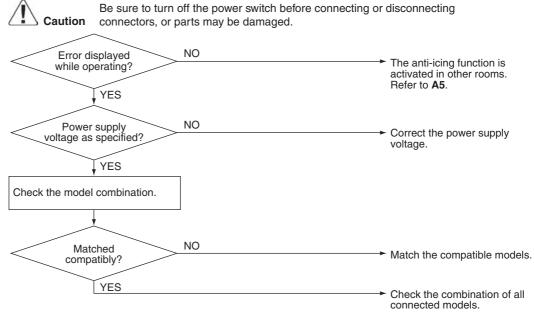

### Error Decision Conditions

- Anti-icing control in other rooms
- Unspecified internal and/or external voltages
- Mismatching of indoor and outdoor units

### Supposed Causes

- Anti-icing function in other rooms
- Power supply voltage out of specification
- Wrong models interconnected
- Wrong indoor unit PCB or outdoor unit PCB mounted

#### **Troubleshooting**

(R21922)

Refer to Anti-icing control for indoor unit on page 202 for details.

### 7.5 Anti-icing Control for Indoor Unit

#### **Error Code**

### **A5**

# Outdoor Unit LED Display

A ⊕ 1 ⊕ 2 ● 3 ⊕ 4 ⊕ 5 ●

#### Method of Error Detection

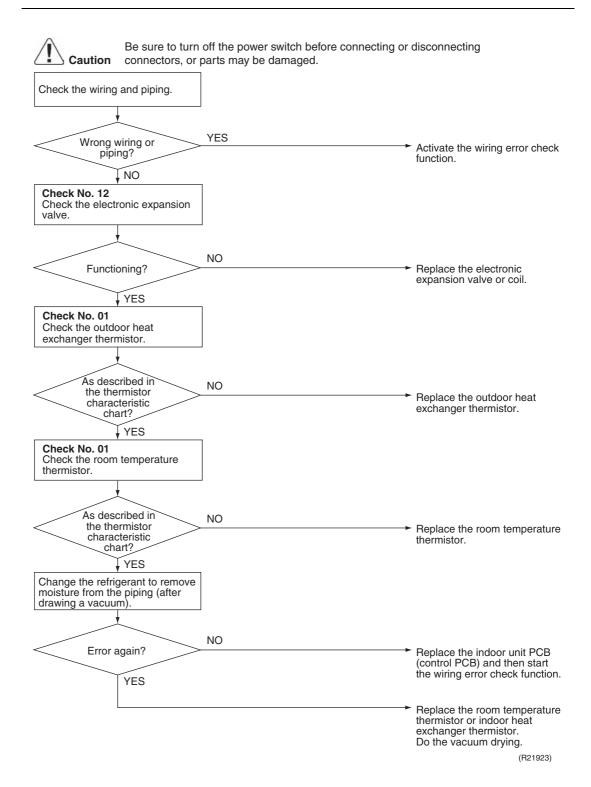

During cooling operation, indoor unit icing is detected by checking the temperatures sensed by the indoor heat exchanger thermistor and room temperature thermistor that are located in a shut-down room.

# **Error Decision Conditions**

- In cooling operation, the both conditions (A) and (B) are met for 5 minutes.
  - (A) Room temperature Indoor heat exchanger temperature ≥ 10°C (18°F)
  - (B) Indoor heat exchanger temperature ≤ -1°C (30.2°F)
- If the error repeats, the system is shut down.
- Reset condition: 3-minute standby is over and the indoor heat exchanger temperature is above 0°C (32°F)

# Supposed Causes

- Wrong wiring or piping
- Defective electronic expansion valve
- Short-circuited air
- Defective indoor heat exchanger thermistor
- Defective room temperature thermistor

### 7.13 High Pressure Control in Cooling

#### **Error Code**

### F6

# Outdoor Unit LED Display

A → 1 → 2 → 3 → 4 → 5 →

### Method of Error Detection

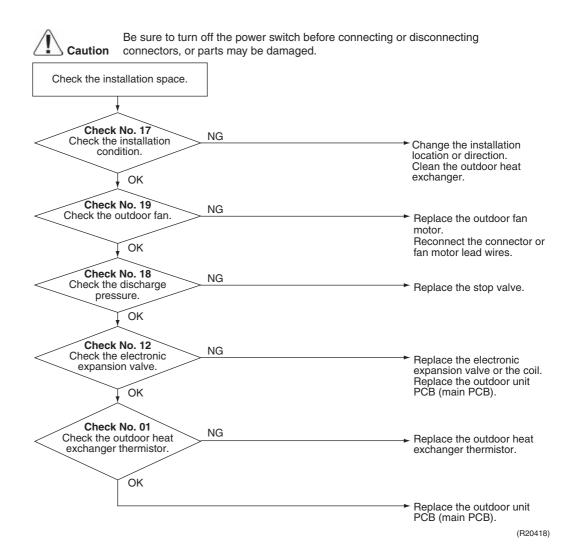

High pressure control (operation halt, frequency drop, etc.) is activated in cooling operation if the temperature sensed by the outdoor heat exchanger thermistor exceeds the limit.

# **Error Decision Conditions**

- The temperature sensed by the outdoor heat exchanger thermistor rises above about 62.5°C (144.5°F).
- The error is cleared when the temperature drops below about 49.5°C (121.1°F).

# Supposed Causes

- The installation space not large enough
- Dirty outdoor heat exchanger
- Defective outdoor fan motor
- Defective stop valve
- Defective electronic expansion valve or coil
- Defective outdoor heat exchanger thermistor
- Defective outdoor unit PCB

## 7.14 Compressor Sensor System Abnormality

**Error Code** 

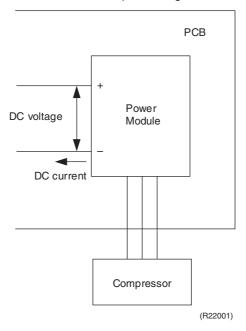

**H0** 

Outdoor Unit LED Display

A ♦ 1 ♦ 2 ♦ 3 ● 4 ● 5 ●

Method of Error Detection

- The system checks the power supply voltage and the DC voltage before the compressor starts.
- The system checks the DC current of the compressor right after the compressor starts.

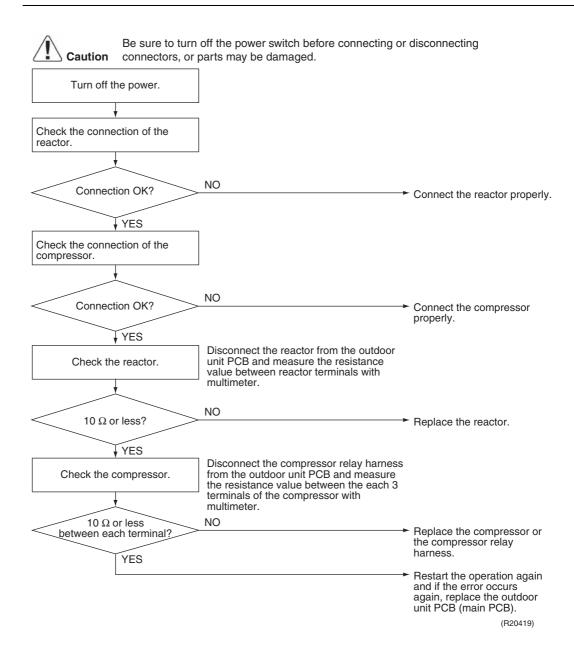

# **Error Decision Conditions**

- The power supply voltage and the DC voltage is obviously low or high.
- The DC current of the compressor does not flow when the compressor starts.

# Supposed Causes

- Disconnection of reactor
- Disconnection of compressor harness
- Defective outdoor unit PCB
- Defective compressor

## 7.15 Position Sensor Abnormality

### **Error Code**

### **H6**

# Outdoor Unit LED Display

### Method of Error Detection

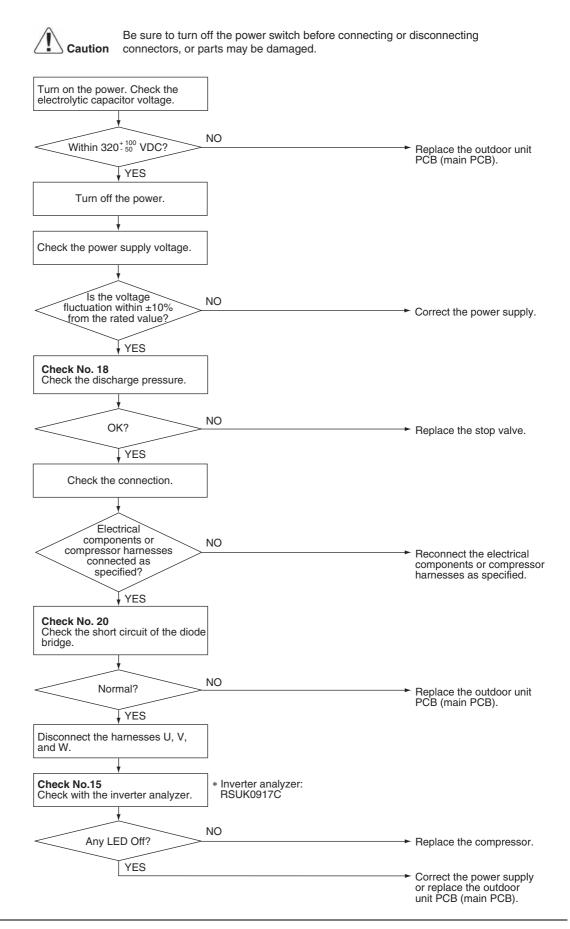

A compressor start-up failure is detected by checking the compressor running condition through the position detection circuit.

# **Error Decision Conditions**

- If the error repeats, the system is shut down.
- Reset condition: Continuous run for about 5 minutes without any other error

# Supposed Causes

- Power supply voltage out of specification
- Disconnection of the compressor harness
- Defective compressor
- Defective outdoor unit PCB
- Start-up failure caused by the closed stop valve
- Input voltage outside the specified range

Reference Check No.15 Refer to P.238

Reference Check No.18 Refer to P.241

### 7.16 Thermistor or Related Abnormality (Outdoor Unit)

**Error Code** 

H9, J3, J6, J8, J9, P4

Outdoor Unit LED Display

Method of Error Detection This fault is identified based on the thermistor input voltage to the microcomputer. A thermistor fault is identified based on the temperature sensed by each thermistor.

# **Error Decision Conditions**

- The voltage between the both ends of the thermistor is above 4.96 V or below 0.04 V with the power on.
- **J3** error is judged if the discharge pipe temperature is lower than the heat exchanger temperature.
- The system is shut down if all the units are judged as the **J8** error.

# Supposed Causes

- Disconnection of the connector for the thermistor
- Defective thermistor(s)
- Defective heat exchanger thermistor in the case of **J3** error (outdoor heat exchanger thermistor in cooling operation, or indoor heat exchanger thermistor in heating operation)
- Defective outdoor unit PCB

#### **Troubleshooting**

#### In case of P4

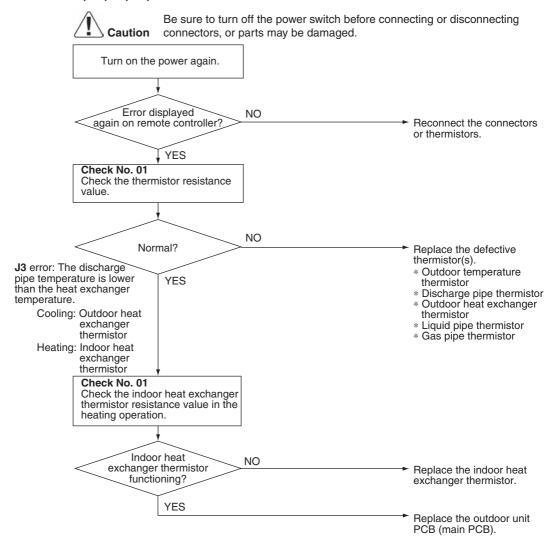

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

Replace the outdoor unit PCB (main PCB).

P4: Radiation fin thermistor

#### In case of H9, J3, J6, J8, J9

(R21118)

H9: Outdoor temperature thermistor

J3: Discharge pipe thermistor

J6: Outdoor heat exchanger thermistor

J8 : Liquid pipe thermistorJ9 : Gas pipe thermistor

When replacing the defective thermistor(s), replace the thermistors as ASSY.

Check No.01 Refer to P.232

### 7.17 Electrical Box Temperature Rise

### **Error Code**

### L3

# Outdoor Unit LED Display

A ♠ 1 ♠ 2 ♠ 3 ● 4 ♠ 5 ●

### Method of Error Detection

An electrical box temperature rise is detected by checking the radiation fin thermistor with the compressor off.

# **Error Decision Conditions**

- With the compressor off, the radiation fin temperature is above **A**.
- The error is cleared when the temperature drops below **B**.

Α	В
70°C (158°F)	60°C (140°F)

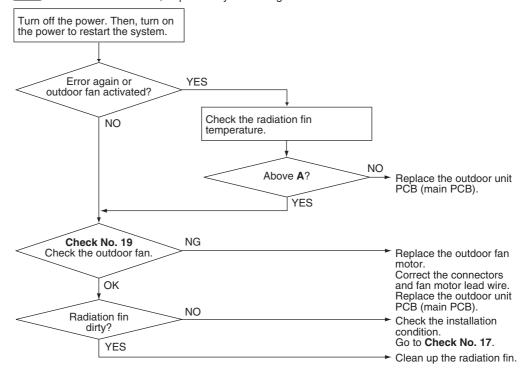

# Supposed Causes

- Defective outdoor fan motor
- Short circuit
- Defective radiation fin thermistor
- Disconnection of connector
- Defective outdoor unit PCB

### **Troubleshooting**

Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged.

### 7.19 Output Overcurrent Detection

### **Error Code**

### L<sub>5</sub>

# Outdoor Unit LED Display

A ♦ 1 ● 2 ● 3 ♦ 4 ● 5 ●

# Method of Error Detection

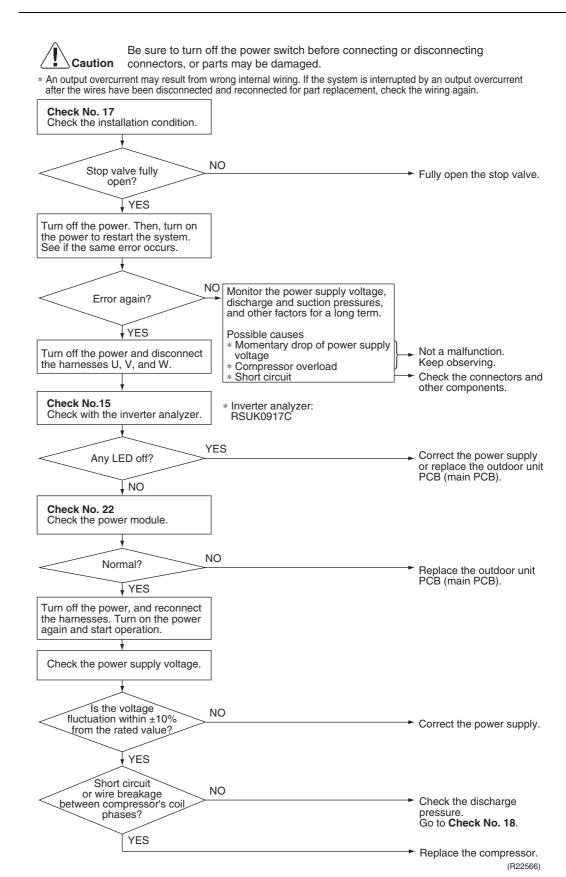

An output overcurrent is detected by checking the current that flows in the inverter DC section.

# **Error Decision Conditions**

- A position signal error occurs while the compressor is running.
- A rotation speed error occurs while the compressor is running.
- An output overcurrent signal is fed from the output overcurrent detection circuit to the microcomputer.
- If the error repeats, the system is shut down.
- Reset condition: Continuous run for about 5 minutes without any other error

# Supposed Causes

- Poor installation condition
- Closed stop valve
- Defective power module
- Wrong internal wiring
- Abnormal power supply voltage
- Defective outdoor unit PCB
- Supply voltage out of specification
- Defective compressor

### 8. Check

### 8.1 Thermistor Resistance Check

#### Check No.01

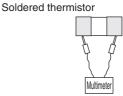

Measure the resistance of each thermistor using multimeter.

The resistance values are defined by below table.

If the measured resistance value does not match the listed value, the thermistor must be replaced.

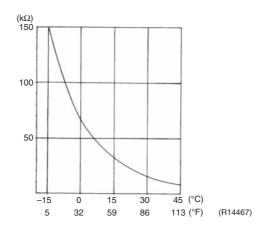

- Disconnect the connector of thermistor ASSY from the PCB to measure the resistance between the pins using multimeter.
- To check the thermistor soldered on a PCB, disconnect the PCB from other PCB/parts, and measure the resistance between the both ends of soldered thermistor.

R6000517

Thermistor temperature		Type A
(°C)	(°F)	R (25°C (77°F)) = 20 kΩ B = 3950 K

### 8.2 Indoor Fan Motor Connector Check

#### Check No.02

### FTXR, CTXG, CTXS, FTXS, FVXS Series

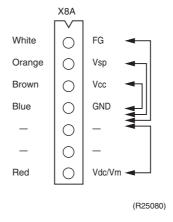

- 1. Check the connection of connector.
- 2. Check motor power supply voltage output (pins 4 7).
- 3. Check motor control voltage (pins 4 3).
- 4. Check rotation command voltage output (pins 4 2).
- 5. Check rotation pulse input (pins 4 1).

#### **FDMQ Series**

- 1. Turn the power supply OFF.
- 2. With the fan motor connector disconnected, measure the resistance between each pin, then make sure that the resistance is more than the value mentioned in the following table.

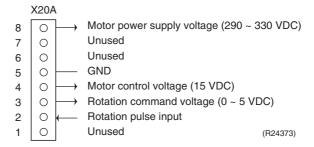

Measuring points	Judgement
White - Blue	1 MΩ or more
Orange - Blue	100 kΩ or more
Brown - Blue	100 Ω or more
Red - Blue	100 kΩ or more

Check SiUS121827E

#### **FFQ Series**

- 1. Check the connection of connector.
- 2. Check motor power supply voltage output (pins 5 8).
- 3. Check motor control voltage (pins 5 4).
- 4. Check rotation command voltage output (pins 5 3).

### 8.3 Hall IC Check

#### Check No.04

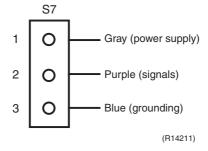

#### FDXS, CDXS Series

- 1. Check the connector connection.
- 2. With the power ON, operation OFF, and the connector connected, check the following.
  - (1) Output voltage of about 5 V between pins 1 and 3.
  - (2) Generation of 3 pulses between pins 2 and 3 when the fan motor is operating.

If NG in step (1)  $\rightarrow$  Defective PCB  $\rightarrow$  Replace the PCB (control PCB).

If NG in step (2)  $\rightarrow$  Defective Hall IC  $\rightarrow$  Replace the fan motor.

If OK in both steps (1) and (2)  $\rightarrow$  Replace the PCB (control PCB).

SiUS121827E Check

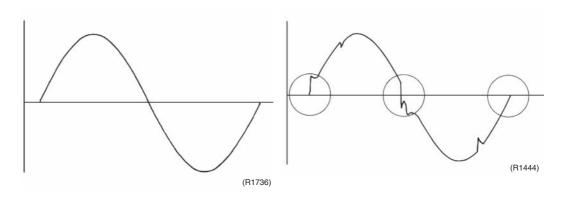

# 8.4 Power Supply Waveform Check

### Check No.11

Measure the power supply waveform between No. 1 and No. 2 on the terminal strip, and check the waveform disturbance.

- Check if the power supply waveform is a sine wave (Fig.1).
- Check if there is waveform disturbance near the zero-cross (sections circled in Fig.2).

[Fig.1] [Fig.2]

Check SiUS121827E

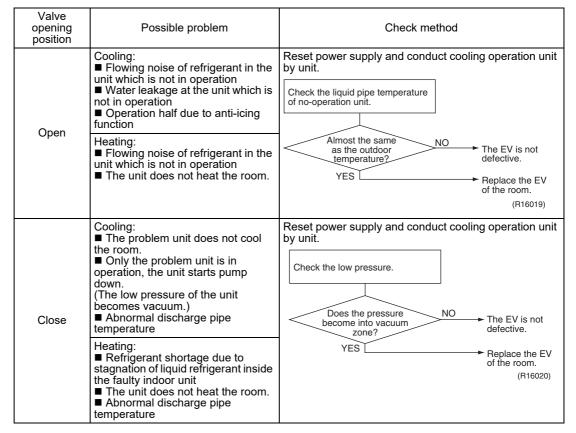

### 8.5 Electronic Expansion Valve Check

#### Check No.12

Conduct the followings to check the electronic expansion valve (EV).

- 1. Check if the EV connector is correctly inserted in the PCB. Match the EV unit number and the connector number.
- 2. Turn the power off and on again, and check if all the EVs generate latching sound.
- 3. If any of the EVs does not generate latching sound in the above step 2, disconnect that connector and check the continuity using a multimeter.
  - Check the continuity between the pins 5 1, 5 2, 5 3, 5 4. If there is no continuity between the pins, the EV coil is faulty.
- 4. If no EV generates a latching sound in the above step 2, the outdoor unit PCB is faulty.
- 5. If the continuity is confirmed in the above step 3, mount a good coil (which generated latching sound) in the EV unit that did not generate a latching sound, and check if that EV generates a latching sound.
  - \* If a latching sound is generated, the outdoor unit PCB is faulty.
  - \* If a latching sound is not generated, the EV unit is faulty.

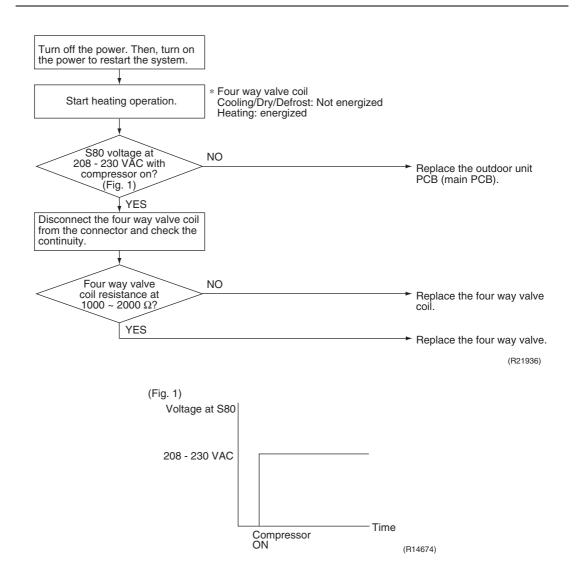

If the system keeps operating with a defective electronic expansion valve, the following problem may occur.

SiUS121827E Check

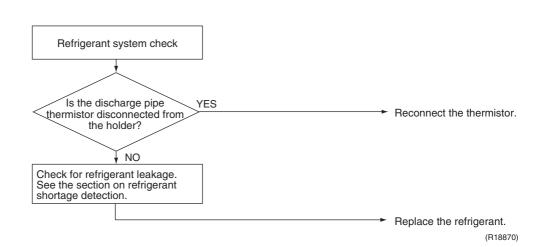

### 8.6 Four Way Valve Performance Check

#### Check No.13

### 8.7 Inverter Unit Refrigerant System Check

#### Check No.14

Check SiUS121827E

### 8.8 Inverter Analyzer Check

#### Check No.15 ■ Characteristics

Inverter analyzer: RSUK0917C

If an abnormal stop occurs due to compressor startup failure or overcurrent output when using an inverter unit, it is difficult to judge whether the stop is caused by the compressor failure or some other failure (main PCB, power module, etc.). The inverter analyzer makes it possible to judge the cause of trouble easily and securely. Connect an inverter analyzer as a quasi-compressor instead of compressor and check the output of the inverter.

#### ■ Operation Method

#### Step 1

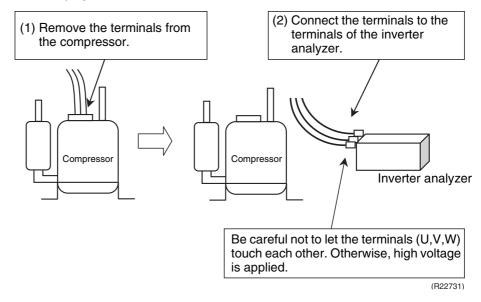

Be sure to turn the power off.

### Step 2

Install an inverter analyzer instead of a compressor.

#### Note:

Make sure the charged voltage of the built-in smoothing electrolytic capacitor drops to 10 VDC or below before carrying out the service work.

#### Reference:

If the terminals of the compressor are not FASTON terminals (difficult to remove the wire on the terminals), it is possible to connect wires available on site to the outdoor unit from output side of PCB. Do not connect them to the compressor at the same time, otherwise it may result in incorrect detection.

#### Step 3

Activate the power transistor test operation from the outdoor unit. Press the forced cooling operation **ON/OFF** switch for 5 seconds. (Refer to page 248 for the position.)

→ Power transistor test operation starts.

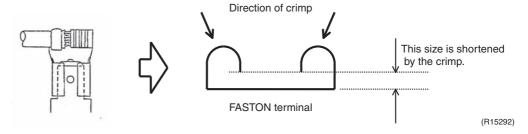

#### ■ Diagnose method (Diagnose according to 6 LEDs lighting status.)

SiUS121827E Check

- 1. If all the LEDs are lit uniformly, the compressor is defective.
  - → Replace the compressor.
- 2. If the LEDs are not lit uniformly, check the power module.
  - $\rightarrow$  Refer to Check No.22.
- If NG in Check No.22, replace the power module.
   (Replace the main PCB. The power module (IPM1) is united with the main PCB.)
   If OK in Check No.22, check if there is any solder cracking on the PCB.
- 4. If any solder cracking is found, replace the PCB or repair the soldered section. If there is no solder cracking, replace the PCB.

- 1. When the output frequency is low, the LEDs blink slowly. As the output frequency increases, the LEDs blink quicker. (The LEDs look like they are lit.)
- 2. On completion of the inverter analyzer diagnosis, be sure to re-crimp the FASTON terminals. Otherwise, the terminals may be burned due to loosening.

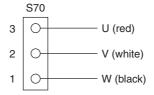

Check SiUS121827E

### 8.9 Rotation Pulse Check on the Outdoor Unit PCB

### **Check No.16**

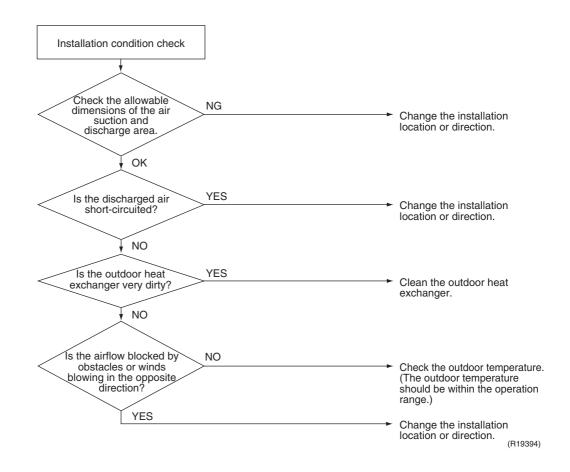

Manually rotate the outdoor fan motor and check if 4 pulses of sinusoidal voltage are detected between pins 1-2 and then pins 2-3.

### **DC** motor

Check SiUS121827E

### 8.13 Main Circuit Short Check

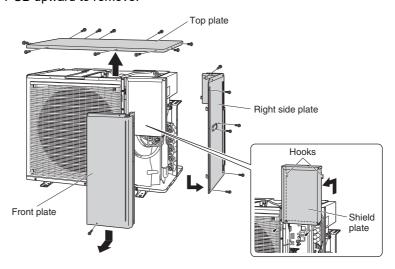

#### Check No.20

Check to make sure that the voltage between (+) and (–) of the diode bridge (DB1) is about 0 V before checking

- Measure the resistance between the pins of the DB1 referring to the table below.
- If the resistance is  $\infty$  or less than 1 k $\Omega$ , short circuit occurs on the main circuit.

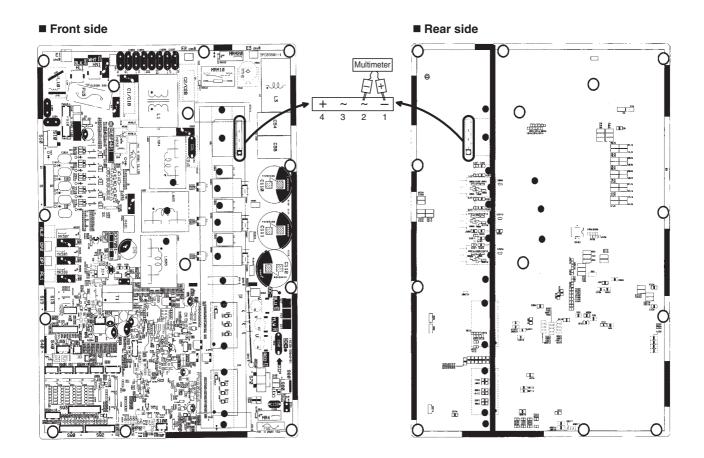

Positive terminal (+) of digital multimeter	~ (2, 3)	+ (4)	~ (2, 3)	- (1)
Negative terminal (–) of digital multimeter	+ (4)	~ (2, 3)	- (1)	~ (2, 3)
Resistance is OK.	several k $\Omega$ ~ several M $\Omega$			
Resistance is NG.	0 Ω or ∞			

- 1. Turn the power off.
- 2. Remove the top plate (10 screws).
- 3. Remove the right side plate (6 screws).
- 4. Remove the front plate (1 screw).
  - The front plate is heavy, so take care.
- 5. Remove the shield plate (2 screws).
- 6. Measure the resistance of the pins under the refrigerant pipe cover.
- 7. In the case it is difficult to insert the probes from the front side, take out the PCB in the following procedure and measure the resistance from the rear side of the PCB.
  - Remove the 3 screws and open the refrigerant cover.
  - Disconnect the connectors.
  - Remove 13 screws of the PCB.
  - Pull the PCB upward to remove.

Pump Down Operation

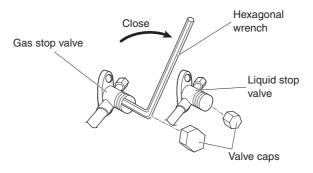

## 1. Pump Down Operation

#### **Outline**

In order to protect the environment, be sure to conduct pump down operation when relocating or disposing of the unit.

#### **Details**

- 1. Remove the valve caps from the liquid stop valve and the gas stop valve.
- 2. Carry out forced cooling operation.
- 3. After 1 2 minutes, close the liquid stop valve with a hexagonal wrench.
- 4. After 3 4 minutes, close the gas stop valve and stop the forced cooling operation.
- 5. Attach the valve cap once procedures are complete.

R7000216

Refer to page 248 for details of forced cooling operation.

## 2. Forced Cooling Operation

#### **Outline**

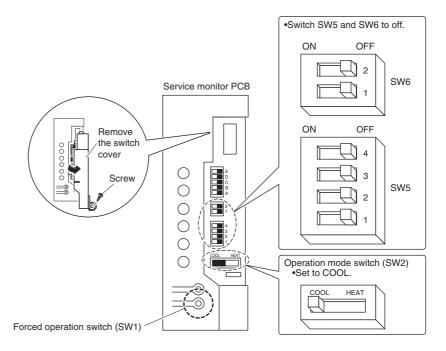

The forced cooling operation is allowed when both the following conditions are met.

- 1. The outdoor unit is not abnormal and not in the 3-minute standby mode.
- 2. The outdoor unit is not operating.

Protection functions have priority over all other functions during forced cooling operation.

#### **Procedure**

- 1. Turn off the power.
- 2. Remove the right side panel (6 screws) and the shield cover (2 screws).
- 3. Remove the cover of service monitor PCB (1 screw).
- 4. Switch SW5 and SW6 to off.
- 5. Turn the operation mode switch (SW2) to COOL.
- 6. Screw the cover of service monitor PCB back on (1 screw).
- 7. Attach the shield cover (2 screws) and the right side panel (6 screws).
- 8. Turn on the power.
- 9. Press the forced operation switch (SW1) above the service monitor PCB cover. (The operation will start.)
  - Forced cooling operation will stop automatically after about 8 minutes. To stop the operation, press the forced operation switch (SW1) again.

R7000217

## 3. Wiring Error Check Function

#### **Outline**

Wiring error check function is designed for the microcomputer to correct wiring errors itself. If local wiring is unclear in the case of buried piping, for example, just press the wiring error check switch on the outdoor unit. Even if the connections for Room A and Room B are confused, the system may run without a hassle.

Note that this check function does not work in the following cases.

- For 3-minute standby period after the power is turned on or after the compressor has stopped.
- When the outdoor temperature is below 5°C (41°F).
- If the indoor unit is in trouble (also in case of all-room transmission failure).

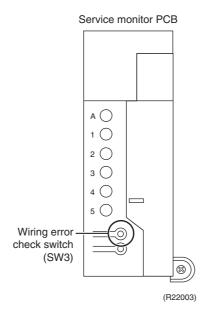

When the piping and wiring are perfect, there is no need to use this function.

#### **Procedure**

- 1. Press the wiring error check switch (SW3) on the service monitor PCB of the outdoor unit, and the wiring error check function is activated.
- 2. In about  $15 \sim 25$  minutes, the check finishes automatically.
- 3. When the check is over, the service monitor LED indicators start blinking.

LED	1	2	3	4	5	Judgment
	Blinking one after another					Self-correction completed
Status	All blinking			inking Self-correction impossible		
	Any of the LEDs stay on				Emergency stop	

- Self-correction complete...The LED indicators 1 5 blink one after another.
- Self-correction impossible...The LED indicators blink all at the same time.
  - Transmission failure occurs at any of the indoor units.
  - The indoor unit heat exchanger thermistor is disconnected.
  - An indoor unit is in trouble (if a trouble occurs during the wiring error checking).
- Emergency stop...If any of the LED indicators stays on, follow the diagnostic procedure.

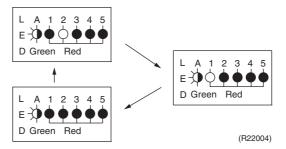

#### **Details**

- Wiring error check is realized by feeding refrigerant one by one through each piping port and detecting indoor heat exchanger temperature with the indoor heat exchanger thermistor in each room to see if the temperature changes in correct order.
- During wiring error check, freezing (cracking) noise may be heard from the indoor unit. This is not a malfunction. The noise is generated by the heat exchanger that is cooled below 0°C (32°F) to make temperature change more visible.
- Indoor fan motor turns on and off during wiring error check.

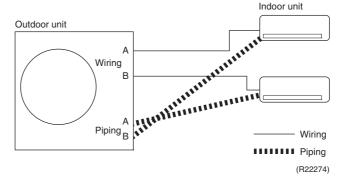

Wiring error check result is indicated using service monitor LEDs when all the checking procedures are completed. LEDs stop blinking when the system returns to the normal operation.

In a multi system with 2 ports (Port A and Port B), LED 1 and LED 2 indicate wiring to Room A and Room B respectively. The LED that blinks first and second indicate piping Port A and Port B respectively.

Ex: Suppose the LED indicators are blinking as follows.

In this example, Port A and wiring to Room B are connected to the same room and Port B and wiring to Room A are connected to another room. Incorrect wiring is then corrected automatically.

- 1. Wrongly connected liquid and gas pipes cannot be self-corrected. Be sure to make the liquid pipe and the gas pipe in pairs.
- To cancel the wiring error check procedure halfway, press the wiring error check switch again.
   In this case, the memory of the microcomputer returns to its initial status (Room A wiring → Port A piping, Room B wiring → Port B piping).
- 3. When replacing the outdoor unit PCB, be sure to use this function.
- 4. Make the priority room setting after wiring error check. If you set the priority room before wiring error check, the prioritized room may be changed after self-correction.

SiUS121827E Trial Operation

## 4. Trial Operation

#### 4.1 RA Indoor Unit

#### **Outline**

Carry out the trial operation in accordance with the operation manual to ensure that all functions and parts, such as flap movement, are working properly.

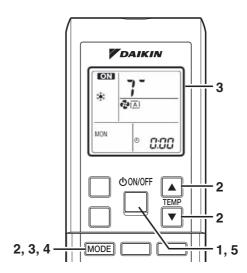

Trial operation should be carried out in either cooling or heating operation.

#### **Procedure**

- 1. Measure the power supply voltage and make sure that it falls within the specified range.
- 2. In cooling operation, select the lowest programmable temperature (18°C (64°F)); in heating operation, select the highest programmable temperature (30°C (86°F)).
- Trial operation may be disabled in either operation mode depending on the room temperature.
- After trial operation is complete, set the temperature to a normal level (26 ~ 28°C (78 ~ 82°F) in cooling, 20 ~ 24°C (68 ~ 75°F) in heating).
- For protection, the system does not start for 3 minutes after it is turned off.

#### **ARC452 Series**

- 1. Press **ON/OFF** button to turn on the system.
- 2. Press both of **TEMP** buttons and **MODE** button at the same time.
- 3. Press MODE button twice.
  - T appears on the display to indicate that trial operation is selected.
- 4. Press **MODE** button and select the operation mode.
- 5. Trial operation terminates in about 30 minutes and switches into normal mode. To quit trial operation, press **ON/OFF** button.

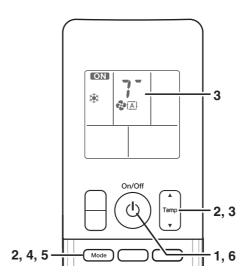

R7000150

Trial Operation SiUS121827E

#### **ARC466 Series**

- 1. Press **On/Off** button to turn on the system.
- 2. Press the center of **Temp** button and **Mode** button at the same time.
- 3. Select ? (trial operation) with **Temp ▲** or **Temp ▼** button.
- 4. Press **Mode** button to start the trial operation.
- 5. Press **Mod**e button and select operation mode.
- 6. Trial operation terminates in about 30 minutes and switches into normal mode. To quit trial operation, press **On/Off** button.

R7000147

#### **Test Items**

Test items	Symptom
Indoor and outdoor units are installed properly on solid bases.	Fall, vibration, noise
No refrigerant gas leaks.	Incomplete cooling/heating function
Refrigerant gas and liquid pipes and indoor drain hose extension are thermally insulated.	Water leakage
Draining line is properly installed.	Water leakage
System is properly grounded.	Electrical leakage
The specified wires are used for inter-unit wiring.	Inoperative or burn damage
Indoor or outdoor unit's air inlet or air outlet has clear path of air. Stop valves are opened.	Incomplete cooling/heating function
Indoor unit properly receives remote controller commands.	Inoperative
The heat pump or cooling only mode is selectable with the DIP switch of the remote controller	Remote controller malfunctioning

The test items above are for CTXS, FTXS series as representative. Refer to the installation manual for the other series.

SiUS121827E Trial Operation

#### 4.2 SA Indoor Unit

#### **Outline**

- Make sure to install the decoration panel before carrying out trial operation if the wireless remote controller is used (FFQ series only).
- Trial operation should be carried out in either cooling or heating operation.
- 1. Measure the supply voltage and make sure that it is within the specified range.
- 2. In cooling operation, select the lowest programmable temperature; in heating operation, select the highest programmable temperature.
- 3. Carry out the trial operation following the instructions in the operation manual to ensure that all functions and parts, such as the movement of the flaps, are working properly.
  - To protect the air conditioner, restart operation is disabled for 3 minutes after the system has been turned off.
- 4. After trial operation is complete, set the temperature to a normal level (26°C to 28°C (78°F to 82°F) in cooling operation, 20°C to 24°C (68°F to 75°F) in heating operation).

When performing field settings or trial operation without attaching the decoration panel, do not touch the drain pump. This may cause electric shock.

After finishing the construction of refrigerant piping, drain piping, and electric wiring, conduct trial operation accordingly to protect the unit (FFQ series only).

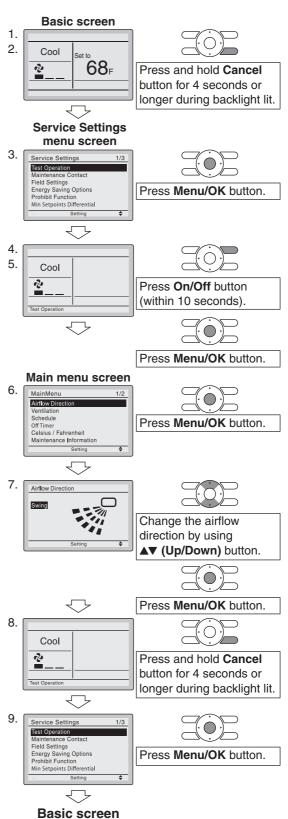

#### **Procedure**

When operating the air conditioner in cooling operation in winter, or heating operation in summer, set it to the trial operation mode using the following method.

Trial Operation SiUS121827E

#### ■ With BRC1E73 Wired Remote Controller

- Set to COOL or HEAT operation using the remote controller.
- Press and hold Cancel button for 4 seconds or longer. Service settings menu is displayed.
- In the case of a model having airflow direction function, select Test Operation in the service settings menu, and press Menu/OK button. Basic screen returns and "Test Operation" is displayed at the bottom.
- 4. Press On/Off button within 10 seconds, and the test operation starts.
  4. Monitor the operation of the indoor unit for a minimum of 10 minutes. During test operation, the indoor unit will continue to cool/heat regardless of the temperature setpoint and room temperature.
  - In the case of above-mentioned procedures 3 and 4 in reverse order, test operation can start as well.
- Press Menu/OK button in the basic screen. Main menu is displayed.
- 6. Select Airflow Direction in the main menu and press Menu/OK button. Check that airflow direction is actuated according to the setting. For operation of airflow direction setting, see the operation manual.
- After the operation of airflow direction is confirmed, press Menu/OK button. Basic screen returns.
- Press and hold **Cancel** button for 4 seconds or longer in the basic screen.
   Service settings menu is displayed.
- 9. Select **Test Operation** in the service settings menu, and press **Menu/OK** button. 9. Basic screen returns and normal operation is conducted.
  - Test operation will stop automatically after 15 ~ 30 minutes. To stop the operation, press On/Off button.
- 10. If the decoration panel has not been installed, turn off the power after the test operation (FFQ series only).

SiUS121827E Trial Operation

#### ■ With BRC082A43, BRC082A41W, BRC082A42W(S) Wireless Remote Controller

- 1. Press button and select the COOL or HEAT operation.
- 2. Press button twice. "TEST" is displayed.
- 3. Press  $\stackrel{\text{\tiny OOM/OFF}}{\text{\tiny (III)}}$  button within 10 seconds, and the test operation starts.

Monitor the operation of the indoor unit for a minimum of 10 minutes. During test operation, the indoor unit will continue to cool/heat regardless of the temperature setpoint and room temperature.

- In the case of above-mentioned procedures (1) and (2) in reverse order, test operation can start as well.
- Test operation will stop automatically after 15 ~ 30 minutes.

To stop the operation, press button.

• Some of the functions cannot be used in the test operation mode.

#### **Test Items**

Test items	Symptoms
Indoor and outdoor units are installed securely.	Fall, vibration, noise
Is the outdoor unit fully installed?	No operation or burn damage
No refrigerant gas leaks.	Incomplete cooling/heating function
Refrigerant gas and liquid pipes and indoor drain hose extension are thermally insulated.	Water leakage
Draining line is properly installed.	Water leakage
Does the power supply voltage correspond to that shown on the name plate?	No operation or burn damage
Only specified wires are used for all wiring, and all wires are connected correctly.	No operation or burn damage
System is properly grounded.	Electrical leakage
Is wiring size according to specifications?	No operation or burn damage
Is something blocking the air outlet or inlet of either the indoor or outdoor units?	Incomplete cooling/heating function
Are refrigerant piping length and additional refrigerant charge noted down?	The refrigerant charge in the system is not clear
Pipes and wires are connected to the corresponding connection ports/terminal blocks for the connected unit.	No cooling/heating
Stop valves are opened.	Incomplete cooling/heating function
Check that the connector of the lead wires of the decoration panel is connected securely.	Louvers do not move
Indoor unit properly receives wireless remote control commands.	No operation

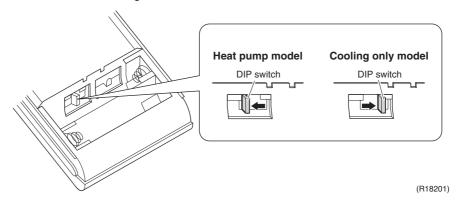

## 5. Field Settings

## 5.1 RA Indoor Unit

## 5.1.1 Model Type Settings

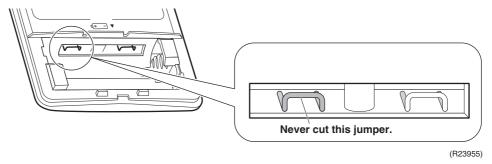

#### ARC452A21, ARC452A23

- The remote controller is common to the heat pump model and cooling only model.
- Make sure the DIP switch is set to the left side. The heating operation will not be available when the DIP switch is set to the right side.

#### ARC466A21, ARC466A36

■ The remote controller is common to the heat pump model and cooling only model.

#### Replace the remote controller if you cut a jumper on the left side.

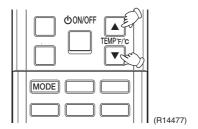

The heating operation will not be available when the jumper on the left side is cut.

## 5.1.2 Temperature Display Switch

You can select Fahrenheit or Celsius for temperature display.

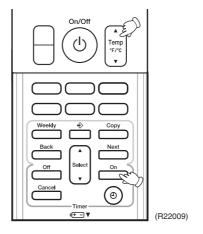

#### ARC452A21, ARC452A23

■ Press **TEMP** ▲ and **TEMP** ▼ buttons at the same time for 5 seconds to change the unit of temperature display.

#### ARC466A21, ARC466A36

■ Press the upper side of **Temp** button and **On** button at the same time for 5 seconds to change the unit of temperature display.

#### 5.1.3 When 2 Units are Installed in 1 Room

#### **Outline**

When 2 indoor units are installed in 1 room, 1 of the 2 indoor units and the corresponding wireless remote controller can be set for different address.

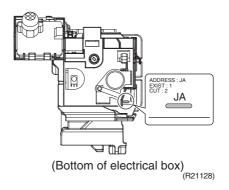

Both the indoor unit PCB and the wireless remote controller need alteration.

The method of address setting varies depending on the type of indoor unit and the series of wired remote controller. Refer to the following pages for the appropriate indoor unit and wireless remote controller.

FTXR, CTXG, CTXS, FTXS Series

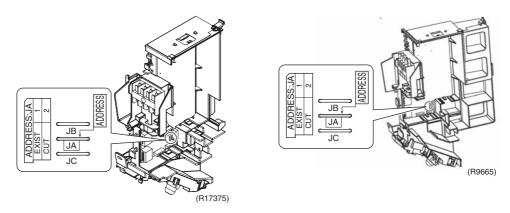

- 1. Remove the front grille.
- 2. Remove the electrical box.
- 3. Remove the shield plate of the electrical box.
- 4. Cut the address setting jumper JA on the PCB.

#### **FTXR, CTXG Series**

#### CTXS07LVJU, FTXS09/12LVJU

#### FTXS15/18/24LVJU

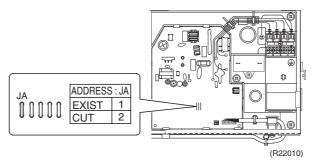

#### Replace the PCB if you cut a jumper unintentionally.

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

#### FDXS, CDXS Series

■ Cut the jumper JA on PCB.

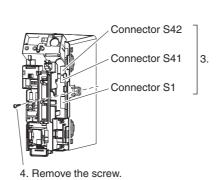

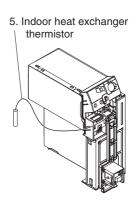

#### Replace the PCB if you cut a jumper unintentionally.

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

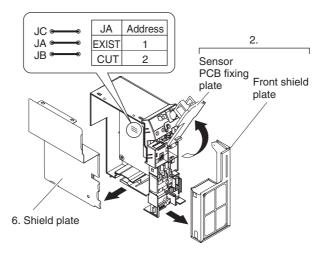

#### **FVXS Series**

- 1. Remove the front grille.
- 2. Lift the sensor PCB fixing plate and remove the front shield plate.
- 3. Disconnect the connectors S1, S41, S42.
- 4. Remove the electric box (1 screw).
- 5. Pull out the indoor heat exchanger thermistor.
- 6. Remove the shield plate (8 tabs).
- 7. Cut the address setting jumper JA on the indoor unit PCB.

R7000179

R7000157

#### Replace the PCB if you cut a jumper unintentionally.

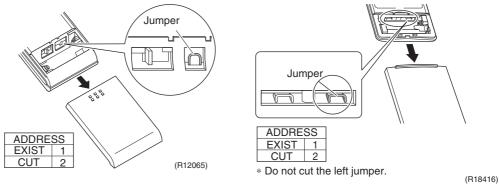

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

## Wireless Remote Controller

- 1. Remove the cover and take it off.
- 2. Cut the address setting jumper.

#### ARC452 series

# ARC466 series

#### Replace the remote controller if you cut a jumper unintentionally.

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

## 5.1.4 Jumper and Switch Settings

#### **FTXR** series

Jumper on indoor unit PCB	Function	When connected (factory setting)	When cut
JB	Fan speed setting when compressor stops for thermostat OFF. (effective only at cooling operation)	The fan stops.	Fan speed setting; Remote controller setting
JC	Power failure recovery function	Auto-restart	The unit does not resume operation after recovering from a power failure. Timer settings are cleared.

#### CTXG, CTXS, FTXS, FDXS, CDXS, FVXS series

Jumper on indoor unit PCB	Function	When connected (factory setting)	When cut
JB	Fan speed setting when compressor stops for thermostat OFF. (effective only at cooling operation)	Fan speed setting; Remote controller setting	The fan stops.
JC	Power failure recovery function	Auto-restart	The unit does not resume operation after recovering from a power failure. Timer settings are cleared.

#### **FVXS** series only

Switch on indoor unit PCB	Function	OFF (factory setting)	ON
SW2-4	Upward airflow limit setting	Exposed or half embedded installation	Set the switch to ON position when you install the indoor unit embedded in the wall to avoid condensation.

For the location of the jumper, refer to the following pages.

FTXR, CTXG: page 37

CTXS07LVJU, FTXS09/12LVJU: page 39

FTXS15/18/24LVJU: page 41 FDXS, CDXS: page 43

FVXS: page 45

## 5.2 SA Indoor Unit

## 5.2.1 How to Change the Field Settings

#### **Outline**

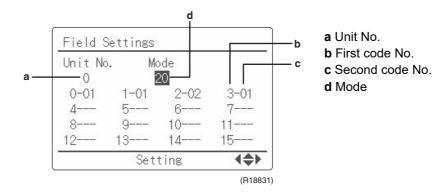

If optional accessories are mounted on the indoor unit, the indoor unit setting may have to be changed. Refer to the instruction manual for each optional accessory.

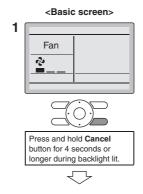

When using 2 remote controllers for 1 indoor unit, change the field settings from MAIN remote controller. Note that the field settings can not be set from SUB remote controller.

#### **Procedure**

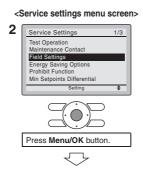

#### **BRC1E73 Wired Remote Controller**

1. Press and hold **Cancel** button for 4 seconds or longer. Service settings menu is displayed.

2. Select Field Settings in the Service Settings menu, and press Menu/OK button. Field settings screen is displayed.

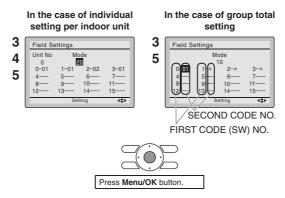

R7000213

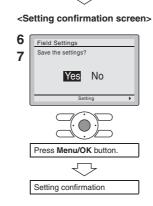

- 3. Highlight the mode, and select desired "Mode No." by using ▲ ▼ (Up/Down) button.
- 5. Highlight SECOND CODE NO. of the FIRST CODE NO. to be changed, and select desired "SECOND CODE NO." by using ▲ ▼ (Up/Down) button. Multiple identical mode number settings are available.

In the case of setting for all indoor units in the remote control group, available SECOND CODE NO. is displayed as " \* " which means it can be changed. When SECOND CODE NO. is displayed as " - ", there is no function.

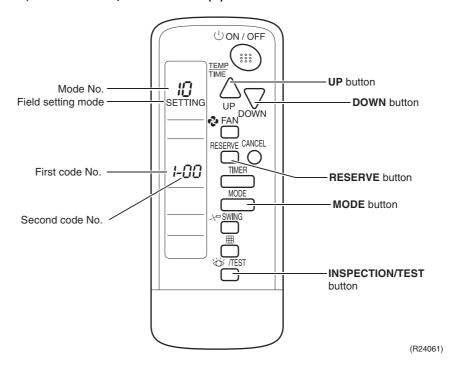

- 6. Press Menu/OK button. Setting confirmation screen is displayed.
- 7. Select Yes and press Menu/OK button. Setting details are determined and field settings screen returns.
- 8. In the case of multiple setting changes, repeat 3 to 7.
- 9. After all setting changes are completed, press Cancel button twice.
- 10. Backlight goes out, and [Checking the connection. Please stand by.] is displayed for initialization. After the initialization, the basic screen returns.

R7000214

#### BRC082A43, BRC082A41W, BRC082A42W(S) Wireless Remote Controller

To set the field settings, you have to change:

- Mode No.
- First code No.
- Second code No.
- 1. When in normal mode, hold down \infty/TEST button for at least 4 seconds to enter the Field Set mode.
- 2. Select the desired Mode No. with MODE button.
- 3. Press button and select the First code No.
- 4. Press button and select the Second code No.
- 5. Press **RESERVE** button to confirm the settings.
- 6. Press 🍪/TEST button to quit the Field Set mode and to return to normal display again.

## 5.2.2 Overview of Field Settings for FFQ Series

Mode	First	5		Second Code No.						
No.	Code No.	Description of setting	01	01 02		04	05	06		
10	0	Filter cleaning sign interval Longlife filter	Approx. 2,500 hrs.	Approx. 1,250 hrs.	_	_	_	_		
(20)	2	Remote controller thermistor	Enabled	Disabled★	_	_	_	_		
	3	Filter cleaning sign	Display★ No display		_	_	_	_		
12 (22)	0	Optional accessories output selection (field selection of output for adaptor for wiring)	Compressor★	_	Operation output	Error output	Outdoor air intake	Presence sensor		
	0	High air outlet velocity (for high ceiling applications)	≤ 2.7 m★ (≤ 8-7/8 ft)	2.7 ~ 3.0 m (8-7/8~9-13/16 ft)	3.0 ~ 3.5 m (9-13/16~11-1/2 ft)	_	_	_		
13 (23)	1	Selection of airflow direction (setting for when a blocking pad kit has been installed)	4-way flow★	3-way flow	2-way flow	_	_	_		
	4	Airflow direction range setting	Upper	Normal★	Lower	_	_	_		
15 (25)	3	Drain pump operation with humidifying	Not equipped★	Equipped	_	_	_	_		

★ Factory Setting

Note(s)

Any function that is not available on the indoor unit us not displayed.

## 5.2.3 Overview of Field Settings for FDMQ Series

Mode	Mode First			Second Code No.							
No.	Code No.	Description of	of setting		01		02	03	04	05	06
	Filter cleaning sign interval (used to change filter cleaning display interval according to filter contamination)	Longlife filter	±	Approx. 2,500 hrs.		Approx. 1,250 hrs.	_	_	_	_	
		Standard filter	Light⊁	Approx. 200 hrs.	Heavy	Approx. 100 hrs.	_	_	_	_	
	3	Filter cleaning sign (used to set filter cleaning display ON/ OFF)		D	isplay★	N	o display	_	_	_	_
11 (21)	7	Air volume adjustment		OFF★ a		ac	r volume ljustment mpletion	Air volume adjustment start	_	_	_
13 (23)	6	External static pressure		Ref	Refer to the table below.						

★ Factory Setting

- The Second Code No. is factory set to "01".
- Do not use any settings not listed in the table.
- For group control with a wireless remote controller, initial settings for all the indoor units of the group are equal.

For group control, refer to the installation manual attached to the indoor unit for group control.

#### **External Static Pressure Settings**

Mode	First	Second (	Code No.	
No.	( Ode   00/40   45/40/04		External static pressure	
		03	_	30 Pa (0.12 inH <sub>2</sub> O)
		04	_	40 Pa (0.16 inH <sub>2</sub> O)
		05 ★	05 ★	50 Pa (0.20 inH <sub>2</sub> O) ★
		06	06	60 Pa (0.24 inH <sub>2</sub> O)
		07	07	70 Pa (0.28 inH <sub>2</sub> O)
		08	08	80 Pa (0.32 inH <sub>2</sub> O)
13 (23)	6	09	09	90 Pa (0.36 inH <sub>2</sub> O)
(=0)		10	10	100 Pa (0.40 inH <sub>2</sub> O)
		11	11	110 Pa (0.44 inH <sub>2</sub> O)
		12	12	120 Pa (0.48 inH <sub>2</sub> O)
		13	13	130 Pa (0.52 inH <sub>2</sub> O)
		14	14	140 Pa (0.56 inH <sub>2</sub> O)
		15	15	150 Pa (0.60 inH <sub>2</sub> O)

★ Factory Setting

#### 5.2.4 MAIN/SUB Setting when Using 2 Wired Remote Controllers

#### **Outline**

The MAIN/SUB setting is necessary when 1 indoor unit is controlled by 2 remote controllers. When you use 2 remote controllers, set one to MAIN and the other to SUB.

**Details** 

1. The following message is displayed after power-on.

Checking the connection.

Please stand by.

When the above message is displayed, the backlight will not be ON.

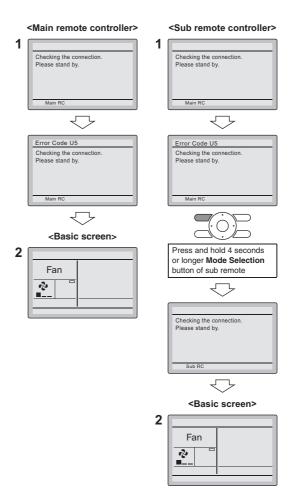

[In the case that 1 indoor unit is controlled by 2 remote controllers:]

Make sure to set the sub remote controller when the above message is displayed.

Hold Mode button for 4 seconds or longer to set.

When the display is changed from "Main RC" to "Sub RC", the setting is completed.

2. Basic screen is displayed.

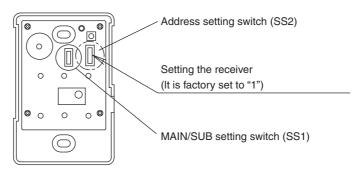

# 5.2.5 MAIN/SUB and Address Setting for Wireless Remote Controller for FDMQ Series

#### **Outline**

- If setting multiple wireless remote controllers to operate in one room, perform address setting for the receiver and the wireless remote controller.
- If using both a wired remote controller and a wireless remote controller with 1 indoor unit, change the MAIN/SUB switch of the signal receiver PCB.

## Signal Receiver PCB Setting

(R24951)

#### MAIN/SUB switch

Set the MAIN/SUB setting switch (SS1) on the signal receiver PCB to SUB.

	MAIN	SUB
MAIN/SUB setting switch (SS1)	■ M S	<b>™</b> S
	R7000181	R7000182

#### Wireless address switch

Set the address setting switch (SS2) on the signal receiver PCB according to the table below.

	No.1	No.2	No.3
Address setting switch (SS2)			
	1 2 3	1 2 3	1 2 3
	R7000183	R7000184	R7000185

#### Wireless Remote Controller Address

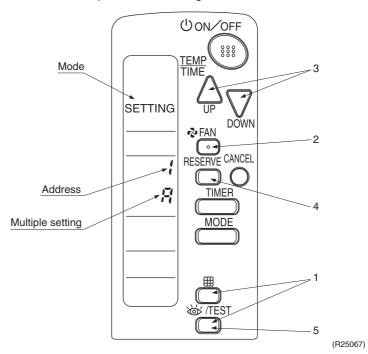

Factory set is 1. Change the wireless remote controller address setting by the following steps, if necessary.

1. Hold down ⊞ button and ₭ /TEST button at the same time for at least 4 seconds to enter the field setting mode. (SETTING is indicated on the display).

- 2. Press **P**FAN button and select display setting (g or b). Each time the button is pressed, the display switches between g and b.
- 3. Press ⊕button and ¬¬button to set the address.

Address can be set from  $1 \sim 6$ , but set it to  $1 \sim 3$  and to same address as the receiver. The receiver does not work with address  $4 \sim 6$ .

- 4. Press **RESERVE** button to confirm the setting.
- 5. Hold down \igotimity/TEST button to quit the field setting mode and return to the normal display.

## Multiple Settings

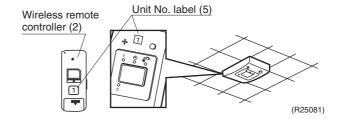

g or 8

When the indoor unit is controlled by an outside controller (central remote controller, etc.), the indoor unit sometimes does not respond to ON/OFF command or temperature setting command from the wireless remote controller. Check what setting the customer needs and make the multiple setting as shown below.

Remote (	Controller	Indoor Unit		
Multiple settings	Remote controller display	To control other air conditions and units	For other than on left	
g: Standard	All items displayed.	Commands other than ON/OFF and temperature setting accepted. (1 LONG BEEP or 3 SHORT BEEPS emitted)	All commands accepted. (2 SHORT BEEPS)	
ե: Multi System	Operations remain displayed shortly after execution	All commands accepte	d. (2 SHORT BEEPS)	

#### **After Setting**

Stick the Unit No. label on the receiver and the back of the wireless remote controller.

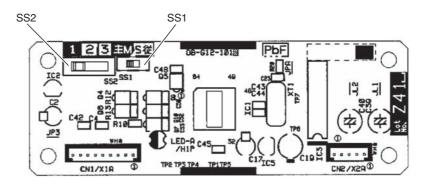

Set the Unit No. of the receiver and the wireless remote controller to be the equal. If the settings differ, the signal from the remote controller cannot be transmitted.

# 5.2.6 MAIN/SUB and Address Setting for Wireless Remote Controller for FFQ Series

#### **Outline**

- If setting multiple wireless remote controllers to operate in one room, perform address setting for the receiver and the wireless remote controller.
- If using both a wired remote controller and a wireless remote controller with 1 indoor unit, change the MAIN/SUB switch of the transmitter board.

## Transmitter Board

(R24374)

#### MAIN/SUB switch

When using both a wired and a wireless remote controller for 1 indoor unit, the wired controller should be set to MAIN. Therefore, set the MAIN/SUB switch (SS1) of the transmitter board to SUB.

	MAIN	SUB
MAIN/SUB setting switch (SS1)	■ ≤	≤ ∽ (R24063)

#### Wireless address switch

Set the wireless address setting switch (SS2) on the transmitter board according to the table below.

Unit No.	No.1	No.2	No.3
Address setting switch (SS2)	ν ω (S1935)	□ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □	ω ω (S1937)

#### Wireless Remote Controller Address

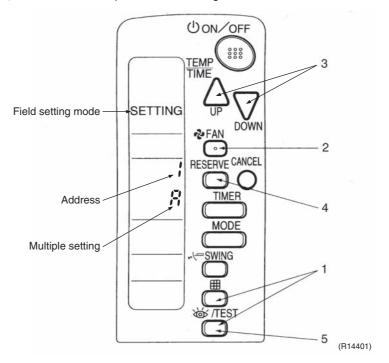

Factory set is 1. Change the wireless remote controller address setting by the following steps, if necessary.

Hold down button and frest button at the same time for at least 4 seconds to enter the field setting mode. (SETTING is indicated on the display).
 Press FAN button and select display setting (β or b). Each time the button is pressed, the display switches between β and b.

2. Press ⊕button and ⊕button to set the address.

Address can be set from  $1 \sim 6$ , but set it to  $1 \sim 3$  and to same address as the transmitter board. The transmitter board does not work with address  $4 \sim 6$ .

- 3. Press **RESERVE** button to confirm the setting.
- 4. Hold down \sigmi/TEST button to quit the field setting mode and return to the normal display.

## Multiple Settings

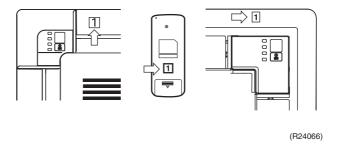

g or a

When the indoor unit is controlled by an outside controller (central remote controller, etc.), the indoor unit sometimes does not respond to ON/OFF command or temperature setting command from the wireless remote controller. Check what setting the customer needs and make the multiple setting as shown below.

Remote (	Controller	Indoor Unit			
Multiple settings	Remote controller display	To control other air conditions and units	For other than on left		
g: Standard	All items displayed.	Commands other than ON/OFF and temperature setting accepted. (1 LONG BEEP or 3 SHORT BEEPS emitted)	All commands accepted. (2 SHORT BEEPS)		
ե: Multi System	Multi System Operations remain displayed shortly after execution		All commands accepted. (2 SHORT BEEPS)		

#### **After Setting**

Affix corresponding unit number labels onto both air outlet of the decoration panel and onto back of the wireless remote controller.

Set the Unit No. of the receiver and the wireless remote controller to be the equal. If the settings differ, the signal from the remote controller cannot be transmitted.

#### 5.3 Outdoor Unit

#### 5.3.1 Priority Room Setting

#### **Outline**

The indoor unit for which priority room setting is applied takes priority in the following cases.

Operation mode priority

The operation mode of the prioritized room takes precedence. For example, when the prioritized indoor unit starts cooling operation, the other indoor units which have been in heating operation enter the standby mode. Heating operation will resume if the prioritized indoor unit stops cooling operation.

■ Priority during POWERFUL operation

The electronic expansion valves are controlled to provide more capacity to the prioritized room and the capacities for the other indoor units will be slightly reduced.

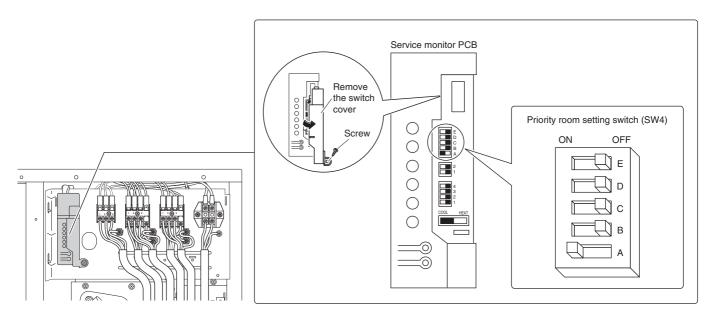

■ OUTDOOR UNIT QUIET operation priority

When the OUTDOOR UNIT QUIET operation is selected in the prioritized room, the outdoor unit runs quietly.

Without priority room setting, OUTDOOR UNIT QUIET operation starts only when the function is set for all the operating indoor units.

#### **Procedure**

- 1. Turn the circuit breaker off before changing the setting.
- 2. Turn on the one of the switches of the SW4 on the service monitor PCB. Only one room can be set as the priority room.
- 3. Turn the power on.

R7000218

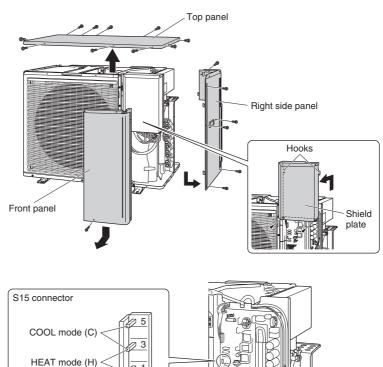

#### 5.3.2 COOL/HEAT Mode Lock

Use the S15 connector to set the unit to cooling only or heating only. Setting to heating only (H): short-circuit the pins 1 and 3 of the connector S15. Setting to cooling only (C): short-circuit the pins 3 and 5 of the connector S15.

The following specifications apply to the connector housing and pins.

■ JST products:

Housing: VHR-5N Pin: SVH-21T-1, 1

R7000163

Note(s

Forced operation is also possible in cooling/heating mode

#### 5.3.3 NIGHT QUIET Mode

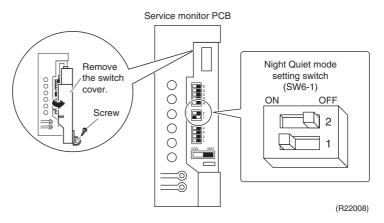

#### **Outline**

If NIGHT QUIET mode is to be used, initial settings must be made when the unit is installed. Explain the function of NIGHT QUIET mode, as described below, to the customer, and confirm whether or not the customer wants to use NIGHT QUIET mode.

NIGHT QUIET mode function reduces operating noise of the outdoor unit at nighttime. This function is useful if the customer is worried about the effects of the operating noise on the neighbors. However, if NIGHT QUIET mode is running, cooling capacity is reduced.

#### **Procedure**

Turn on the SW6-1 on the service monitor PCB of the outdoor unit.

## 6. Silicone Grease on Power Transistor/Diode Bridge

#### **Outline**

Apply the specified silicone grease to the heat radiation part of a power transistor/diode bridge when you replace an outdoor unit PCB. The silicone grease encourages the heat radiation of a power transistor/diode bridge.

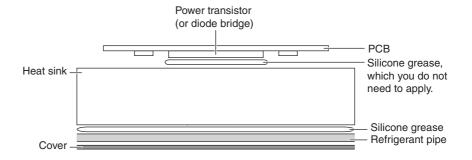

#### **Details**

- 1. Wipe off the old silicone grease on the refrigerant pipe completely.
- 2. Apply the silicone grease on the heat sink evenly. See the illustrations below for examples of application.
- 3. Tighten the screws of cover.
- 4. Make sure that the heat radiation parts are firmly contacted to refrigerant pipe.

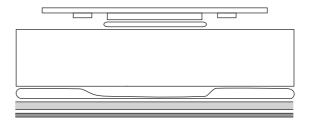

Smoke emission may be caused by bad heat radiation when the silicone grease is not appropriately applied.

OK: Evenly applied

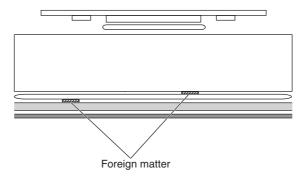

R7000168

NG: Not evenly applied

R7000158

■ NG: Foreign matter is stuck.
